Good afternoon, Louise,

Further to my site visit on Friday 24th July, I would like to confirm the following:

On the Lanes Group site plan, it states that where the Haz waste is located on Appendix 11 CWR site map, any contaminated or leachate waste would run off to PS2 or F5.

This would then pass through to MHF30 and continuing to the forecourt separator. I can confirm that this separator (interceptor) is regularly maintained and emptied, with the waste being disposed of under EWC codes 13.05.03, 19.07.03, 16.10.02

I conclude that from my site visit it is highly unlikely that any contaminated run off or leachate from the hazardous operational areas will end up in the surface water drainage system.

Yours Sincerely

Jemma Copeland
