

ST. Modwen Park Lincoln: IBAA Report 27th March 2023

Project Name:	St. Modwen Park Lincoln: Phase 4
Project No:	NTS2656
Revision:	P04
Reference:	N46-BWB-ZZ-XX-RP-YE-0008_TN
Author:	Oliver Stewart/Mike Harper
Approver:	Richard Robinson

BWB Consulting Ltd (BWB) has been instructed by Caddick Developments Ltd (the 'Client') to compile and summarise information that assesses the suitability of use of incinerator bottom ash aggregate (IBAA) on site at St Modwen Park Lincoln, Phase 4 development.

The use of IBAA on site must comply with the Environment Agency Remediation Position Statement 247: 'Using unbound incinerator bottom ash aggregate (IBAA) in construction activities: RPS 247', dated 11th April 2022. RPS247 provides a reuse scenario for use as a sub-base material (for road, external hardstandings, cycleways and footpaths), which is relevant to its use at the St Modwen Park Phase 4 development.

Supplier Information

The IBAA used on site was supplied by Blue Phoenix from their Ferrybridge site. Prior to the importation of the material, Blue Phoenix undertook a risk assessment to assess the suitability of using IBAA at the site as set out in RPS247. Blue Phoenix's risk assessment, QA testing and data sheets detailing adherence to RPS 247 criteria are included as **Appendix 1**.

A further assessment by Atkins was provided, highlighting discrepancies with the locations of IBAA usage and their proximity to planned standing water bodies of attenuation ponds. The Atkins report is presented as **Appendix 2**.

On Site Use of IBAA

IBAA has been imported to the site and used as a sub-base material within external yard and parking areas in the north of the site and also as sub-base in the footpath to the rear of Unit L110 and along the road in the east of the site. The sub-base has been placed over the subgrade that acts as a foundation layer for the bitmac base and bitmac surface course. It has a thickness of less than 0.7m. The surface course is of low permeability and durable. It has been constructed with an adequate fall to prevent standing water in all areas. Prior to its use, the IBAA was stockpiled in the north east of the site. The location of the stockpile is indicated on a plan included as **Appendix 3**.

In total, the concrete surfaced yard area was to have 1,290m³ of IBAA in a 260mm thick layer, and the tarmacked car park was to have 700m³ of IBAA in a 280mm thick layer. The locations where the IBAA has been used is presented on a plan presented as **Appendix 3**. Tickets for the imported materials are presented as **Appendix 4**.

To comply with RPS 247, which stipulates minimum distances to a watercourse and maximum volumes and areas of its use, zones of removal had to be undertaken. These have been marked along the respective zones' southern boundaries in which IBAA has been removed. IBAA has been used in the footpath to the rear and west of Unit L110 as it is of concrete, and therefore low permeability, construction and in the asphalt footpath along the road in the east of the site. Photographs of a site visit undertaken during the removal works are presented as **Appendix 5**. Re-use has been identified along areas of concrete paving and road access. The

plan of IBAA removal and reuse is present in **Appendix 3**. In total approximately 485m³ of IBAA was removed from the original placed location so that its use complies with RPS247.

Testing of the as placed material has been undertaken by Ian Farmer Associates and is presented as **Appendix 6**.

The 485m³ of IBAA removed was replaced with non-fines stone (NFS). The IBAA was reused in areas indicated within **Appendix 3** with no significant stockpiling. The IBAA has been reused in accordance with RPS247 as follows:

- As a sub-base beneath the northern car parking and loading bay areas of Unit L110;
- As a sub-base beneath the car parking to the north east of Unit L110;
- As sub-base beneath the asphalt footpath along the road located in the east of the site; and
- As sub-base beneath the concrete hardstand footpath along the southern and western margin of Unit L110.

Conclusions

Observations made on site by BWB and from information supplied to BWB, presented within this Technical Note, demonstrates that IBAA has been imported to site and used appropriately in accordance with RPS247 (for road, hardstandings, cycleways and footpaths).

	Appendix 4	IBAA Import Tickets
	Appendix 5	Site Photographs
	Appendix 6	IFA Chemical and Geotechnical Test Results

APPENDIX 1
BLUE PHOENIX DATA

IBAA Supply Site Risk Assessment Summary Report

Site Address	St Modwen Park Phase 4, Electric Avenue, Witham St Hughs, Lincoln LN6 9BJ
Customer	Jakto Transport Ltd
IBAA Dispatch Site	Blue Phoenix UK Ferrybridge - IBA Plant, Ferrybridge Power Station, Kirkhaw Lane, Knottingley WF11 8RD
Application / Use of IBAA	For use as road sub-base layers and for construction platforms under concrete slabs for new industrial units
Tonnage required	1000t for the access roads and 5000t for the construction platforms

Conditions required to supply IBAA under the Regulatory Position Statement 247	Does the supply of IBAA comply with these conditions
Site located outside groundwater source protection zones 1 and 2	Yes
Site located at least 50m from any spring, well or borehole used to supply water, including private water supplies	Yes
The IBAA to be supplied meets the relevant standard for an end use specified in the RPS 247 and will be supplied for that use	Yes
The IBAA to be supplied is not being used underneath any residential building or garden	Yes

