

Thornton Le Moor Poultry Unit

The installation at Thornton Le Moor Poultry Unit will be able to meet all the new relevant BAT conclusions (BAT 31 b 4).

A nutritional strategy will be employed reducing the levels of N and P

This will be verified by means of manure analysis and reported annually along with dust emissions based on the standard emission factor for pullets.

NH₃ emissions will be calculated using the standard emission factors and reported annually.

On a weekly basis, odour levels at the installation will be monitored for high housekeeping odours by persons not directly involved with the poultry.
