

# Belowground Double Skin Storage Tanks

The Belowground **ENVIROTANK** is the latest concept in the containment of hazardous fuels and chemicals, offering continuous protection to the surrounding environment. With its unique Leak Monitoring System the **ENVIROTANK** will warn you if failure should occur without any loss of product.

The **ENVIROTANK** is produced from Certified Carbon Steel for strength and protected externally with two coats of black bitumen or a tough corrosion resistant polyurethane coating, spark tested prior to despatch. The cavity between the inner and outer skin is filled at our works with specialised leak fluid and sealed prior to despatch. Designed for 98% containment of product and can be supplied with overfill prevention valves if required. The inner tank and outer skin are pressure tested at our works and certificates issued. The ENVIROTANK is normally delivered by our own fleet of vehicles in order to ensure delivery schedules are maintained. Since being established in 1857 J A Envirotanks are one of the leading suppliers to the Petroleum industry.

Our design is similar to storage tanks installed in Europe for the last 20 years. Manufactured to BS EN 12285-1:2003. From Steel plate to BS EN 10 025: 2004: S275

Compliance with the control of pollution regulations.

## Additional Fittings

- Holding down straps with ratchet tensioners
- Content gauges
- Dipsticks
- Overfill prevention valve with or without offset fill adapters
- Internal fill pipes
- Internal suction pipes
- Leak detection device (intrinsically safe) complete with reservoir, alarm unit, relay and probe
- Installation kit for leak detection device
- Four litre container of leak detection fluid for filling reservoir on site
- Manway flanges for connection GRP access chambers.

## Advantages

- Continuous monitoring for total environmental protection
- Product stocks are safely contained
- Tank continuously under test throughout its life
- Tanks can be encased in a suitable granular or concrete back fill
- Multi compartment tanks are available to customers requirements
- Simplicity of design reduces costly site time
- Design approved by leading oil companies
- Manufactured at our Birmingham facility ideally suited on the hub of the UK motorway network
- Accurate gauging systems available (magnetostrictive and ultrasonic).
