1. SITE DETAILS

1.0 INTRODUCTION

Chane Terminals UK Limited (Chane) operates the Chane Terminal Liverpool waste storage facility (the 'Site'). The Site is located within an industrial area, close to the River Mersey at Alexandra House, Regents Road, Bootle, Liverpool L20 1ES.

The terminal opened in 1994 and was purpose-built to store and blend vegetable oils into liquid feed products. The Site now comprises a bulk liquid storage terminal, where Chane stores bulk waste vegetable and food oils for third party customers (of which there is currently only one), to be used as feed to produce biofuels. Chane is proposing to increase their storage capacity on site to a maximum of 10,000 tonnes, store waste for over 12 months, and store other non-hazardous waste vegetable and food oils, requiring a bespoke waste permit for the Site.

This Site Condition Report (SCR) accompanies the permit application for the Site.

The SCR has been prepared by Environmental Resources Management Limited (ERM) based on data on current and expected future site operations provided by Chane, with reference to the guidance provided by the Environment Agency (EA) in the May 2013 document Site Condition Report – Guidance and Templates Version 3. The layout of this report is consistent with that suggested in the SCR template in the guidance.

The layout of this report is as follows:

- Section 1 – Site details
- Section 2 – Condition of the land at permit issue
- Section 3 – Permitted Activities

1.1 SITE CONDITION REPORT AT PERMIT APPLICATION

This document acts as the Application SCR which has been prepared at the time of permit application in June 2025. This Application SCR will be submitted to the EA with the environmental permit application.

When the time of permit surrender arises, a follow-up SCR will be produced and submitted for review.

SITE DETAILS	
Name of the applicant	Chane Terminals UK Limited
Activity address	Alexandra House, Regents Road, Bootle, Liverpool L20 1ES
National grid reference	Grid Reference (6 figure) SJ 330956 X (Easting), Y (Northing) 333064, 395676
Document reference and dates for Site Condition Report at permit application and surrender	• Environmental Permit Application: H5 Site Condition Report, dated 2 June 2025

--	---

1.2 SITE LAYOUT

The Site comprises a series of industrial buildings and storage tanks. The main operational areas are as follows:

- 20 storage tanks of varying sizes for storing waste oils;
- Two gas-fired boilers on site used to generate steam for heating the storage tanks;
- Import and export of waste oil via road tanker and/or ship.

Figure 1 within Appendix A shows the location and extent of the site boundary. The site surfacing comprises primarily of hardstanding material which is kept in good condition.

Further details on bulk storage are provided in section 2.2 of the Waste Permit Application Supporting Information Document.

1.3 SITE DRAINAGE

The Site has a Trade Effluent Consent in place (reference 694T52038BOO1, issued by United Utilities (UU) 8th July 2013) for discharge of wastewater to sewer, consisting solely of wastewater derived from the wash down of the tank farm area and yard.

Wastewater from the tank farm bund, which includes rainfall runoff from storage tanks, is contained and released via a manually operated outlet valve from the bund to an effluent pit and 3-stage separator before a controlled release to sewer. Prior to release from the bund, the operator checks the condition of the wastewater before emptying it, to ensure it is not contaminated. Effluent/contaminants captured in the interceptor are pumped to an effluent tank which is collected and disposed of by a third-party subcontractor.

Other sources of wastewater directed to the effluent pit for release to sewer includes runoff from the yard, any spills or leaks in the offloading bays, and water used to wash down areas of the Site after a spillage. Additionally, the drainage system is cleaned annually.

Effluent to sewer is sampled and tested monthly by UU to ensure analytes stipulated within the consent document are not exceeded in the effluent. Analysis includes testing for ammonia, suspended solids, pH, and chemical oxygen demand (COD).

Further details are provided in section 2.4 of the Waste Permit Application Supporting Information Document.

1.4 SURROUNDING LAND USE

The Site is located in the Merseyside administrative boundary. The Site is located within an industrial area next to Gladstone Dock and approximately 5.3 km north of Liverpool City Centre. The following identifies receptors surrounding the Site:

- *To the North:* industrial buildings and tank storage facilities. Gladstone Dock is approximately 55 m to the northwest.
- *To the East:* Regent Road bounds the Site with industrial buildings beyond. Residential properties are located approximately 290 m from the Site boundary.
- *To the South:* an industrial property with chimneys and tank storage. Alexandra Dock is located approximately 315 m from the Site boundary.
- *To the West:* a railway lies adjacent to the Site, with various warehouses beyond. industrial buildings and storage facilities. The River Mersey is located approximately 780 m from the Site boundary.

