SITE CONDITION REPORT TEMPLATE

For full details, see H5 SCR guide for applicants v2.0 4 August 2008

COMPLETE SECTIONS 1-3 AND SUBMIT WITH APPLICATION

DURING THE LIFE OF THE PERMIT: MAINTAIN SECTIONS 4-7

AT SURRENDER: ADD NEW DOC REFERENCE IN 1.0; COMPLETE SECTIONS 8-10; & SUBMIT WITH YOUR SURRENDER APPLICATION.

1.0 SITE DETAILS	
Name of the applicant	SC Johnson Professional Ltd
Activity address	SC Johnson Professional Ltd. Denby Hall Way, Denby, Derbyshire, DE5 8JZ
National grid reference	SK 3933 4786
Document reference and dates for Site	Application document: 15 July 2024
Condition Report at permit application and	

Document references for site plans (including location and boundaries) Site Plan

Note:

surrender

In Part A of the application form you must give us details of the site's location and provide us with a site plan. We need a detailed site plan (or plans) showing:

- Site location, the area covered by the site condition report, and the location and nature of the activities and/or waste facilities on the site.
- Locations of receptors, sources of emissions/releases, and monitoring points.
- Site drainage.
- Site surfacing.

If this information is not shown on the site plan required by Part A of the application form then you should submit the additional plan or plans with this site condition report.

2.0 Condition of the land at permit issue				
Environmental setting including:geology	Geology: Pennine Lower Coal Measures Formation - Mudstone, siltstone and sandstone.			
hydrogeologysurface waters	Closest Groundwater Source Protection Zone (SPZ) located approximately 4.4km west of the site.			
	Unnamed drainage ditches present adjacent at western site boundary and approximately 100m south.			
Pollution history including:	No recorded pollution incidents.			
pollution incidents that may have affected land	Previously greenfield agricultural site before development.			
 historical land-uses and associated contaminants any visual/olfactory evidence of existing contamination evidence of damage to pollution prevention measures 	All process and storage areas provided with hardsurfacing. Secondary containment and yard surfacing subject to periodic visual inspection.			
Evidence of historic contamination, for example, historical site investigation, assessment, remediation and verification	Shallow ground investigation undertaken in 2022 as part of installation of slab for effluent treatment and storage tanks with bund. Data			

reports (where ava	ailable)	attached.
Baseline soil and groundwater reference data		Attached shallow soil sample data from construction of effluent holding tanks in 2022 shows no significantly elevated levels of contamination.
Supporting information	 incidents Historical Ordnance S Site reconnaissance Historical investigation reports 	dentifying environmental setting and pollution Survey plans on / assessment / remediation / verification undwater reference data

3.0 Permitted activities

Permitted activities	Schedule 1, Section 4.1 Organic Chemicals,
	Part A(1), a) Producing organic chemicals
	such as: (xi) Surface-Active Agents.
Non-permitted activities undertaken	Provision of steam for associated process.
	Warehousing.
Document references for:	Site Layout Plans
 plan showing activity layout; and 	Environmental Risk Assessment
 environmental risk assessment. 	

Note:

In Part B of the application form you must tell us about the activities that you will undertake at the site. You must also give us an environmental risk assessment. This risk assessment must be based on our guidance (*Environmental Risk Assessment - EPR H1*) or use an equivalent approach.

It is essential that you identify in your environmental risk assessment all the substances used and produced that could pollute the soil or groundwater if there were an accident, or if measures to protect land fail.

These include substances that would be classified as 'dangerous' under the Control of Major Accident Hazards (COMAH) regulations and also raw materials, fuels, intermediates, products, wastes and effluents.

If your submitted environmental risk assessment does not adequately address the risks to soil and groundwater we may need to request further information from you or even refuse your permit application.

4.0 Changes to the activity			
Have there been boundary?	any changes to the activity	Plan showing boundary attached, Additional boundary added to show route of overground trade effluent pipeline.	
Have there been activities?	any changes to the permitted	None	
in the Application	ous substances' not identified Site Condition Report been as a result of the permitted	If yes, list of them	
Checklist of supporting information	 Description of the changes List of 'dangerous substance 	s to the boundary (where relevant) s to the permitted activities (where relevant) stances' used/produced by the permitted identified in the Application Site Condition	

5.0 Measures taken to protect land			
prevention measu	you collected during the life of the permit to summarise whether pollution ires worked. If you can't, you need to collect land and/or groundwater data to the land has deteriorated.		
Checklist of supporting information	 Inspection records and summary of findings of inspections for all pollution prevention measures Records of maintenance, repair and replacement of pollution prevention measures 		

6.0 Pollution incidents that may have had an impact on land, and their remediation			
investigated and r	pollution incidents that may have damaged the land. Describe how you emedied each one. If you can't, you need to collect land and /or groundwater assess whether the land has deteriorated while you've been there.		
Checklist of supporting information	 Records of pollution incidents that may have impacted on land Records of their investigation and remediation 		

7.0 Soil gas and water quality monitoring (where undertaken)

Provide details of any soil gas and/or water monitoring you did. Include a summary of the findings. Say whether it shows that the land deteriorated as a result of the permitted activities. If it did, outline how you investigated and remedied this.

Checklist of supporting	•	Description of soil gas and/or water monitoring undertaken Monitoring results (including graphs)
information	•	Monitoring results (including graphs)

8.0 Decommissioning and removal of pollution risk

Describe how the site was decommissioned. Demonstrate that all sources of pollution risk have been removed. Describe whether the decommissioning had any impact on the land. Outline how you investigated and remedied this.

Checklist	of	٠	Site closure plan
supporting		•	List of potential sources of pollution risk
information		•	Investigation and remediation reports (where relevant)

9.0 Reference data and remediation (where relevant)

Say whether you had to collect land and/or groundwater data. Or say that you didn't need to because the information from sections 3, 4, 5 and 6 of the Surrender Site Condition Report shows that the land has not deteriorated.

If you did collect land and/or groundwater reference data, summarise what this entailed, and what your data found. Say whether the data shows that the condition of the land has deteriorated, or whether the land at the site is in a "satisfactory state". If it isn't, summarise what you did to remedy this. Confirm that the land is now in a "satisfactory state" at surrender.

Checklist	of	•	Land and/or groundwater data collected at application (if collected)
supporting		٠	Land and/or groundwater data collected at surrender (where needed)
information		•	Assessment of satisfactory state
		•	Remediation and verification reports (where undertaken)

10.0 Statement of site condition

Using the information from sections 3 to 7, give a statement about the condition of the land at the site. This should confirm that:

- the permitted activities have stopped
- decommissioning is complete, and the pollution risk has been removed
- the land is in a satisfactory condition.
