

APPENDIX H

Non-technical summary

The works approved by Planning Permission 15/0071/CWMAJM provide for, *inter alia*, site restoration using imported inert fill material at Kempsford Quarry, Gloucestershire (the Kempsford site).

Completion of the site restoration scheme, involving stabilisation of existing lake banks and the creation of lake support margins and shallows requires 70,000m³ (approximately 119,000t using a standard conversion factor of 1.7t/m³) of imported inert fill material. Approximately 17,000t of gravel is to be extracted from an area along the south-western side of the lake. Both activities will occur concurrently.

An application is being submitted for a Bespoke Environmental Permit based on SR 2015 No. 39 (use of waste in a deposit for recovery operation). The applicant is Multi-Agg Limited.

The application is submitted on the basis that the approved scheme in its entirety is, as a matter of law, a waste recovery operation.

To ensure that the recovered waste material is suitable for its intended use, the works will be managed by staff having the appropriate level of technical competence with relevant qualifications gained from one of the accepted industry schemes.

Robust Waste Acceptance Criteria and Procedures will be implemented to ensure that the imported inert fill material used in the works is as described on Waste Transfer Notes, is permitted by the Environmental Permit, is fit for purpose and will not cause environmental harm.

See also approved plans and cross sections presented in the waste recovery plan (Appendix K of the Environmental Permit application).