Further details of surrounding environmental receptors and sensitive built receptors are provided in section 1.2 of the Waste Permit Application Supporting Information Document.

2. CONDITION OF THE LAND AT PERMIT ISSUE

2.0 Condition of the land at permit issue	
Environmental setting including: • geology • hydrogeology • surface waters	Details are provided in Section 2.1 .
Pollution history including: • pollution incidents that may have affected land • historical land-uses and associated contaminants • any visual/olfactory evidence of existing contamination • evidence of damage to pollution prevention measures	Details are provided in Section 2.2 and Section 2.3 .
Evidence of historic contamination, for example, historical site investigation, assessment, remediation and verification reports (where available)	Details are provided in Section 2.3
Baseline soil and groundwater reference data	Details are provided in Section 2.3

2.1 ENVIRONMENTAL SETTING

2.1.1 REGIONAL GEOLOGY, HYDROGEOLOGY AND HYDROLOGY

2.1.1.1 SOILS

According to UK Soil Observatory (UKSO) 'Soilscapes' data¹, the Site is described as having 'sandy, freely draining, lime-rich soil (Soilscape 4)'.

Natural England's Agricultural Land Classification (ALC) map for North West Region² indicates that the land is non-agricultural and is predominantly in urban use.

2.1.1.2 GEOLOGY

According to British Geological Survey (BGS) online mapping³, as well as geological maps provided in the Envirocheck® Report (ref:370955755_1_1 dated 27 February 2025), the Site is underlain by superficial Tidal Flat Deposits (clay and silt) from the Quaternary period.

Bedrock underlying the Site is reported to comprise Wilmslow Sandstone Formation of the Sherwood Sandstone Group. Based on the current land use Made Ground is likely to be present underneath the entire Site.

Two available-to-view BGS borehole records⁴ within the Site boundary (SJ39NW172 and SJ39NW171) indicate the following geological sequence underlying the Site (see Table 2.1).

¹ UK Soil Observatory, Soilscapes. Available at: <https://www.landis.org.uk/soilscapes/>

² Natural England (2010), Agricultural Land Classification North West Region (ALC002), 1:250,000 scale

³ British Geological Survey Geology Viewer. Available at: <https://geologyviewer.bgs.ac.uk>

⁴ British Geological Survey Geoindex Onshore. Available at: <https://mapapps2.bgs.ac.uk/geoindex/home.html>

TABLE 2.1 SUMMARY OF GEOLOGICAL SEQUENCE UNDERLYING THE SITE

Stratum	Depth to Top (m bgl)	Depth to Base (m bgl)	Thickness (m)	General Description
Made Ground	Ground level	3.0	3.0	Tarmac and Concrete underlain by loose red brown sand and sandstone cobbles and boulders.
Sand	3.0	4.5	1.5	Medium dense silty uniform fine to medium sand with shell fragments
Clay	4.5	16	11.5	Firm becoming very stiff brown silty sandy clay with rounded gravel and cobbles.
Bedrock (Sandstone)	16	28 (end of borehole)	8m in borehole. Deposits vary from 90 m – 600 m depth.	Very weak to weak light red brown and interbedded light yellow grey silty sandstone.

m bgl – metres below ground level

According to the Mining Remediation Authority's online mapping⁵ and the Envirocheck Report the Site is not located within a Coal Mining Reporting Area.

According to UK Radon mapping⁶ and the Envirocheck Report, the Site is in a low potential radon area, where less than 1% of homes are at or above the action level.

2.1.1.3 HYDROGEOLOGY

The EA aquifer classifications for strata underlying the Site⁷ are as follows:

- Wilmslow Sandstone Formation – Principal Aquifer, defined as 'highly permeable aquifers with significant water storage and are able to support large abstractions'; and
- Superficial drift deposits– Unproductive Strata, defined as 'unable to provide usable water supplies and are unlikely to have surface water and wetland ecosystem dependent on them'.

