The variation application seeks to make the below change only to the site's operations:

- Include 'Washing' as a treatment activity within the permit
- Reflect the installation of a fixed wash plant within the aggregate processing area

This non-technical summary provides a summary of the regulated facility, an explanation of exactly what is being applied for, and a summary of the key technical standards and control measures that will be implemented at the site as a result of the application.

1.1 The Site

The site (centred at NGR NZ2673254963) is located at West Line Industrial Estate, Birtley, Chester Le Street, County Durham, DH2 1AU. The site is principally bounded as detailed in Table 1 below.

1.2 Current Environmental Permit

Waste operations at the site are currently authorised by a Tier 3 environmental permit (A11 : Household, Commercial & Industrial Waste T Station).

The Environmental Permit (EPR/EP3495LQ/V005) was originally issued as a Waste Management Licence dated 31st August 2005 to Mr. Stewart Storey before being transferred in full to JBT Waste Services Ltd on the 16th October 2009 and subsequently to Remondis Ltd in December 2017 as shown in Table 2 below.

Table 2– Permit History

Date	Status / Revision
31/08/2005	Issue of EA Waste Management Licence EAWML64154.

25/02/2019	Permit Variation (V005): Permit varied to increase the site boundary and to add the Fire Prevention condition.
06/06/2023	Permit Variation (V006): Permit varied to increase the annual tonnage to 149,000tpa

2.0 Proposed changes

The variation application seeks to make the following change only to the site's operations.

Substantial variation to include -

- Include Washing as a treatment activity within the permit
- Updated documentation to reflect the installation of a fixed wash plant within the aggregate processing area
- Update the permit to modern conditions

Also requested is that the supporting document Washplant Management plan is to be formalised upon the trial and testing of the plant. This is covering the monitoring and maintenance of the plant including the management of wash water. The testing parameters of the wash water are to be agreed upon use of the plant. A pre-operational condition is requested to allow for accurate testing parameters to be agreed.

No changes are required to waste types or annual tonnages is required.

Waste will still be accepted as part of the Household Industrial and Commercial Transfer Station with soil and aggregates currently accepted as part of the current onsite activities, will be subject to a wash process to separate and recover additional material to increase recycling and recovery of non-hazardous soils/aggregates.

The company wish to update to modern conditions permit as part of the application to allow effective modern regulation.

See Appendix 1 for the Description of Waste Activities.

See Appendix 2 for EWC codes for the Household and Commercial Transfer Station Activities.

See Appendix 3 for EWC codes for the Soil and Aggregate recycling and Washplant.

3.2 Non-Technical Summary

As part of the application this non-technical summary (NTS) is a concise document that provides a description of the application process should also provide an effective outline of all the key points set out in an Environmental Statement.

3.3 Environmental Management System

REM operate their own in-house Quality Environmental Management System which ensures that:

- The risks that the activities pose to the environment are identified;
- The measures that are required to minimise the risks are identified;
- The activities are managed in accordance with the management system;
- Performance against the management system is audited at regular intervals; and
- The Environmental Permit is complied with.

A copy of the Company Working Plan is included as Section 3 of the application and a summary of the key technical standards for the management of the recycling facility is included in Section 4.0 of this non-technical summary.

3.4 Environmental Risk Assessment

An Environmental Risk Assessment (ERA) has been undertaken and submitted with the permit variation application to assess and mitigate risks associated with the proposed changes on the site. There will be no point source emissions to groundwater, surface water or air resulting from the waste activity and neither will there be any site waste arising or global warming potential.

Therefore only 'Amenity and Accidents' remains applicable for assessment in this instance, and includes the consideration of odour, noise and vibration, fugitive emissions (including dust, mud, litter and pests) and accidents.

The ERA concludes that with the implementation of risk management measures, as described in the ERA, potential hazards from the facility are unlikely to be significant.

The Environmental Risk Assessment is included in Section 4 of this application.

3.5 Wamitab

Operations at the site will be under the overall control of a technically competent person who holds the relevant Certificate of Technical Competence (COTC) under the Waste Management Industry Training and Advisory Board (WAMITAB) scheme.

Evidence of competence is supplied within the application in Section 5 of this application.

3.6 Directors Information

Directors' information is supplied in Section 6 of this application.

3.7 Fire Prevention Plan

Subsequent to the variation application issued in 2019, an approved Fire Prevention Plan was submitted to the Environment Agency for approval. A copy of the FPP is included within Section 7 of this application, with confirmation of the EA approval email.

3.8 Operating Techniques

REM operate their own in-house management system which ensures that:

- The risks that the activities pose to the environment are identified;
- The measures that are required to minimise the risks are identified;
- The activities are managed in accordance with the management system;
- Performance against the management system is audited at regular intervals; and
- The Environmental Permit is complied with.

The Operating Techniques document is included in Section 8 of this application.

3.9 Site Condition Report

A site condition report has been prepared in relation to the proposed changes. This is included within Section 9 of this application.

3.10 Noise Management Plan

A noise management plan has been prepared in relation to the proposed changes. This is included within Section 10 of this application.

3.11 Noise Impact Assessment

A Noise Impact Assessment has been prepared in relation to the proposed changes. This is included within Section 11 of this application.

3.12 Odour Management Plan

An odour management plan has been prepared in relation to the proposed changes. This is included within Section 12 of this application.

3.13 Drawings

Site layout drawings have been prepared in relation to the proposed changes. These are included within Section 12 of this application.

4.0 Key Technical Standards

The key technical standards which will be employed to ensure that the proposed activities do not give rise to a significant environmental impact are summarised below:

- The Environmental Permitting (England and Wales) Regulations 2016;
- Develop a management system: environmental permits, February 2016;
- Control and monitor emissions for your environmental permit, February 2016;
- Fire prevention plans: environmental permits, January 2021;
- Risk assessments for your environmental permit, February 2016; and
- Sector Guidance Note S5.06: recovery and disposal of hazardous and non-hazardous waste, May 2013.
- Non-hazardous and inert waste: appropriate measures for permitted facilities - Guidance - GOV.UK (www.gov.uk).

In summary, the rules and operating procedures employed at the site will ensure that:

- All waste is managed in accordance with the Environmental Permit and legal requirements;
- The management and prevention of fires on site will be controlled via the Fire Prevention Procedure;
- The storage and treatment of waste is undertaken on impermeable surfacing with sealed drainage where applicable;
- Any tanks or containers used for the storage of any liquid fuel oil or other potentially polluting liquids/materials shall at all times be labelled as to the contents, and will be fit for purpose;
- Vehicles and plant will be appropriately maintained to ensure that operation will not give rise to unacceptable noise or vibration levels; and
- The risk of fugitive emissions (dust, noise, odour, pest and litter) is minimised;
- Management of wastewater and site run off are managed in accordance with legislation.

Procedures are in place for the regular inspection and maintenance of storage areas and associated infrastructure, including site surfacing, drainage systems and containment measures.

Records will be maintained detailing any action taken to repair infrastructure and faults.

An Accident Management Plan (EMS003) is maintained and regularly reviewed to assess and minimise environmental risks and hazards of accidents and their consequences.

5.0 Conclusion

The overall conclusion from the studies undertaken in support of the permit variation application is that there is unlikely to be a significant environmental impact upon potentially sensitive receptors as a result of the proposed Environmental Permit variation.

Remondis Ltd is fully committed to ensuring the highest standards are met and will undertake its activities in a manner consistent with best industrial practices and with the implementation of the company's management system.
