

## **DP-SK- 009: Summary of Management System**

The written management system for Dovecote Park Abattoir Skellingthorpe is an accredited ISO 14001 Environment Management System.

The Environment Management System will be reviewed and updated to consider the following:

- Effluent treatment plant site operations including operating and control procedure, contingency plans and maintenance.
- The monitoring of emissions process for the effluent treatment plant, containment measures and discharge of treated effluent into the receiving surface water with reference to The Environmental Permitting (England and Wales) (Amendment) Regulations 2018 (Document Reference: DP-SK-015, DP-SK-007)

Abattoir effluent is already being produced on site and therefore the original environmental risk assessment (DP-SK-002 and DP-SK006) and odour management plan (DP-SK-005) will still be relevant but has been updated with the addition of an effluent treatment plant only. For the environmental risk assessment, see original from application (DP-SK-002). The environmental risk assessment has been updated for the addition of the effluent treatment plant and does not supersede the original risk assessment as approved previously (DP-SK-006).

All other aspects of the EMS and associated policies and procedures remain as current.