Application types covered under the RPS 247	Conditions required to comply	Are conditions met for required application
Road sub-base	<ul style="list-style-type: none"> Width of IBAA placement is <40m The road, cycleway or footpath is covered by asphalt, concrete or other impermeable surface 	Yes
Construction or structural platform	<ul style="list-style-type: none"> Is on average laid 1m thick At least 25m from a surface water body At least 95% covered by a low permeable surface or building 	Yes
Pipe bedding	<ul style="list-style-type: none"> Up to 510 tonnes can be used in any single construction project 	N/A

Proposed uses of IBAA	Decision to supply	Reasons
Road sub-base layers (under asphalt) Construction or structural platform (under concrete)	APPROVED TO SUPPLY	This site location, proposed applications and tonnage meets all the criteria of the Regulatory Position Statement 247 for the use of unbound IBAA in certain construction activities.

Site Location

Site Address: St Modwen Park Phase 4, Electric Avenue, Witham St Hughs, Lincoln LN6 9BJ

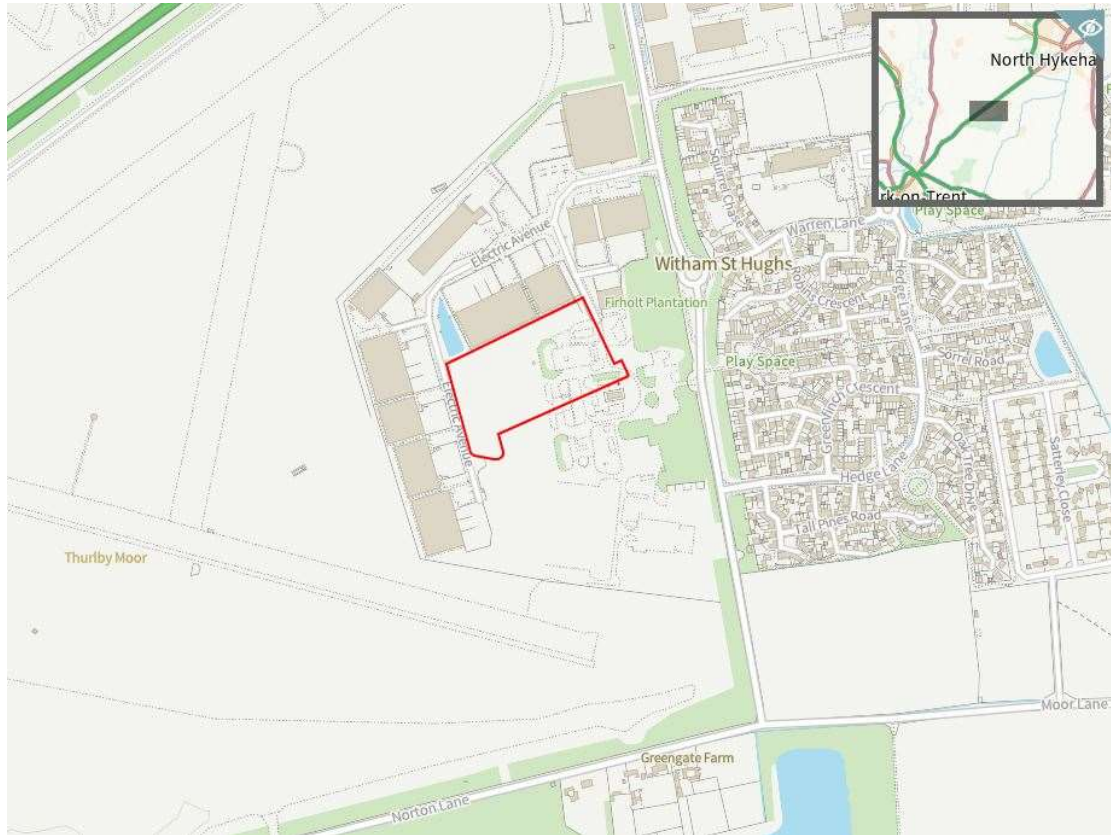

Figure 1 - Site Location Plan

Conditions required to supply under the RPS 247

- Site is located outside a groundwater source protection zones 1 or 2: Nearest is approx. 9.6km

