1 SITE CLOSURE PLAN

1.1 DETAILS

1.1.1 The Site closure plan would be implemented in stages to cover all aspects of operation of the installation. The key aspects are listed below, which are intended to leave the Site in a satisfactory condition to allow for the eventual surrender of the Environmental Permit.

- Litter removal
- Cleaning operations
- Housing
- Fuel
- Chemicals
- Feed
- Waste Materials
- Services
- Survey

Litter

1.1.2 All litter will be removed by the operator's staff or contractors and taken off site for use on operator-controlled land as fertiliser in compliance with the manure management plan or sold with tonnages and destinations recorded.

Cleaning

1.1.3 All housing, equipment and ancillary works will be pressure washed and disinfected. Storage tanks for wash waters will be emptied and then closed.

Housing

1.1.4 Following cleaning all equipment will be stored securely with fan exhausts and ventilation shafts being covered to keep out pests.

Fuel

1.1.5 Fuel suppliers will be contacted for the removal of any remaining fuel and arrange for storage tanks to be rendered safe or removed.

Chemicals

1.1.6 Surplus chemicals remaining will be taken to an operational site or returned to the supplier. Expired chemicals will be disposed of as per manufacturer's recommendations.

Feed

1.1.7 Remaining feed will be collected by the supplier and taken to another operational site. The bins themselves will be cleaned and disinfected, before being sealed off.

Waste Materials

1.1.8 All waste materials will be recorded and then collected by registered contractors and taken for disposal or reclamation. Storage containers will be returned as appropriate and waste storage areas will be cleaned and disinfected.

Services

1.1.9 Utility services will be contacted so that supplies can be shut off.

Comparison with Baseline Survey

- 1.1.10 Upon completion of the above procedures, the condition of the Site will be compared to the original Site Condition Report. This will then determine whether the operation of the installation has caused any pollution to the site.
- 1.1.11 Any pollution determined will be the responsibility of the operator and remedied to the satisfaction of the regulator.
