1 Introduction

The Environmental Permitting (England and Wales) Regulations 2016 (as amended) require the production of a Site Condition Report (SCR) for any facility that may cause a significant risk to land or groundwater.

This document constitutes the SCR provided to support the development and permit application for Mannings Heath Transfer Station (the Site). It is written in line with the requirements of the Environment Agency SCR template.

This report comprises a number of sections; different sections are required to be completed during the lifetime of the facility as detailed below. This report is comprised of Sections 1 to 7.

Permit Application:	Sections 1, 2 and 3 must be completed and submitted with the application.
Permit Life:	Sections 4, 5, 6 and 7 must be maintained.
Permit Surrender:	Add a new document reference in Section 1, Complete sections 8, 9 and 10 and submit with the surrender application.

2 Site Details

Name of Applicant:	SUEZ Recycling and Recovery UK Ltd
Activity Address:	Mannings Heath Transfer Station, Mannings Heath Road, Poole, BH12 4NH
National Grid Reference:	SZ 03900 94150
Document reference and dates for Site Condition Report at Permit Application and Surrender:	This report is prepared and submitted in support of the application to vary the environmental permit for Mannings Heath Transfer Station. February 2024.
Document references for site plans (including location and boundaries):	Figure 1 – Site Permit Boundary

Note:

The permit application process requires the submission of a site plan to the Environment Agency. Plans must be submitted with the application that shows:

- Site location, the area covered by the site condition report, and the location and nature of the activities and/or waste facilities on the site.
- Locations of receptors, sources of emissions/releases, and monitoring points.
- Site drainage.
- Site surfacing.

If the above information is not shown in the figures accompanying the Site Management Plan, then addition plans must be provided in this SCR.

3 Condition of the Land at Permit Issue

3.1 Environmental Setting

Environmental Setting:

- Geology;
- Hydrogeology, and;
- Hydrology.

The permit application area is located on the footprint of Mannings Heath Transfer Station which is located in the northwest of Bournemouth, approximately 5.5km northwest of the town centre, and 4.5km northeast of Poole. The Site sits within an industrial estate and is comprised of concrete hardstanding with containers and open air bays for the storage of wastes and a large central building.

The Site location and permit boundary are identified in Figure 1.

The Site background and sensitivity information is provided in Appendix A.

3.1.1 Geology

The local area is underlain by river terrace deposits of sand and gravel which in turn overlays the Branksome Sand Formation. However, borehole logs from the BGS indicate that there is approximately 4m of made ground fill consisting of silt, sand and clay mixed with organic matter and minor waste.

There are no known shallow mining hazards and the site is not within an area that could be affected by coal mining. Regarding radon affected areas; less than one percent of homes are above the action level, and there are no radon protective measures that are necessary in the construction of new dwellings or extensions.

3.1.2 Hydrogeology

Both the superficial head deposits and Branksome Sand Formations are classified by the Environment Agency as Secondary A Aquifers which are able to provide strategic local yields and provide base flow for rivers.

The Site does not lie within a groundwater source protection zone (SPZ) and there are no SPZs within the site vicinity. There are no licensed groundwater abstractions within 250m, or potable water groundwater abstractions within 2km, of the site boundary.

3.1.3 Hydrology

The nearest surface water feature to the Site is a small urban stream approximately 350m to the north-west, with the nearest major water feature being an unnamed stream flowing to the southeast approximately 1.5km to the northeast.

There are known to be 3 active licensed discharge consents within 1km of the site, however, none of these are directly related to the Site.

The Envirocheck Report sensitivity data (Appendix A) indicates there is a limited risk of flooding at the Site from fluvial sources, the detailed modelling provided by the flood risk reporting is appended as Appendix B identifies a risk of surface flooding from a 75, 100 and 1000 year return period on the southern boundary of the Site.

3.2 Pollution History

Pollution History:

- Pollution Incidents, that may have affected land;
- Historical Land Use, and associated contaminants;
- Any visual/olfactory evidence of existing contamination, and;
- Evidence of damage to pollution prevention measures.

3.2.1 Pollution Incidents

No pollution incidents have been recorded to controlled waters directly related to the Site or within 1km. However it is noted that a prosecution relating to a petrol spill is recorded approximately 250m northwest, as well as 3 prosecutions related to waste storage and processes between 255m-669m from the Site.

3.2.2 Historical Land Use and Present Site Use

The historical mapping is provided in Appendix C.

The Site is currently operated as a waste transfer station handling wood, WEEE and plastics and is comprised of a central building and a concrete hard standing.