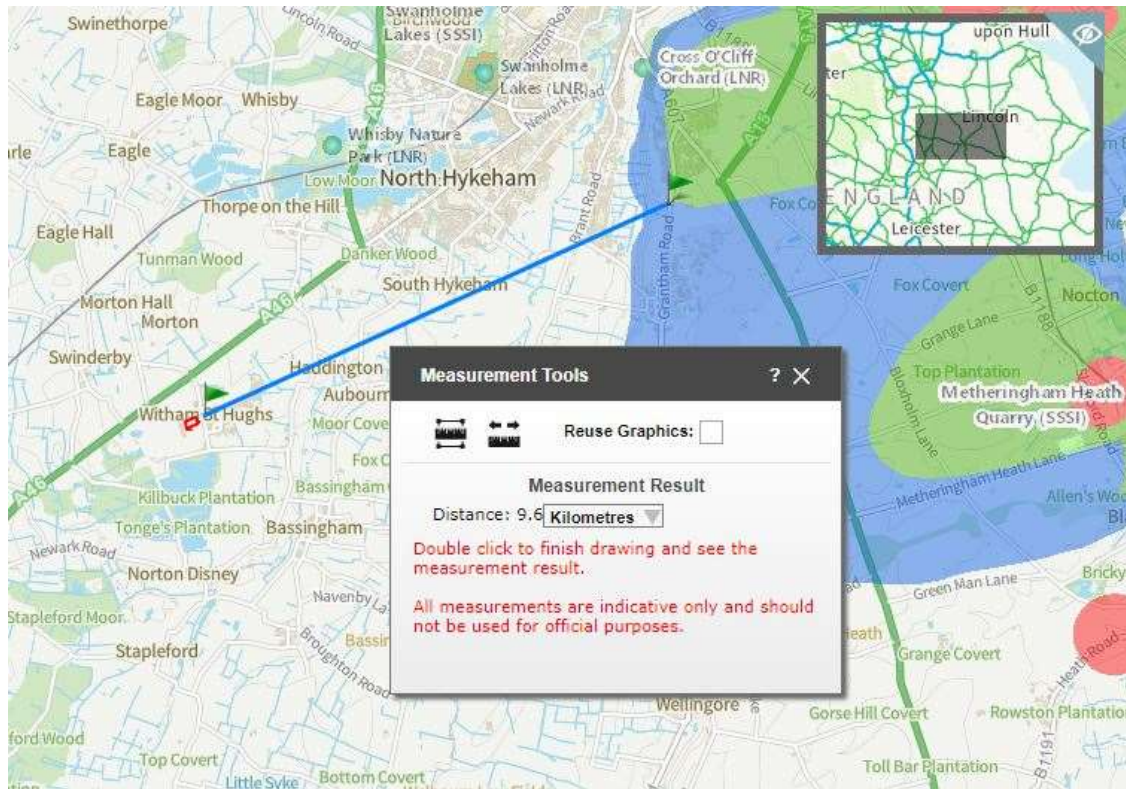

Figure 2 - Nearest groundwater source protection zones 1 & 2

- **Zone 1** - Inner Zone shown in red
- **Zone 2** - Outer Zone shown in green

A groundwater source protection zone is described by the Environment Agency as:

'We have defined Source Protection Zones (SPZs) for groundwater sources such as wells, boreholes and springs used for public drinking water supply. These zones show the risk of contamination from any activities that might cause pollution in the area. The closer the activity, the greater the risk. The maps show three main zones (inner, outer and total catchment) and a fourth zone of special interest, which we occasionally apply, to a groundwater source.'

- Distance to nearest relevant surface waterbodies:

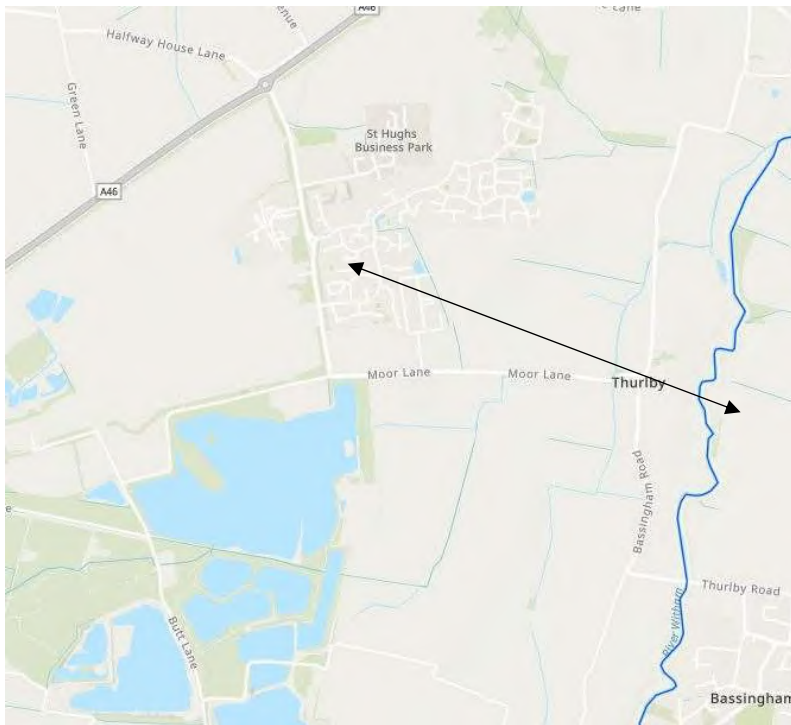

Figure 3 - Water Framework Directive Rivers Map

Figure 4 - Distance taken to nearest significant waterbody for the assessment

- The amount of IBAA you can use depends on the distance to a surface water body as shown in the following table:

Distance to water body (metres)	Maximum tonnage (tonnes) (Dry)	Volume after compaction assuming 1.7T/m ³ (m ³)	Maximum surface area of a structural platform (m ²)
25-49	4,420	2,600	2,600
50-199	6,800	4,000	4,000
100-149	13,600	8,000	8,000
150-199	20,400	12,000	12,000
200-249	27,200	16,000	16,000
250-299	34,000	20,000	20,000
300-349	40,800	24,000	24,000
350-399	47,600	28,000	28,000
400-449	54,400	32,000	32,000
450-499	61,200	36,000	36,000
More than 500	68,000	40,000	40,000