According to BGS borehole log SJ39NW171, drilled at the Site in 1984 as part of the Mersey Estuary Pollution Alleviation Scheme, groundwater was encountered at a steady seepage at a depth of 8.4 m bgl.

According to the Envirocheck Report, there are no licenced groundwater abstractions within the Site boundary.

The nearest groundwater abstraction is located approximately 865 m east of the Site boundary registered to Asda Stores Ltd, abstraction licence ref: 2569030069, issued 19th September 2008 for other industrial/commercial/public services: heat pump.

⁵ Mining Remediation Authority online mapping, available at: <https://datamine-cauk.hub.arcgis.com/>

⁶ UK Radon online mapping, available at: <https://www.ukradon.org/information/ukmaps>

⁷ EA Aquifer Designation Map, available at: <https://magic.defra.gov.uk/MagicMap.html>

The Site is not located within a groundwater Source Protection Zone (SPZ) nor a Drinking Water Safeguard Zone with respect to groundwater. There are no SPZ's within 1 km of the Site. Combined groundwater vulnerability is classified as 'medium' across the Site.

The regional Water Framework Directive (WFD) groundwater unit in the vicinity of the Site (Lower Mersey Basin and North Merseyside Permo-Triassic Sandstone Aquifers Water Body)⁸ is classified by the EA as having an overall 'poor' status (2019 classifications), reportedly related to poor nutrient / pesticide / sewage management in the area. Given the proximity to the Irish Sea, saline intrusion is also possible.

2.1.1.4 HYDROLOGY

The Site is located within the WFD Ditton Operational Catchment⁹ but sits outside of the water bodies present in this area. According to the EA's flood maps for planning¹⁰ the Site is located in a Flood Zone 1, which is defined as having a low (<0.1%) probability of flooding from rivers or sea in any given year.

The Envirocheck Flood Screening Report indicates that the Site has a 75 and 200 year return (undefended) Pluvial flood depth of greater than 0.1 m and less than or equal to 0.3 m. The report also indicated a 1,000 year return (undefended) Pluvial flood depth of greater than 0.3 m and less or equal to 1 m. The Site is also at risk of flooding in the event of failure or breach of a canal embankment or aqueduct and/or dam or reservoir failure or breach.

There is a higher flood potential from the sea and will be one of the first areas to experience the effects of coastal flooding. There is limited potential for flooding from groundwater sources with a negligible risk of flooding with a chance of less than 1 in 100 (<1%) probability of occurrence.

The Site is not located within a Drinking Water Safeguard Zone with respect to surface water.

According to the Envirocheck Report, there are no licenced surface water abstractions on the Site or relating to the Site. There are four licenced surface water abstractions within 1 km of the Site, with the nearest located approximately 365 m northwest registered to Um Storage Limited (ref: NW/069/0030/028 dated 10th December 2021) for abstraction of water for other industrial/commercial/public services: Process Water.

2.2 HISTORICAL LAND-USES

2.2.1 ON-SITE AND OFF-SITE HISTORY

Historical Ordnance Survey (OS) maps obtained as part of the Envirocheck[®] Report (1850 – 2024), as well as publicly available aerial imagery (Google Earth, 2003 – 2022) indicate the following on-site (Table 2.2) and offsite history (Table 2.3), pertinent features within approximately 500 m of the Site only):

⁸ EA Catchment Data Explorer for Lower Mersey Basin and North Merseyside Permo-Triassic Sandstone Aquifers Water Body. Available at: <https://environment.data.gov.uk/catchment-planning/WaterBody/GB41201G101700>

⁹ EA Catchment Data Explorer for Ditton Operational Catchment. Available at: <https://environment.data.gov.uk/catchment-planning/OperationalCatchment/3139>

¹⁰ EA Flood Maps for Planning. <https://flood-map-for-planning.service.gov.uk/>

TABLE 2.2 SUMMARY OF ON-SITE HISTORY

Map / Image Date	Description
1850 - 1973	The Site is occupied by railway lines.
1973 - 1996	The Site is undeveloped with the railway lines no longer shown. Information from client contact indicates that the terminal opened in 1994.
1999 - 2000	An irregular (almost square shaped) building (later shown as a number of storage tanks, was shown in the centre of the Site with a smaller rectangular building was located in the southern portion of the Site.
2002	Five stainless steel tanks appeared as the Phosphoric acid tank farm to the north of the Site.
2003 – present	Aerial imagery from Google Maps shows the Site to be in its current layout with 5 additional storage tanks and associated pipelines located in the northern portion of the Site.

