

Area Number	Size (ha)	Total Score	Distance from the mine water discharge point to the potential treatment site (closest site boundary to discharge point)	Access to the potential treatment site (site boundary distance from potential access)	Pumping costs and carbon footprint (site elevation from the site centre)	Closeness to housing & businesses	Caplecleugh only Size (ha)	Route of the pipeline to transfer the mine water to the potential treatment site and from the potential treatment site to a nearby water course. (Length of pipeline)	Degree of slope	Ecological constraints	Visual impact	Flood risk (surface water flooding)	Current and previous land use - ease of construction