- Total maximum tonnage limit available at this site for construction or structural platforms:

Distance from Site to Nearest Relevant Surface Waterbody	Maximum Tonnage Limit Approved
237m	27,200t

- The distance was taken from the edge of the site to the nearest relevant waterbody which is a lake located to the south of the site and is a flooded quarry. This distance was used for the assessment for conservative reasons such as if material was inadvertently used within another phase.
- Distance to nearest spring, well or borehole used to supply water:
 - There are no springs, wells or boreholes supplying water within 500m of the site
 - The nearest licenced groundwater extraction is located approx. 628m South of the site at Thurlby Gravel Pit for mineral washing.
 - There are no potable water abstraction licenses within 2km of the site.
- Standard or specification IBAA meets for proposed use:

Proposed Uses	Product to be Supplied	Standard or Specification IBAA meets for Proposed Use
Road Sub-base Layers – Road Sub-base (Under Asphalt)	Type 1	SHW Clause 803
Structural Platform for Construction – Platform (Under Concrete)	Type 1	SHW Clause 803

- Designated and Habitat Sites:
 - There are no Sites of Special Scientific Interest, Special Areas of Conservation, Special Protection Areas, RAMSAR sites, local or national nature reserves onsite or within 500m, the nearest being Whisby Nature Park located approximately 4km to the north.
- The Regulatory Position Statement 247 states the following when building a road sub-base:

'You can use an unlimited quantity of unbound IBAA to build a road sub-base providing:

- *the width of the IBAA emplacement is not more 40 metres.*
- *the road, cycleway or footpath is asphalt, concrete or other low permeable material'*

The sub-base (or sub-base with capping layer) is the layer placed over the subgrade that acts as a foundation layer for the base and surface course. It must have a thickness of less than 0.7m.

The surface course must be of low permeability and durable so that it remains intact and of low permeability over the lifetime of the structure. You must build this with adequate falls to prevent standing water.

- The Regulatory Position Statement 247 states the following when IBAA is used as construction or structural platform:

You can use IBAA to build a construction or structural platform that is on average one metre thick. It must be at least 25 metres from a surface water body. At least 95% of it must be entirely covered by a low permeability surface or building.

A construction or structural platform is an engineered base for an overlying construction feature, for example a:

- *large or small building*
- *car park*
- *retaining wall*
- *storage tank*
- *road or pavement*

The base will be less than 1 metre (m) thick on average. A platform can vary from just a few square metres to tens of thousands of square metres.

The platform will be covered by a building or low permeability surface. This surface must remain intact and have low permeability over the lifetime of the structure.

Building a construction platform may include compacting incinerator bottom ash aggregate (IBAA) in a trench or other void, providing the total average depth of IBAA does not exceed 1m.

Conclusion

The approved use of IBAA at St Modwen Park Phase 4, Electric Avenue, Witham St Hughs, Lincoln LN6 9BJ meets all the criteria stated in the Regulatory Position Statement 247 and as such is considered a low-risk activity that will have a minimal impact on the environment or designated habitat sites and will reduce the use of natural aggregate.

Report compiled by:

Rebecca Williams
Senior Hydrogeologist

Incinerator Bottom Ash Aggregate – Safety Data Sheet

This Safety Data Sheet (SDS) contains information concerning the potential risks to those involved in handling, transporting, and working with incinerator bottom ash aggregate (IBAA). This information must be made available to those who may come into contact with the material or are responsible for its use.

1. Identification of Substance

1.1. Product Identifier

Incinerator Bottom Ash Aggregate (IBAA)

1.2. Relative Identified Uses of the Substance and Uses Advised Against

IBAA can be used as a replacement to natural aggregate in construction applications.

1.3. Details of the Supplier of the SDS

Blue Phoenix Limited
1 Victoria Stables
Essex Way
Bourne
Lincolnshire
PE10 9JE

1.4. Emergency Telephone Number

+441778 423345

2. Hazards Identification

- Incinerator Bottom Ash Aggregate – contact with IBAA may cause:

Irritant Contact Dermatitis and inhalation

Allergic Contact Dermatitis

- Avoid manual handling at all times as cuts, skin piercing, and abrasions can occur.
- IBAA Dust – cutting and surface treatment of materials produced from IBAA can create dust and flying fragments.
- The dust created could contain particles of respirable silica.
 - Further advice on the silica content of IBAA is available via the Blue Phoenix head office upon request.
 - When the respirable dust contains silica, the risks are increased. Extended periods of exposure to high concentrations of any dust can be hazardous to health.
- IBAA contains trace elements, which are considered negligible in the light of current knowledge.

- Very low levels of dioxin may be found in the processed aggregates, which are below known background levels (e.g. garden soils), and therefore in view of current information are not considered a significant health hazard.

3. Composition

IBA is the product of energy recovery at a range of temperatures from 800-1100°C, primarily from domestic and municipal wastes. In addition to fused and partially fused clinker, concrete, brick, ceramics there will be sharp metal objects, glass and a very small quantity of partially burnt material.

