Facility Reference Information
Please complete the following information:
Company Name:
BH EnergyGap (Doncaster) Limited
Location:
Doncaster ERF
Permit Number:
N/A
If you have data already stored in a previous version of the H1 software you may import it by pressing the button to the right.
Please note that before the import can take place any data that already exists in this copy of the tool will be removed. Please also note that any 'Operating Mode' information you had entered in your Air and Water inventories will defer to the default of 100% on data import
NOTE ON MICROSOFT ACCESS SECURITY WARNING
Depending on your security settings, you may get a security notice appearing each time the import routine connects to a table in your source database. You need to click 'Open' on this message for the Import routine to be successful. There are 18 tables to connect to in total but if you place your cursor over the 'Open' button you will be able to repeatedly click your mouse to make this process execute quickly and without too much frustration. We apologise for this inconvenience but it is an aspect of Microsoft Security provisions that are beyond our control.

Introduction, Step 1
<< Back
Next >>
Go To: Introduction, Step 1
Step 1
Introduction to Step 1
Step 1: Describe the Scope and Options
The aim of this step is to:
- state the OBJECTIVES of the assessment
- in the case of ENVIRONMENTAL ASSESSMENT of the whole facility, describe the scope of the activities to be included in the assessment;
- in the case of OPTIONS APPRAISALS, identify candidate options for BAT by considering all relevant techniques to prevent and minimise pollution and the scope of activities covered by the techniques.
Depending on the reason for the assessment, you will need to complete different modules of the guidance. The software will automatically select the required modules according to the responses you enter.
NOTE: If you are going to complete more than one assessment or appraisal, make sure that you create a copy of the H1 file for each new assessment BEFORE you begin to input data. This is because Microsoft Access automatically saves changes to the current file you are using, rather than allowing you to save your changes at the end of your work.
TO CONTINUE WITH STEP 1, PRESS "NEXT".

Describe the Objectives
<< Back
Next >>
Go To:
Describe the Objectives
Describe the Objectives
Depending on the reason for the assessment you will need to complete different parts of the tool.
Select the type of assessment:
a) to carry out an ENVIRONMENTAL ASSESSMENT of the releases resulting from the facility as a whole
Do Steps 1, 2 and 3 only
b) to conduct a costs/benefits OPTIONS APPRAISAL to determine BAT or support the case for derogation under the Industrial Emission Directive.
Do Steps 1,2, 3 and 4 and continue with 5 and 6 if necessary
1.1 Briefly summarise the objectives and reason for the assessment in terms of the main environmental impacts or emissions to be controlled:
An assessment of the impact of emissions from the Doncaster ERF (the Facility).
e.g. "To appraise several candidate options for the prevention and minimisation of releases to air of NOx and SO2 for a new energy from waste plant, in order to select BAT"
or "To appraise the costs and benefits of applying indicative BAT to further control BOD discharged to water at an existing paper mill"
or "To assess the existing environmental impact of all emissions from all activities within an installation for the production of cement, prior to investigating further controls."
or "To assess the environmental impact of an existing discharge of treated sewage effluent on the receiving water"

Go To:
Candidate Options
Describe the Candidate Options
Identify all reasonably applicable options of techniques
You should include:
a) a brief description of individual control measures or configurations of control measures seleted for each option, and the activities with which they are associated (the existing base-case may conveniently be the first option).
b) justification why any techniques generally applicable to the regulated facility have not been selected for assessment. (see relevant H1 annex) (This should be based on regulated facility-specific technical, not economic reasons).
c) for new projects, whether any initial environmental assessment that was done at the project evaluation stage, or any screening of technology or process routes prior to this assessment, particularly where this has a bearing on environmental performance. (see H1)
In the case of b) or c) please enter your Comments here:
Option Number
Title
Description
e.g.
1
Base-Case
Once a series of options have been generated for the proposed project, it is recommended that the Operator discuss these with the local Regulator to check both parties agree that the options are satisfactory. This may save the Operator from spending resources on assessment of options which are unlikely to meet the required environmental performance.
List the main activity or activities to which the release control option Number:1 (Base-Case) is/are applicable and any other activities that will be affected by the candidate control option on the main activity.

Go To:
Step 2 - Emissions Inventory
Step 2
Introduction to Step 2
Step 2: Emissions Inventory
The aim of this Step is to produce an inventory of sources and releases of polluting substances from each option.
This is used as the basis for the subsequent evaluation of environmental impacts.
For this Step you will require information on:
- release points and sources of emissions to air, water (inc. sewer) or land
- concentration and mass rate of released substances
- frequency and duration of releases and how these relate to long term and short term effects
IMPORTANT NOTES
- you may need to consider a suitable method for assessment of groups of pollutants, such as VOCs, heavy metals, uncharacterised liquid effluents, etc (see "Grouping air emissions" in Annex F).
TO CONTINUE WITH STEP 2, PRESS "NEXT".

Comments:
Bottom ash will be sent to a suitably licensed processing facility for reutilization e.g. as an aggregate in road building. Oversize material will be transported off-site for disposal at a suitable waste management facility.
Ferrous metal will be transferred off-site for recycling.
APCr will be sent to a suitably licensed treatment facility - it may be possible to reuse this material for example to neutralise acids and similar materials.

