

Outstrays to Skeffling Managed Realignment

The **Outstrays to Skeffling Managed Realignment Scheme (OtSMRS)** is a joint venture by the Environment Agency and Associated British Ports (ABP) to realign existing flood embankments and create approximately 225 hectares of new mudflat, saltmarsh, and wet grassland habitat on the north bank of the Humber estuary, near Skeffling.

It will provide the required compensatory habitat to replace losses at designated sites from sea level rise, and for direct losses resulting from development.
