

# Preston New Road Groundwater Monitoring Data Q4 2018

The following report includes Cuadrilla's quarterly groundwater monitoring data for Q4 2018 (October - December 2018).

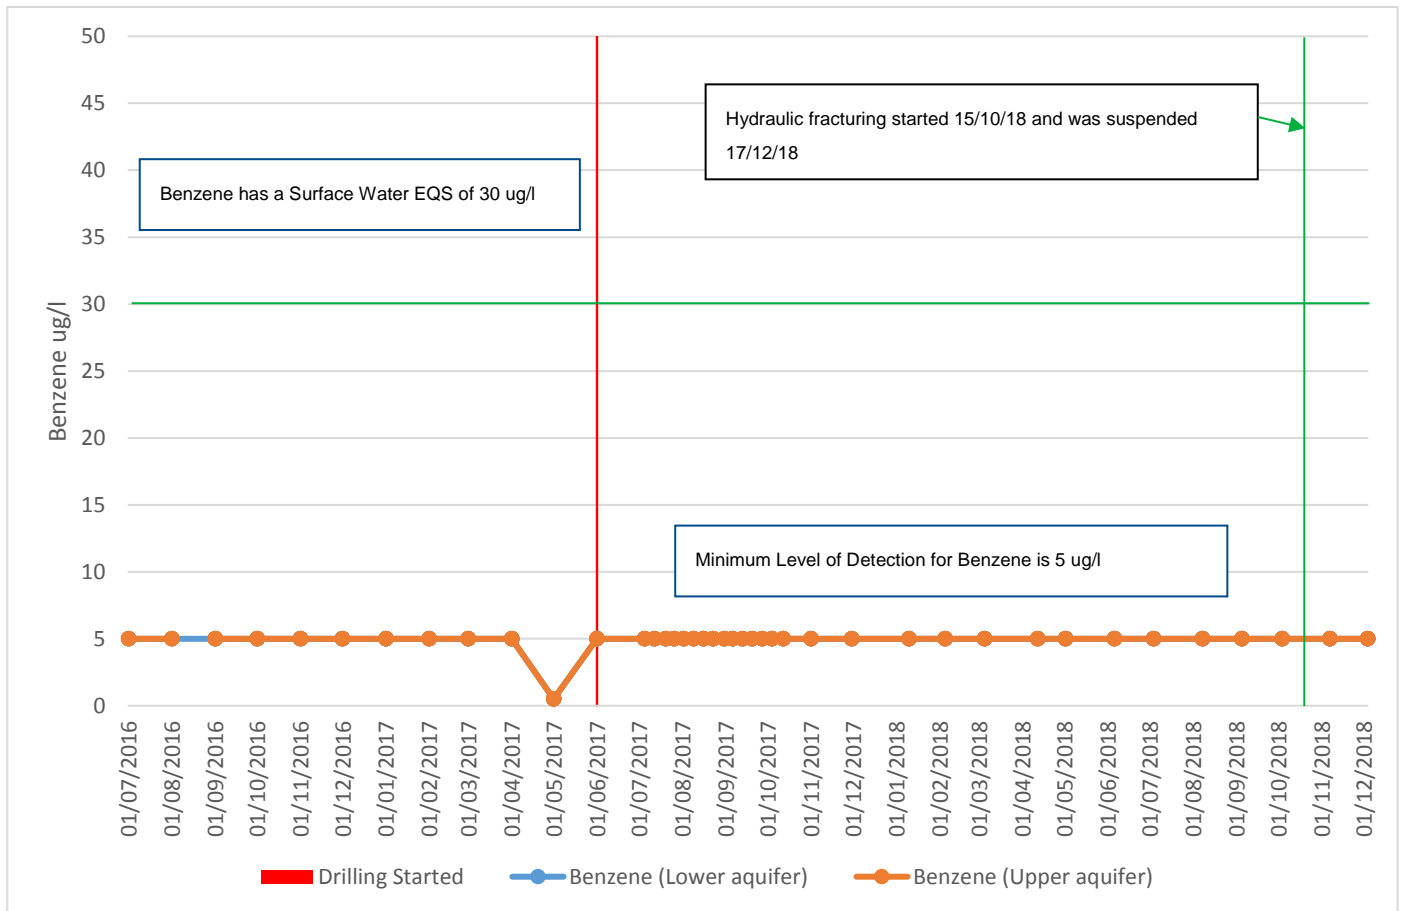

## Acrylamide

Groundwater Monitoring Preston New Road Acrylamide in 2 aquifers

No acrylamide results were provided for December.

## Benzene

Groundwater Monitoring Preston New Road Benzene in 2 Aquifers (Maximum Values)

## Chloride

Groundwater Monitoring Preston New Road Chloride in 2 Aquifers (Maximum Values)

# Methane

Groundwater Monitoring Preston New Road Methane in 2 aquifers (Maximum Values)

## Interpretation of Data

The data high-lighted in yellow show marginal increases over the background monitoring undertaken pre hydraulic fracturing, but are not considered to be statistically significant. Carbon Dioxide is seen to be high in November (in both upper & lower aquifer) this is considered to be a sampling anomaly, which has been referred back to Cuadrilla for comments.

## Interpretation of Data

The data high-lighted in yellow show marginal increases over the background monitoring undertaken pre hydraulic fracturing, but are not considered to be statistically significant. Dissolved Methane is seen to increase against the background maximum recorded within the 1st year in BH 1(B). The British Geological Survey have also detected Methane in other parts of the aquifer and stated that Methane (CH<sub>4</sub>) is also often detected, though rarely at high concentrations. The composition of CH<sub>4</sub>, where present, suggests that it has been produced in the superficial sediments by microbial reaction of organic matter. Carbon Dioxide is seen to have high values in November, and is probably an anomaly. This is being discussed with Cuadrilla.