Once the IBA is processed into IBA the majority of the metal fraction is separated from the aggregates and they are sized accordingly.

IBAA presents no known biological hazards as it is a product of thermal treatment.

The composition of IBAA is variable, but a generic major phase composition for IBAA is shown below.

Oxide	Compositional Range (wt%)
SiO ₂	9.1 – 30.8
Al ₂ O ₃	2.2 – 7.3
Fe ₂ O ₃	0.41 – 15.0
CaO	0 – 12.5
MgO	0 – 3
K ₂ O	0 – 2
Na ₂ O	0.1 – 4.5
PbO	0 – 1.5
ZnO	0 – 0.3

4. First Aid Measures

4.1. Description of First Aid Measures

General information

Avoid contact with skin and eyes and avoid inhalation. If exposed to material seek first aid and medical advice.

Following inhalation

Move to an area with fresh air, seek medical advice if symptoms arise.

Following skin contact

Wash skin with copious amounts of water until all material has been removed. Seek medical advice if symptoms continue.

Following eye contact

Seek medical attention immediately. Wash eyes with copious amounts of water for at least 20 minutes. Remove contact lenses.

Following ingestion

Seek medical advice immediately. Do not induce vomiting.

Most important symptoms and effects, both acute and delayed

Skin irritation, eye irritation, soreness and shortness of breath.

5. Firefighting Measures

Suitable extinguishing media

Water, CO2 extinguishers are suitable.

Special hazards arising from the substance or mixture

Fumed heavy metals may be produced during combustion (Zn, Pb oxides) and dioxin formation may occur.

6. Accidental Release Measures

6.1. Personal Precautions, Protective Equipment and Emergency Procedures

Wear eye protection, glove, coveralls and respirator when handling material or in area containing material.

Cordon off area where practical. Brush material into plastic sacks and seal. Wash down area with plenty of water where possible. For large spillages notify authorities and dampen material where possible. Prevent entry into drains and watercourses.

See Exposure Controls/Personal Protection. For further information.

7. Handling and Storage

7.1. Precautions for Safe Handling

Protective measures

Always wear personal protective equipment when handling or working around the material. The minimum protective equipment is skin and eye protection and respirator/dust mask.

Do not eat or drink in areas surrounding the material.

The product should be handled using tools or mechanical methods where possible as opposed by hand, to avoid skin abrasions, or cuts from sharp objects.

Engineering control measures such as containment, enclosed hoppers, local exhaust ventilation should be considered when airborne dust exposure levels are approached. However, damping down is an effective means of controlling dust.

Hydrogen release potential

Storage or placement of IBAA should be in a well-ventilated area as there is potential for Hydrogen gas to be released particularly when the IBAA is in a relatively high moisture content and high pH condition.

When blending IBAA with highly alkaline materials or products (cement for example), care should be taken to ensure good ventilation as some inflammable gases may be produced.

Voids or free space in structures constructed in or immediately above IBAA must be either impervious to hydrogen ingress, or well ventilated to prevent possible hydrogen containment. Hydrogen is much less dense

than air and readily vents to atmosphere.

Further guidance is available from:

- BS 8485: 2015 Code of Practice for the design of protective measures for methane and carbon dioxide ground gases in new buildings.
- Building Research Establishment 2015. Radon: guidance on protective measures for new buildings. BR211.
- CIRIA 2007. Assessing risks posed by hazardous ground gases to buildings. CIRIA Report C665
- CIRIA 2014. Guidance on the use of plastic membranes as VOC vapour barriers. CIRIA Report C748
- CIRIA 2014. Good practice on the testing and verification of protection systems for buildings against hazardous ground gases. CIRIA Report C735
- For those constructing or working in enclosed spaces please follow the HSE link to guidance for safe working in enclosed spaces: <https://www.hse.gov.uk/pubns/indg258.pdf>

8. Exposure Controls/Personal Protection

The relevant exposure limits defined in *EH40/2005 Workplace exposure limits (HSE)* are as follows.

Workplace exposure limits	WEL (8hr TWA)
Total Inhalable Dust	10mg/m ³
Respirable Dust	4mg/m ³
Respirable Silica	0.1mg/m ³

8.1. Exposure Controls

Personal protective equipment

Eye protection

Safety glasses

Skin protection

Cut resistant gloves to be worn as a minimum. Suitable clothing to be worn to avoid contact with arms, legs and other areas of the body.

Respiratory protection

Dust masks should be worn when handling the material.

9. Physical and Chemical Properties

9.1. Information on Basic Physical and Chemical properties

IBAA is a heterogenous solid ash. The aggregate contains a wide range of elements, which do not present a hazard when used in compliance with the relevant RPS (Regulatory Position Statement) at the time of supply.

The material has an ultimate pH of between 8-9. Heat may be apparent when opening stockpiles due to ongoing hydration of the aggregate.

A slight odor may be apparent, but this presents no threat to operatives or the environment. Hydration of the IBAA can continue for some time, advice should be taken when using IBAA in an enclosed environment (see handling and storage).

Note that this product does NOT contain incineration air pollution control residues (APCR), which are classified as Hazardous Waste.

10. Stability and Reactivity

10.1. Reactivity

Stable under normal conditions.