The historical mapping shows that a gravel pit was present in the southeast corner of the site from 1887 until being identified as being disused in the 1963 mapping. The surrounding areas are recorded as being a mix of agricultural land, sand and gravel pits and brick works from 1887 to 1902. Development around the Site began in the early 20th century with a hospital opening to the northeast, with Newtown to the southwest undergoing significant expansion in the 1932 mapping.

The 1936 map indicates development of residential buildings to the southeast of the site, with apparently commercial buildings in the northwest. Further development of the Site is recorded in the 1963-71 map which

shows a layout of the depot area, with further expansion of the surrounding industrial estate at this time. Additional expansion of commercial, industrial and residential properties is recorded to the northwest during the 1990's, which shows the development of the Site into its current layout.

3.2.3 Visual/Olfactory Evidence of Existing Contamination

There is no visual or olfactory evidence of existing contamination at the Site.

3.2.4 Evidence of Damage to Pollution Prevention Measures

There is no evidence for damage to the pollution prevention measures present at the Site.

3.3 Previous Assessments

Evidence of Historic Contamination:

- Historical Site Investigation;
- Historical Assessments, and;
- Remediation and Verification Reports.

3.3.1 Historical Site Investigations, Assessments, Remediation and Verification Reports

No historic site investigations, assessments or remediation and verification reports are held on file for this Site.

4 Permitted Activities

Permitted Activities:	The site is permitted as a Transfer Station.
Non-permitted Activities Undertaken:	N/A at this time
References: Plan showing activity layout; Env Risk Assessment.	Figure 1

5 Changes to the Activity

Have there been any changes to the activity boundary?	N/A at this time
Have there been any changes to the permitted activities?	N/A at this time
Have any 'dangerous substances' not identified in the Application Site Condition Report been used or produced as a result of the permitted activities?	N/A at this time
Checklist of supporting information:	<i>Plan showing any changes to the boundary (where relevant)</i> <i>Description of the changes to the permitted activities (where relevant)</i> <i>List of 'dangerous substances' used/produced by the permitted activities that were not identified in the Application Site Condition Report (where relevant)</i>

5.1 Changes to the Activity

N/A at this time

6 Measures Taken to Protect Land

Use records that you collected during the life of the permit to summarise whether pollution prevention measures worked. If you can't, you need to collect land and/or groundwater data to assess whether the land has deteriorated.

Supporting Information:	Inspection records and summary of findings of inspections for all pollution prevention measures, and; Records of maintenance, repair and replacement of pollution prevention measures.
--------------------------------	---

6.1 Inspection Records

N/A at this time

7 Pollution Incidents That May Have Had an Impact on Land, and Their Remediation

Summarise any pollution incidents that may have damaged the land. Describe how you investigated and remedied each one. If you can't, you need to collect land and /or groundwater reference data to assess whether the land has deteriorated while you've been there.

Supporting Information:	Records of pollution incidents that may have impacted on land, and; Records of their investigation and remediation.
--------------------------------	--

7.1 Pollution Incidents

N/A at this time.

7.2 Investigation and Remediation Records

N/A at this time.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Hampshire & Isle Of Wight

Published 1872

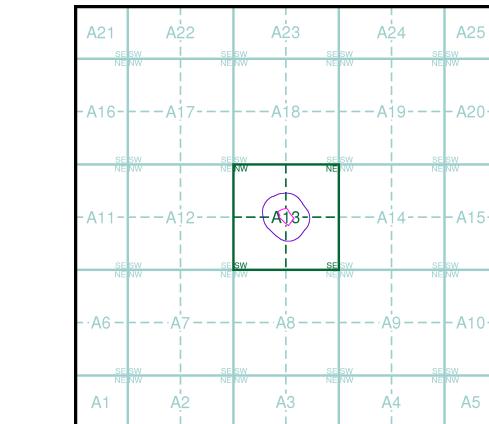

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Historical Aerial Photography

Published 1950

Source map scale - 1:10,560

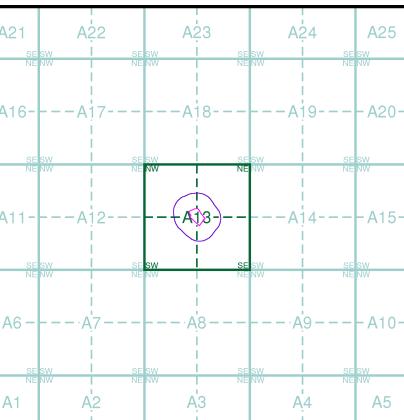

The Historical Aerial Photos were produced by the Ordnance Survey at a scale of 1:1,250 and 1:10,560 from Air Force photography. They were produced between 1944 and 1951 as an interim measure, pending preparation of conventional mapping, due to post war resource shortages. New security measures in the 1950's meant that every photograph was rechecked for potentially unsafe information with security sites replaced by fake fields or clouds. The original editions were withdrawn and only later made available after a period of fifty years although due to the accuracy of the editing, without viewing both revisions it is not easy to spot the edits. Where available Landmark have included both revisions.

