

## Non-Technical Summary

Multipanel UK Limited are applying for a bespoke waste permit to store and treat plastic packaging waste at CT15 4NL.

Waste plastic packaging bales consisting of low density polyethylene - LDPE (EWC 15.01.02) are delivered to the site and stored in the appropriate firebay before entering the shredding plan where material is shredded. It is then extruded by heat treatment for final use as pellets in the manufacturing plant on site.

Total storage at any one time of LDPE is no more than 20t and annual throughput is less than 30,000 tpa. No other waste types are accepted or treated at the facility.

The site and recycling plant will be operational 24/7 with a technically competent person available on-site as per WAMITAB requirements.

The site operates an EMS in accordance to EA guidance and the operation is operated on new impermeable surfacing and in accordance with a sealed drainage system.