10.2. Chemical Stability

Stable under normal conditions.

10.3. Possibility of Hazardous Reactions

May form toxic vapour when combusted.

10.4. Conditions to Avoid

Do not store in confined spaces with low ventilation. Keep away from sources of ignition.

11. Toxicological Information

In-vitro skin irritancy test

IBA has been found to be non-irritant up to pH and 1/12th alkali reserve of 13.03 based on empirical testing using reconstructed human epidermis models. IBAA, due to processing and aging, has a lower pH than IBA.

Health Effect

Inhalation of large quantities of respirable silica could lead to lung damage.

Ingestion reports

Exposure to high levels of silica dust can cause progressive lung damage.

12. Ecological Information

IBAA has been shown to contain trace heavy metals, however these forms have been shown to be predominately present in compounds unlikely to cause harm to the aquatic environment. However, trace amounts of mobile heavy metals may be present. The IBAA should be placed and stored appropriately based on an environmental risk assessment.

13. Disposal Considerations

IBAA not intended for reuse as an aggregate must undergo a full hazardous property assessment for it to be accepted for non-hazardous landfill or other waste management options. Appropriate waste regulations must be adhered to.

14. Transport Information

Transport in well ventilated containers to avoid risk of explosion. Follow the Waste Duty of Care Code of Practice.

15. Regulatory Information

Hazard Label Data: This product is **NOT** classified as dangerous for supply in the UK.

Statutory Instruments: Health & Safety at Work etc. Act 1974
Consumer Protection Act 1987
Environmental Protection Act 1990
COSHH 2002

Guidance Notes: Occupational Exposure Limits (EH40) Local Exhaust Ventilation (HS(G)37) Crystalline Silica EH59
Dust, general Principles of Protection (EH44) Control of Respirable Crystalline Silica in Quarries (HS(G)73)
Waste (E&W) Regulations 2011–1

The above publications are available from HMSO or HSE.

16. Other Information

The data and advice given above apply when the IBAA is used as intended. Use of the IBAA for other applications may give rise to risks not mentioned.

The information contained within the Safety Data Sheet does not constitute the owners own assessment of risk as required by other Health and Safety legislation i.e. COSHH 2002, MHSWR 1999.

If you have purchased the product for supply to a third party for use at work, it is your duty to take all necessary steps to secure that any person handling or using the product is provided with the information on this sheet.

If you are an employer, it is your duty to tell employees and others who may be affected of any hazards described in this sheet and of any precautions that should be taken.

Further copies of this Data Sheet may be obtained from the following: Blue Phoenix UK, 1 Victoria Stables, Essex Way, Bourne, Lincolnshire, PE10 9JZ. Telephone 01778 423345

Blue Phoenix UK

Building a sustainable future

IBAA Technical Guidance

1 Overview

Blue Phoenix UK was formed in 1996 to provide a service to the Energy from Waste industry by processing IBA (Incinerator Bottom Ash) to produce aggregates (IBAA). The company has operating sites nationwide from Teesside down to Cornwall, with long term contracts in place to recycle IBA. Since operations commenced the business has managed in excess of **nine million** tons of IBA and currently processes in excess of one and a half million tons per annum.

IBAA (Incinerator Bottom Ash Aggregate) can be used in many different applications both unbound and bound, this guidance is aimed mainly at unbound use of IBAA, but we have included a section on bound applications and further information can be provided by contacting info.uk@bluephoenix-group.com

2 Compliance

Blue Phoenix UK is accredited to BS EN ISO 14001 and all of our production facilities operate under an Environmental Permit. From a quality perspective, the company is accredited to the BS EN ISO 9001 standard. It provides customers with confidence, covering not just aggregate specification, but perceived environmental and health aspects associated with IBAA.

Working closely with our Energy from Waste partners we are driven to ensure that none of the raw material we receive goes to landfill. To do this, a well-established processing technique is applied to the raw IBA waste stream, resulting in products which are compliant with the Highways Agency Specification for Highway Works and relevant European standards (EN 13242, 13285, 12620 etc). Blue Phoenix UK also supports its customers by undertaking the **Site Supply Risk Assessments (SSRA) according to the Manufacturer's Incinerator Bottom Ash Aggregates Association's (MIBAAA) Code of Practice (CoP) to demonstrate "ceases to be a waste upon final construction use" and providing technical support.**

BPL invests time in CEN aggregate standard activity through membership of Working Groups and trade associations (MPA, Britpave, ESA), to ensure that IBAA continues to be a material option for the construction market. This also helps in ensuring we remain at the forefront of advancements in processing technology.

3 Duty of Care

Environmental Assessment

MIBAAA has developed a comprehensive method (CoP) for conducting Site Supply Risk Assessments to help ensure that no sensitive receptors are adversely impacted by the use of IBAA. This can range from a desktop assessment using a generic scenario model, to a site-specific risk assessment modelling approach. For these complex scenarios the ConSim software developed with EA will be used. This process is free of charge and fully complies with MIBAAA's CoP differing tier methodology.