Bournemouth

Published 1974

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

Ordnance Survey Plan

Published 1975

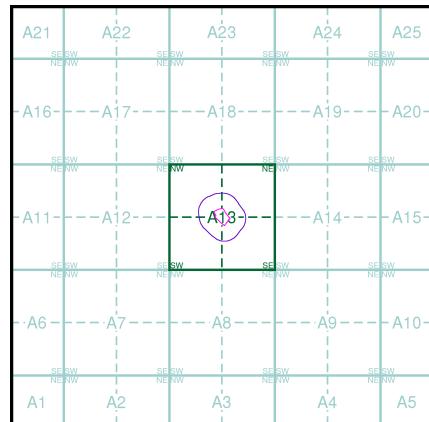

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Ordnance Survey Plan

Published 1989

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. These maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Bournemouth

Published 1990

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 2000

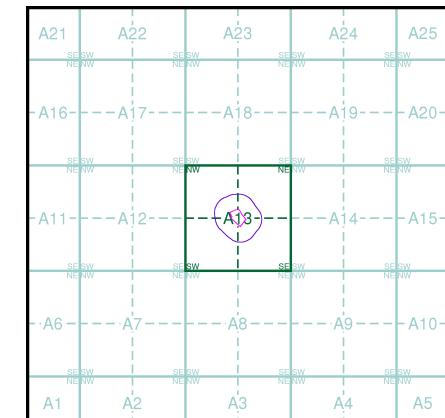

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2024

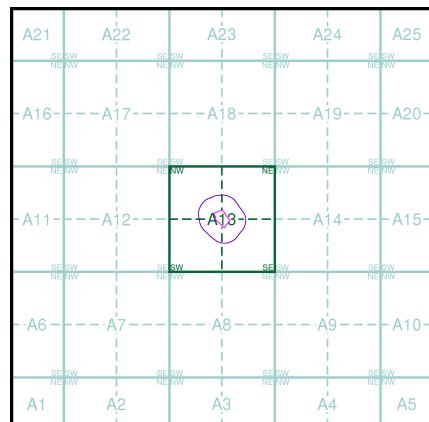

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Ordnance Survey Plan

Published 1971 - 1975

Source map scale - 1:1,250

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1973 - 1974

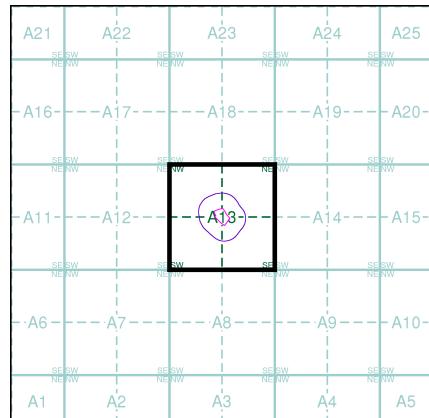

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Additional SIMs

Published 1988 - 1989

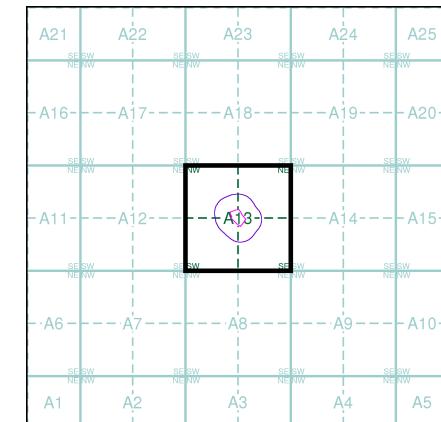

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1994

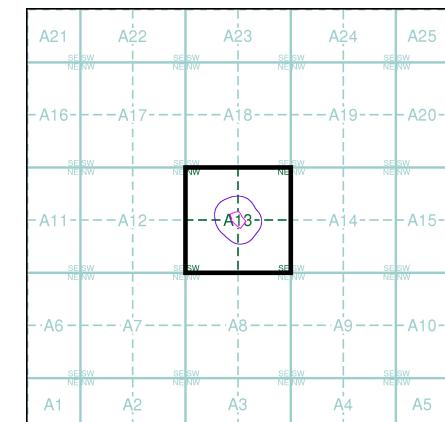

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.
