

WASTE STREAM

Waste Code (EWC)	Description	Estimated Annual Tonnage (Approx.)
20 03 03	Street Cleaning Residues (Gully Waste) Street Cleaning Residues (Road Sweepings)	2500

The total daily storage and treatment capacity for EWC 20 03 03 is 45 Tonnes.

Estimate to treat a maximum of 2500T of EWC 20 03 03 annually.

Water recycling

To reduce the volume of water discharged to foul sewer, some of treated water will be reused into the gully wagons. The tank onsite can hold 250ltrs (0.25t) at any one time, it will likely not be used any more than once a week. It is expected to recycle up to 20,000ltrs (20t) annually.

This will be dependent on the water quality sampling data and compliance with determinands in the trade effluent discharge consent.
