Hello Lisa.

Tomorrow morning would be good for a call.

I also have a meeting due to finish at 10.30 so can we say 10.45 in case our meetings run over a bit?

The attachment from Autoflame following their assessment of the boiler at Angus Fire would appear to indicate that it cannot be operated at greater than 5MW thermal input without significant third-party adjustments. If this is the case, there would be no requirement to permit it in the current permit variation application and the questions in the RFI document requiring assessment of its emissions can be closed out.

Thanks – [REDACTED]

Hi [REDACTED]

Would it be possible to have a call with you to discuss some of the items in the further information request please? I'm available until around 15:00 today and then tomorrow up until 13:30 (with the exception of a short meeting 10:00 til 10:30) and Friday almost any time.

With regards to the Boiler. The boiler had been derated to 3.5 MW. The attached report provides evidence of this. Please can you confirm that this is sufficient.

Kind regards

Lisa Jobling
