

## Technical standards

Fill in the table for each waste operation you're applying for and list the appropriate measures you're planning to use.

If you're using the standards set out in the relevant technical guidance note (TGN), you do not need to justify your decisions here.

You must justify your decisions in a separate document if:

- there is no technical standard
- the technical guidance provides a choice of standards
- you plan to use another standard

Your justification may include a reference to the environmental risk assessment provided for this application.

The documents listed in your table should summarise the main measures you use to control the main issues identified in your risk assessment or technical guidance.

For each activity listed in your table, describe the type of operation and the options you've chosen for controlling emissions from your process.

Remember to fill in a separate table for each waste operation.

Waste operation		
Activity description	Appropriate measure (TGN reference)	Document reference (if needed)
Physical treatment of non-hazardous waste	NA	sector-guidance-note-s506-recovery-and-disposal-of-hazardous-and-non-hazardous-waste

Always describe the type of facility or operation you're applying for and, if appropriate, use location plans, process flow diagrams or block diagrams to help describe the operation and process.

Give the document references you use for each plan, diagram and description.