Step 3 - Quantify Impacts
<< Back
Next >>
Go To:
Step 3 - Quantify Impacts
Step 3
Introduction to Step 3
Step 3: Quantify Impacts
The aim of this Step is to quantify the effects on the environment of the releases listed in the inventory in Step 2. The guidance provides methods for assessing the eight main environmental considerations of most relevance to the EPR regime. Your releases may not result in effects to all eight of these considerations, and this tool allows you to screen out any that are not relevant.
The emissions you entered in Step 2 are automatically brought forward for assessment into each environmental consideration that is relevant for that type of release (e.g. a release may have more than one type of effect).
This part of the tool allows you to screen out any releases that are insignificant, and to identify those releases where further, detailed assessment of the potential environmental impact may be required.
IMPORTANT NOTE
This software tool only completes part of the requirements for Step 3, as described above. Depending upon the degree of risk to the environment presented by the releases, the operator may need to do further, detailed assessment of the potential effects using methodologies that are not provided here. This information should be submitted separately, as indicated within this part of the tool.
TO CONTINUE WITH STEP 3, PRESS "NEXT".

Local Environmental Quality
Local Environmental Quality
Describe the Quality of the Environment:
Provide a brief description of the main local factors that may influence the importance of the impact of emissions in the surrounding environment
Air Quality
Are there any Environmental Quality Standards relating to substances released from the activities, which may be at risk due to additional contribution from the activity ? (Environmental Quality Standards for air and water are described in EPR Technical Guidance Notes)
Refer to Appendix E of the Application (Air Quality Assessment
Are there any Local Air Quality Management Plans applicable to releases from the activity?
Refer to Appendix E of the Application (Air Quality Assessment)
Water Quality & Resources
Are there any Environmental Quality Standards relating to substances released from the activities, which may be at risk due to additional contribution from the activity?
Not applicable
Are proposals to abstract water satisfactory in order to obtain an abstraction licence?
Not applicable
Is the activity located in a groundwater vulnerable zone (for activities with direct releases to land only)?
Not applicable
Proximity to Sensitive Receptors
Is public annoyance likely to be an issue for noise, odour or plume visibility ?
Refer to Appendix E of the Application for Sensitive Receptors.
Refer to Appendix C of the Application - Noise Assessment.
Refer to section 2.4.7 Supporting Information for details regarding Odour (and Appendix D - Environmental Risk Assessment).
Are there any wildlife habitats, eg Special Areas of Conservation,or Special Protection Areas, likely to be affected by releases from the activity? (Description of requirements of Habitats Directive is provided in EPR Technical Guidance Notes)
Refer to Appendix E of the Application (Air Quality Assessment)

Calculate Process Contributions of Emissions to Air
This table estimates the Process Contribution (PC), calculated as the maximum ground level concentration for each emission listed in the inventory, according to the release point parameters input earlier. If you have more accurate data obtained through dispersion modelling, this may be entered as indicated and will be used instead of the estimated PC.

19 Hydrogen fluoride (as F) (Monthly Mean) 16 0.0148 0.01 160 3.31 0.22
Note that the Process Contribution shown for each substance is the sum of the individual process contributions of each point from which the substance is emitted. Process Contributions obtained from modelling data should incorporate all relevant release points and flow conditions.
* State the location of any detailed air dispersion modelling and also the main assumptions:
Comments:
A detailed air quality assessment has been undertaken. The results of the assessment are presented in Appendix E of the Application.

Summary of Environmental Assessment
<< Back
Next >>
Go To:
Summary of Environmental Assessment
Summary of Environmental Assessment
You have now completed all of the steps in this software for the environmental assessment. This will provide you with:
an inventory of all emissions sources and substances emitted from your activities
an information trail of how the impacts of these emissions have been assessed
a summary of the impacts
You now need to use this information to confirm whether the emissions are acceptable, i.e. that they do not cause significant pollution to occur, by responding below:
Do any of the emissions exceed any of the following:
Statutory Emission limit values:
No
If yes, identify the substances concerned and improvements that are needed to at least meet the statutory requirement
Environmental Quality Standards (air and water):
No
If yes, identify the substances concerned, the contribution from the activities and investigate whether further detailed fate and effect modelling and/or pollution controls are needed. Ensure that the relevant EQS reference conditions are applied.
Environmental Assessment Levels:
No
If yes, identify the substances concerned, the contribution from the activities and investigate whether further detailed fate and effect modelling and/or pollution controls are needed.
Use the box below to provide further information on any of the above to which you have responded 'Yes':
Finally, print all of the information and submit with your application. Remember to include any supplementary information and reports that you have had made reference to during the assessment procedure.

Step 4 - Compare Impacts
<< Back
Next >>
Go To:
Step 4 - Compare Impacts
Step 4
Compare Impacts between Options
The aim of this Step is to compare the overall performance of each option for all of the environmental considerations assessed in Step 3, in order to identify which option represents the lowest impact on the environment as a whole.
IMPORTANT NOTE
Unless the best option is self-evident (i.e. results in the lowest impact for all considerations), you will need to use professional judgement to decide which option is the best overall. This judgement should be made taking into account the considerations described in the H1 guidance notes and may require decisions about the relative importance of environmental considerations. The operator should submit a response to the Regulator that describes how the decision has been made. The following page provides a structure which may be used to summarise the decision-making process.