TABLE 2.3 SUMMARY OF OFF-SITE HISTORY

Map / Image Date	Description
1850 – 1894	The wider area is undeveloped land with some residential properties located between 150 and 500 m.
1894 – 1955	The wider area docks to the west and industrial land uses (brick works, railway lines, saw mill, timber yard and goods yard) to the north, east and south. Residential properties were shown approximately 90 m and a Hotel 200 m northeast of the Site.
1955 - 1994	Industrial land uses to the northeast have reduced while residential properties to the northeast have expanded. The remainder of the surrounding site remains unchanged.
1994 – present	Residential properties to the northeast were no longer shown and replaced by industrial properties. The nearest residential property was located approximately 290 m east of the Site boundary. The remainder of the surrounding site remains unchanged.

2.2.2 OTHER HISTORICAL INFORMATION

2.2.2.1 UNEXPLODED ORDNANCE (UXO)

Online unexploded ordnance (UXO) risk mapping by Zetica¹¹ classifies the risk of UXO at the Site as 'high' with Luftwaffe Targets and UXO Finds nearby. If intrusive works are to be undertaken, then ERM recommends that a Detailed UXO Risk Assessment is to be completed.

¹¹Zetica (2025), *Risk maps*. Available online at: <https://zeticauxo.com/guidance/risk-maps/>

2.2.2.2 HISTORICAL TANK STORAGE

The Site was purpose-built to store and blend vegetable oils into liquid feed products. The Site has previously stored palm oil, palm fatty acid distillate, RVO, fish oil, tallow, soya bean oil, rape seed oil, soya acid oil, mixed soft acid oil and mixed hard acid oil.

In 2002, Chane started operating a phosphoric acid tank farm (comprising 5 stainless steel tanks) directly north of the Site.

2.3 BASELINE SOIL AND GROUNDWATER DATA

There are no previous desk studies or site investigation reports for the Site. However, ERM recommends Site Investigation to be carried out to gain further details of the current site condition.

2.3.1 SUMMARY OF FUTURE SITE INVESTIGATION

Prior to its construction, the Site was previously a railway line, therefore contamination risk is medium and the overall risk to identified receptors has been assessed as significant. As no environmental samples have been taken to assess the baseline or current conditions of the Site, it is recommended that a baseline contaminated land investigation is undertaken.

3. PERMITTED ACTIVITIES

3.0 Permitted activities	
Permitted activities	The permitted waste operation will be: Storage of up to 10,000 tonnes of non-hazardous waste vegetable and food oils EWC 20 01 25 and EWC 02 03 04 . A description of the activities to be undertaken at the site are provided in section 2 of the Waste Permit Application Supporting Information Document.
Non-permitted activities undertaken	Not applicable at time of application.
Document references for: plan showing activity layout; and Environmental risk assessment.	Further details of proposed site activities at the Site are provided in section 2 of the Waste Permit Application Supporting Information Document. This includes a plan showing activity layout and an environmental risk assessment.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Historical Mapping Legends

Ordnance Survey County Series 1:10,560

	Gravel Pit		Sand Pit		Other Pits
	Quarry		Shingle		Orchard
	Osiers		Reeds		Marsh
	Mixed Wood		Deciduous		Brushwood
	Fir		Furze		Rough Pasture
	Arrow denotes flow of water		Trigonometrical Station		
	Site of Antiquities		Bench Mark		
	Pump, Guide Post, Signal Post		Well, Spring, Boundary Post		
	•285 Surface Level				
	Sketched Contour		Instrumental Contour		
	Main Roads		Minor Roads		
	Sunken Road		Raised Road		
	Road over Railway		Railway over River		
	Railway over Road		Level Crossing		
	Road over River or Canal		Road over Stream		
	Road over Stream				
	County Boundary (Geographical)				
	County & Civil Parish Boundary				
	Administrative County & Civil Parish Boundary				
	County Borough Boundary (England)				
	County Burgh Boundary (Scotland)				
	Rural District Boundary				
	Civil Parish Boundary				

