

Schedule 1 Activity: 6.4 Part A(1)(b)

Factory Capacity = Maximum Site Output approx. 19.66 Tonnes per Day.

This is approximated and based on the below, added together:-

- Jet Dyeing : Production Capacity : 16.46 Tonnes per Day
- Winch Dyeing : Production Capacity : 3.20 Tonnes per Day

Schedule 1 Activity: 5.4 Part A (1)(a)(ii)

The ETP has the capability of treating up to 26l/s continuously (2.2 million litres in 24 hours), but has never reached this volume. Using the average volume of trade effluent per metre of fabric processed for a maximum production capacity of 19.66 tonnes, 1.5 million litres of effluent would be treated in a 24 hour period.