BPL will provide the necessary supporting documentation in line with Health and Safety requirements including the following;

Handling & Storage

The product should be handled using tools or mechanical methods where possible, if it is going to be handled then appropriated gloves should be worn, to avoid skin abrasions, or cuts from sharp objects. Engineering controls such as containment, enclosed hoppers, local exhaust ventilation should be considered when airborne dust exposure levels are approached. However, damping down is an effective means of controlling dust. Storage or placement of IBAA should be in a well-ventilated area. When blending IBAA with high alkaline materials or products, care should be taken to ensure good ventilation as some inflammable gases may be produced.

4 Mechanical properties

As IBAA is still regarded as a relatively new product within the civil engineering and construction sector we appreciate that there is the potential for our customers to have concerns when dealing with an unfamiliar material. In addition to the standard performance related testing for aggregates we also perform some additional tests outside to the scope of specification to give peace of mind to our customers and the regulatory bodies where applicable, these can be provided on request.

4.1 Frost heave (grading, plastic limits etc.) – *BS EN 13286-4:2003*

BPL conducts Frost Heave testing on an annual basis and results of this can be provided on request. Typical values are as follows;

- IBAA is always Non-Plastic
- IBAA is Non-Frost Susceptible with a typical mean maximum heave <15mm

4.2 Swell potential – *BS EN 1744-1:1998*

We conduct testing for Swell/Expansion potential on a 6 monthly basis to demonstrate that IBAA is non-expansive. We recognise that some metals remain in the aggregate and recommend IBAA is not

wearing course asphalt due to potential oxidation of the metal. Testing of IBAA for potential swell is consistently <0.5%

4.3 Los Angeles Coefficient (LA) – BS EN 1097-2:2010

BPL tests IBAA for durability using the Los Angeles Abrasion test and results for IBAA is as follows;

- <50

4.4 Magnesium sulphate soundness - BS EN 1367-2:2009

To demonstrate Non-Frost Susceptibility, we conduct MSS annually to indicate full compliance below the 35% loss threshold set in all standards.

4.5 Classification of the constituents of Type 1 IBAA – BS EN 933-1:2012

Clause 710 of the Specification for Highways Works details permissible levels of differing constituents.

- Class X – <1
- Class Ra - <1
- Class Rg - <25

4.6 Shear box tests – BS EN 1377-1:1990

This data can be made available on request.

4.7 Determination of dry density / moisture content relationship – BS 1377-4:1990 Clause 3.7 (Vibrating Hammer)

The Vibrating Hammer method of assessing compacted density and moisture content relationship is conducted once per annum and the latest report is available upon request.

4.8 Measurement of Resistivity - BS 1377-3:1990 (Wenner Probe Method)

This is a measurement of the resistivity of materials where reinforcement will be in situ and is conducted on an annual basis and is available upon request.

5 Chemical properties

5.1 Redox Potential - *BS 1377-3:1990*

This is a measurement of the potential oxidation of compounds within recycled aggregates and again is conducted on an annual basis and is available upon request.

5.2 Leachates - *BS EN 1744-3:2002*

As IBAA is a manufactured aggregate and is derived from a non-hazardous waste, we have implemented a robust testing regime to analyse any potential leaching behaviour from our IBAA.

5.3 Sulphate contents - *BS EN 1744-1*

BS EN 1744-1 is a requirement in the Specification for Highways Works for Sulphates and is conducted on a quarterly basis, Clause 803 requires water soluble sulphate to be <300mg/l when within 500mm of metal structures and <1500mg/l when within 500mm of concrete structures.

6 Major Contract (examples)

Project	Client	Specification	Usage	Tonnage
Airfield Farm – Market Harborough	Breheny Civil Engineering	Type 1	Road Sub Base - Capping	34,000

7 FAQ's (Frequently Asked Questions)

1. *How can I use IBAA when it is classified as a waste?*

IBAA is recognised as a product following SSRA approval, in compliance with current Regulatory Position Statement (RPS).

2. *Why is IBAA not classified as a recycled aggregate?*

EN standards have reclassified IBAA as manufactured aggregate as it has been through a thermal treatment process.

3. *If you remove metals, then why is there still some metal remaining in the IBAA?*

Some metals are extremely difficult to remove via conventional Magnets or Non-Ferrous separation. BPL are working on Mechanical methods of extraction but from time to time IBAA may contain visible metals, however, still remain compliant with current UK specifications.

4. *Why is there still Paper and plastic evident in the IBAA?*

The Energy recovery process is not 100% efficient and occasionally there are traces of paper and plastics, however IBAA does conform to the Clause 710 Constituents Test within Specification for Highways Works.

5. *Are there high levels of Dioxins/PCB's present within IBAA?*

In 2002 questions were raised concerning Dioxins in IBAA, both historic and current data conclude that levels of Dioxin are typically below 10ng/kg which is below background levels.

6. *What is ConSim modelling?*

ConSim is the groundwater modelling programme developed with the Environment Agency as a robust tool for assessing materials placed in the environment and their potential impact on ground and surface water bodies.

7. *Isn't IBAA a Hazardous material?*

IBA is routinely classified as Non-Hazardous in line with the ESA (Environmental Services Association) Sampling and Testing Protocol. We cannot process IBA until we have written confirmation that the waste is non-hazardous

8. *Can IBAA left uncovered?*

Due to potential leaching behaviour IBAA must be covered with low permeable surfacing e.g. concrete or asphalt.

