

Carr House Farm

The installation at Carr House Farm, will be able to meet all the new relevant BAT conclusions.

A nutritional strategy will be employed reducing the levels of N and P

This will be verified by means of manure analysis and reported annually along with dust emissions based on the standard emission factor for broilers.

NH₃ emissions will be calculated using the standard emission factor and reported annually.

Odour monitoring will be carried out weekly at the installation boundary by means of sniff testing by persons not involved with the poultry production.