Ordnance Survey Plan 1:10,000

	Chalk Pit, Clay Pit or Quarry		Gravel Pit
	Sand Pit		Disused Pit or Quarry
	Refuse or Slag Heap		Lake, Loch or Pond
	Dunes		Boulders
	Coniferous Trees		Non-Coniferous Trees
	Orchard		Scrub
	Bracken		Heath
	Marsh		Reeds
	Building		Glasshouse
	Sloping Masonry		Pylon
	Cutting		Embankment
	Road Under		Road Over
	Level Crossing		Foot Bridge
	Standard Gauge Multiple Track		Standard Gauge Single Track
	Siding, Tramway or Mineral Line		Narrow Gauge
	Geographical County		Administrative County, County Borough or County of City
	Municipal Borough, Urban or Rural District, Burgh or District Council		Borough, Burgh or County Constituency
	Civil Parish		
	BP, BS Boundary Post or Stone		Police Station
	Church		Post Office
	Club House		Public Convenience
	Fire Engine Station		Public House
	Foot Bridge		Signal Box
	Fountain		Spring
	Guide Post		Telephone Call Box
	Mile Post		Telephone Call Post
	Mile Stone		Well

1:10,000 Raster Mapping

	Gravel Pit		Refuse tip or slag heap
	Rock		Rock (scattered)
	Boulders		Boulders (scattered)
	Shingle		Mud
	Sand		Sand Pit
	Slopes		Top of cliff
	General detail		Underground detail
	Overhead detail		Narrow gauge railway
	Multi-track railway		Single track railway
	County boundary (England only)		Civil, parish or community boundary
	District, Unitary, Metropolitan, London Borough boundary		Constituency boundary
	Area of wooded vegetation		Non-coniferous trees
	Non-coniferous trees (scattered)		Coniferous trees
	Coniferous trees (scattered)		Positioned tree
	Orchard		Coppice or Osiers
	Rough Grassland		Heath
	Scrub		Marsh, Salt Marsh or Reeds
	Water feature		Flow arrows
	Mean high water (springs)		Mean low water (springs)
	Telephone line (where shown)		Electricity transmission line (with poles)
	Bench mark (where shown)		Triangulation station
	Point feature (e.g. Guide Post or Mile Stone)		Pylon, flare stack or lighting tower
	Site of (antiquity)		Glasshouse
	General Building		Important Building

Lancashire And Furness

Published 1850 - 1851

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Lancashire And Furness

Published 1938

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

ERM

Liverpool

Published 1974

Source map scale - 1:10,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2024

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Source map scale - 1:1,250

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

The image shows a 16x16 grid map. The columns are labeled A1 through A16 at the top and bottom. The rows are labeled 1 through 16 on the left and right. A thick black square highlights the area from row A11 to A14 and column 12 to 13. Within this square, a purple irregular shape is drawn, centered around the intersection of A13 and 13.

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Lancashire And Furness

Published 1890 - 1891

Source map scale - 1:500

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to complement the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.

