**Subject:** EPR/TP3130QY/A001 - further DM queries

Hi Robin,

Thank you very much for sending all the requested information and additional payment. Unfortunately, the following query was not addressed:

- 1) Please confirm why the Ammonia Report used different Critical Loads for New Plantation and Home Wood than the values used in the pre-application screening?

Site	Pre-app	Ammonia Report
New Plantation	Clo N – 10	Clo N – 15-25
New Plantation	Clo Acid – 2.699	Clo Acid – 2.726
Home Wood	Clo N - 10	Clo N – 15-25

The report states that the 'values listed by the EA in the pre-application document were used' for the modelling, but they still do not match the figures listed in Table 2-1. I can also not find these figures on APIS which is the source stated in the table. In order to Duly Make the application, we will need confirmation that the pre-application values were used in the modelling and Table 2-1 updated to reflect this.

Please can you address the above and then I can send out the Duly Made notice and proceed with the application.
