(b) is technically, environmentally and economically practicable.
14.— Duty in relation to collected waste

(1) An establishment or undertaking which collects, transports or receives waste paper, metal, plastic or glass must, from 1st January 2015, take all such measures available to it in that capacity as are reasonable in the circumstances to ensure that where that waste has been separately collected it is not mixed with other waste or other material with different properties.

Waste prevention programmes and waste management plans

Regulations 5, 8 and 11

---

PART 1

Objectives
1. Overall objective
To protect the environment and human health by preventing or reducing the adverse impacts of the generation and management of waste and by reducing overall impacts of resource use and improving the efficiency of such use.

Commencement
Sch. 1(1) para. 1: March 29, 2011 (SI 2011/988 Pt 1 reg. 1(2))

Extent
Sch. 1(1) para. 1: England, Wales

2.— Application of the waste hierarchy
(1) To apply the following waste hierarchy as a priority order in waste prevention and management policy—
   (a) prevention;
   (b) preparing for re-use;
   (c) recycling;
   (d) other recovery (for example energy recovery);
   (e) disposal.

(2) When applying the waste hierarchy in sub-paragraph (1), the appropriate authority must ensure that it—
   (a) encourages the options that deliver the best overall environmental outcome, which may require specific waste streams to depart from the hierarchy where this is justified by life-cycle thinking on the overall impacts of the generation and management of such waste;
   (b) takes into account—
      (i) the general environmental protection principles of precaution and sustainability,
      (ii) technical feasibility and economic viability,
      (iii) protection of resources, and
      (iv) the overall environmental, human health, economic and social impacts.

Commencement
Sch. 1(1) para. 2(1)-(2)(b)(iv): March 29, 2011 (SI 2011/988 Pt 1 reg. 1(2))

Extent

3. Protection of human health and the environment

To ensure that waste management is carried out without endangering human health, without harming the environment and, in particular—

(a) without risk to water, air, soil, plants or animals;
(b) without causing a nuisance through noise or odours; and
(c) without adversely affecting the countryside or places of special interest.

Commencement

Sch. 1(1) para. 3(a)-(c): March 29, 2011 (SI 2011/988 Pt 1 reg. 1(2))

Extent

4.— Principles of self-sufficiency and proximity

(1) To establish an integrated and adequate network of waste disposal installations and of installations for the recovery of mixed municipal waste collected from private households, including, where such collection also covers such waste from other producers, taking into account best available techniques.

(2) The network must be designed to enable the European Union as a whole to become self-sufficient in waste disposal and in the recovery of mixed municipal waste collected from private households, and to enable the United Kingdom to move towards that aim taking into account geographical circumstances or the need for specialised installations for certain types of waste.

(3) The network must enable waste to be disposed of and mixed municipal waste collected from private households to be recovered in one of the nearest appropriate installations, by means of the most appropriate technologies, in order to ensure a high level of protection for the environment and human health.

(4) This paragraph does not require that the full range of final recovery facilities be located in England or in Wales or in England and Wales together.

Commencement

Sch. 1(1) para. 4(1)-(4): March 29, 2011 (SI 2011/988 Pt 1 reg. 1(2))

Regulation 3
Properties of waste which render it hazardous

H1 “Explosive”: substances and preparations which may explode under the effect of flame or which are more sensitive to shocks or friction than dinitrobenzene.
“Oxidizing”: substances and preparations which exhibit highly exothermic reactions when in contact with other substances, particularly flammable substances.

**H3-A**  “Highly flammable”
- liquid substances and preparations having a flash point below 21°C (including extremely flammable liquids), or
- substances and preparations which may become hot and finally catch fire in contact with air at ambient temperature without any application of energy, or
- solid substances and preparations which may readily catch fire after brief contact with a source of ignition and which continue to burn or be consumed after removal of the source of ignition, or
- gaseous substances and preparations which are flammable in air at normal pressure, or
- substances and preparations which, in contact with water or damp air, evolve highly flammable gases in dangerous quantities.

**H3-B**  “Flammable”: liquid substances and preparations having a flash point equal to or greater than 21°C and less than or equal to 55°C.

**H4**  “Irritant”: non-corrosive substances and preparations which, through immediate, prolonged or repeated contact with the skin or mucous membrane, can cause inflammation.

**H5**  “Harmful”: substances and preparations which, if they are inhaled or ingested or if they penetrate the skin, may involve limited health risks.

**H6**  “Toxic”: substances and preparations (including very toxic substances and preparations) which, if they are inhaled or ingested or if they penetrate the skin, may involve serious, acute or chronic health risks and even death.

**H7**  “Carcinogenic”: substances and preparations which, if they are inhaled or ingested or if they penetrate the skin, may induce cancer or increase its incidence.

**H8**  “Corrosive”: substances and preparations which may destroy living tissue on contact.

**H9**  “Infectious”: substances and preparations containing viable micro-organisms or their toxins which are known or reliably believed to cause disease in man or other living organisms.

**H10**  “Toxic for reproduction”: substances and preparations which, if they are inhaled or ingested or if they penetrate the skin, may induce non-hereditary congenital malformations or increase their incidence.

**H11**  “Mutagenic”: substances and preparations which, if they are inhaled or ingested or if they penetrate the skin, may induce hereditary genetic defects or increase their incidence.

**H12**  Waste which releases toxic or very toxic gases in contact with water, air or an acid.

**H13**(*)  “Sensitizing”: substances and preparations which, if they are inhaled or if they penetrate the skin, are capable of eliciting a reaction of hypersensitization such that on further exposure to the substance or preparation, characteristic adverse effects are produced.

(*) As far as testing methods are available.

**H14**  “Ecotoxic”: waste which presents or may present immediate or delayed risks for one or more sectors of the environment.

**H15**  Waste capable by any means, after disposal, of yielding another substance, e.g. a leachate, which possesses any of the characteristics above.

**Notes**

and administrative provisions of the Member States relating to the classification, packaging and labelling of dangerous preparations shall apply.

Test methods

The methods to be used are described in Annex V to Directive 67/548/EEC and in other relevant CEN-notes.”