Report Section and Details	Page Number
Summary	-
The Summary section provides an overview of the data contained within the report, detailing the number of data set features or the existence of a data set in relation to the buffer(s) selected. For ease of reference, the report is broken down into seven sections of data.	
EA / NRW / CEH Flood Data	1
This section details data from the Environment Agency/Natural Resources Wales and the Centre for Ecology and Hydrology. The EA/NRW data is reported to a distance of 250m from the edge of the site polygon and details both Zone 2 (extreme) and Zone 3 flood extents, as well as flood defences, flood water storage areas and areas benefiting from flood defences. The CEH data is reported to a distance of 250m from the edge of the site polygon and covers flood data for Scotland, divided into levels based on the frequency and magnitude of a predicted 100 year term. All data sets within this section are plotted and feature on the EA / NRW / CEH Flood Data (1:10,000) map. For added value, OS Contour data is also plotted, detailing contours, spot heights and land water boundaries.	
JBA Flood Data	2
This section contains the Comprehensive Flood Map ("CFM") data from JBA Risk Management Limited. The data is based upon the likelihood of a flood occurrence for up to 4 flood return periods depending on the type of flooding; these being 75 years, 100 years, 200 years and 1000 years. Each layer being modelled at a 5m cell resolution. Each return period is depicted on a separate 1:10,000 scale map and reports features to a distance of 250m in the datasheet from the edge of the site polygon. For each return period the following three sources of flooding are identified, surface water or pluvial flooding, undefended river flooding or fluvial flooding and undefended coastal flooding. In each case the extent of the flooding source is displayed with the associated depth range. In addition, a 1:10,000 scale map depicting flooding from a Canal Failure and a coverage check for this dataset is included. Where coverage exists, information is reported in the datasheet where the site could be affected by flooding that results from a dam breach. For added value, OS Contour data is also plotted, detailing contours, spot heights and land water boundaries.	
BGS Flood Data	25
This section contains two BGS data sets; namely Geological Indicators of Flooding and Groundwater Flooding Susceptibility, both of which report features out to a possible 1000m, with coverage in England, Wales and Scotland. Each data set is plotted on a separate BGS Flood Data (1:50,000) map.	
GeoSmart Information Groundwater Flood Data	27
This section contains data provided by GeoSmart Information who, building on their expertise, have developed algorithms and calibrated predictions of the risk of groundwater flooding occurring in Great Britain. The resulting map, classifies groundwater flood risk for each 5m x 5m into four categories, negligible, low, moderate and high. These classifications are based on the level of risk, combining severity and uncertainty that a site will suffer groundwater flooding within a return period of about 200 years.	
OS Water Network Data	28
This section details the MasterMap Water Network data sourced from the Ordnance Survey. The OS MasterMap Water Network data details a network representing the watercourse within Great Britain. The OS Water Network Lines data set details the approximate central alignment of a watercourse, including rivers, lakes and canals. The OS Water Network Nodes data set details features that represent a river's source, end, a junction where three or more links meet, and places where the real world related attribution changes; for example a watercourse becoming tidal. The data sets within this section are plotted and feature on the OS Water Network Map (1:10,000) . For added value, OS Contour data is also plotted, detailing contours, spot heights and land water boundaries.	

EA/NRW Historic Flood Events Data	-
This section details Historic Flood data sourced from the Environment Agency/Natural Resources Wales and from data held by Landmark. The EA/NRW Historic Flood Events data is reported to a distance of 1000m from the edge of the site polygon and details recorded historic flood events from 1703 to October 2008. The data also contains information on the source and cause of the flood, and how the flood outline was established. Also included in this section is Landmark's Historical Flood Liabilities data set, which identifies areas that are liable to flood based on systematic analysis of historical mapping dating back to the mid 19th century. Both data sets within this section are plotted and feature on the EA/NRW Historical Flood (1:10,000) map. For added value, OS Contour data is also plotted, detailing contours, spot heights and land water boundaries.	
EA/NRW RoFRS Data	29
This section details the Risk of Flooding from Rivers and Sea (RoFRS) data sourced from the Environment Agency/Natural Resources Wales and is reported to a distance of 1000m from the edge of the site polygon. The RoFRS data provides an indication of areas of land at risk of flooding from rivers and the sea. These areas of land, called impacted cells, are represented as 50 metre squares, or smaller areas where a square is intersected by a river or coastline. The average height information of the impacted cell, modelled river and sea levels and information about over 200,000 flood defences are used as inputs to a computer flood model run by the Environment Agency/Natural Resources Wales. The model compares the probability that the flood defences will overtop or breach and the distance of the impact cell from the river or the sea for 40 scenarios for probabilities of between 100% to 0.1%. The results are then consolidated to calculate a single probability category for each impacted cell. These results have been validated by local staff using their local knowledge and expertise. RoFRS is a national flood risk assessment and does not contain information about property thresholds. Due to variations in the input data and the performance of the computer flood model at particular locations, the resulting category of an impacted cell should only be used at a specific study scale. In certain areas it would only be appropriate to compare risks between towns and counties whereas in other areas they would be more suitable for understanding risk at a street level. The level of suitability for a particular cell is indicated by the cell's suitability scale. The data within this section is plotted and feature on the EA/NRW RoFRS Data (1:50,000) map. This dataset is not available in Scotland.
