Underground Utilities Legend

UNDERGROUND UTILITY SURVEY NOTES:
This survey has been carried out to the minimum, as described by The Survey Specification (SS1) for a Level 4 Survey (PAS128 Type B). Utilities on this drawing have been detected using non invasive locator equipment. The performance of these techniques can be adversely affected by ground conditions and this can result in false signals and missed targets. Consequently some utilities may be undetectable and therefore, whilst Brunel Surveys takes best endeavours to detect all utilities we cannot guarantee 100% detection or always be correct.
Irrespective of the information provided by a utility survey and statutory plans, any groundworks should be undertaken with extreme caution and in accordance with health and safety regulations. Utilities may be anywhere within the area of the survey and should be treated as live until proven otherwise.
