

HyNet Hydrogen Production Plant 1 – Technical Note

EPR Response 12b - Drainage System: Clean System

Summary

Section 2.3.6 of the Permit Application Supporting Document identifies, among the catchment areas draining to the clean uncontaminated system, the old tank farm. Confirm whether this the old tank farm is fully decommissioned, depolluted, and free from sources of contamination that may accidentally drain to the clean system.

Notes: you should collection alternative collection, for example to the potentially contaminated system, if risk of contamination from the old tank farm cannot be ruled out.

Response

The tanks in the alcohols tank farms were emptied and hot water washed during decommissioning. Demolition of all the tanks in the tank farm is now complete and no contamination was found.
