

**DOCUMENT REFERENCE: B4-01 Facility Description**

**EMR Liverpool Gladstone S1**

**METAL RECYCLING FACILITY**

Bespoke permit application for the operation a metal recycling facility.

**Process:**

1. Material transported to site via road.
2. Material accepted inwards if it is in line with required quality / permit standards - scrap metals free from contamination or mixed with other waste such as oils or plastics.
3. Material assessed in order to identify if meets End of Waste Criteria (EoW) – If so material heaped with other EoW scrap ready for export via ship from the dock.
4. Any material that requires further processing or sorting prior to export will be directed to the appropriate area within the yard. Material may be sorted or processed using the following methods: screening, trommeling, hot cutting, snipping, baling, shearing, magnet / eddy current separation.
5. Scrap will be sent for export via ship.