9. *On receipt of IBAA I couldn't help noticing a strange smell?*

Occasionally a slight odour may be detected. This dissipates over a very short period and is usually an ammonia-based odour.

10. *Are there IBAA alternatives to a traditional Type 1 graded material as a sub-base?*

Blue Phoenix are involved in research aimed at using a 0/20 product to replace the traditional CI 803 Type 1 sub-base grading and this ties in with the new SROH 0/20 grading. Other advantages include lower density than primary aggregates so lower tonnage required, lower ex works prices and improved compaction. Type 2 in certain applications may be suitable.

11. *Can IBAA be used within the construction pavements?*

IBAA can be used as a sub-base material for pavement construction and we would recommend at least 100mm (combined base and surface course) in line with Local Authority and MPA guidelines for Footpaths and Cycleways.

1. Introduction

1.1. Proposed Development & Approach

Atkins Contaminated Land and Hydrogeology (CLAH) team was retained by St. Modwen Developments Limited (SMD) to provide support to inform the safe reuse of Incinerator Bottom Ash Aggregate (IBAA) within Plot L110 of Phase 4 of the St Modwen Business Park, Lincoln, Swinderby development.

The work has been undertaken in accordance with Atkins Proposal (reference 502003/ATK/ASI05 220909), dated 9 September 2022.

Under the terms of the existing Task Order for the Phase 4 Development Completion Land Quality Statement (DCLQS), for which Atkins provide a warranty, Atkins will be required to state whether the IBAA has been placed in accordance with the project specification / regulatory guidance and manufacturers guidelines with reference to approval to others, including BWB Consultants Limited (BWB) who Atkins understand to be the primary provider of all geo-environmental services in support of Phase 4.

Drawing No. 16015 F00080 D St Modwen Park, Lincoln Master Plan (Appendix A Figure 1) and IBAA Sketch (Appendix A Figure 2) respectively show the site layout and location of each phase, and location of the placed IBAA.

1.2. Limitations

The opinions and recommendations presented within this report are based on information obtained from a variety of third-party sources detailed in the report, and information provided via KAM Project Consultants Limited (KAM) or SMD. Atkins has not been able to verify independently all third-party information and for the purposes of this assessment has assumed that such information is accurate and complete. Therefore, whilst this report and the opinions contained herein are accurate to the best of Atkins' knowledge and belief, Atkins cannot guarantee the completeness or accuracy of any descriptions or conclusions based on supplied third party information. It is also possible that the review of the reports carried out, whilst fully appropriate to meet the requirements of the brief, may not indicate the full extent of conditions across the site.

This report should be read considering the current legislation, statutory requirements and/or industry good practice applicable at the time of the works being undertaken. Any subsequent changes in this legislation, guidance or design may necessitate the findings to be reassessed in the light of these circumstances.

This report has been based on the scheme proposals current at the time of writing (i.e. to inform the construction of a warehouse, loading yard, car parking and area of soft landscaping including a pond on an area of land known as Plot L110). Should the scheme proposals change as design develops then further review will be required.

The study was conducted for SMD and this report prepared for use solely by them. Thereafter, this report shall not be relied upon, or transferred to any other parties without the express written consent of Atkins. If an unauthorised third party comes into possession of this report, they rely on its contents at their own risk.

1.3. Scope of Works

Atkins scope of work includes:

1. Review of third-party information and provide comment on the following:
 - Fulfilment of the requirements of Environment Agency guidance entitled "Using unbound incinerator bottom ash aggregate (IBAA) in construction activities: RPS 247" [1]; and
 - Suitability / appropriateness of the testing specification produced by Caddick Construction Limited (Caddick) and BWB with respect to RPS 247 and the suitability of IBAA for the intended use.
2. Following the completion of additional testing by Caddick / BWB, Atkins will prepare a Technical Note (including executive summary) commenting on the following:
 - Environmental risks and liabilities associated with IBAA use;
 - Potential risks posed to human health, controlled waters, ecological receptors and property; and
 - Proposed controls and mitigations (temporary and permanent) associated with its storage, placement and retention on-site.

This Technical Note addresses item 1: review the of the placement of the IBAA in accordance with the RPS 247 requirements and review of the testing specification proposed by Caddick and BWB.

1.4. Information Sources

The recommendations made in this report are based principally on information contained within the following sources of information:

- Current and historical online aerial imagery;
- Drawing No. 16015 F00080 D St Modwen Park, Lincoln Master Plan (Appendix A Figure 1);
- MAGIC online [2];
- 1:50,000 OS Mapping, Bing Mapping Online [3];
- Environment Maps [4];
- British Geological Survey (BGS) GeoIndex [5];
- IBAA Supply Site Risk Assessment Summary Report and enclosures, Blue Phoenix UK [6];
- Email 12 August 2022, KAM Project Consultants [7] includes NTS2565 – Phase 4 – IBAA test specification (Appendix B);
- Email 22 September 2022, Caddick Construction Limited [8];
- St Modwen Park, Lincoln, Phase 4, Use of IBAA in External Works, Peter Stevenson Consultants Limited (PSCL) [9];
- St Modwen Park Lincoln: Phase 4 Ground Conditions 14 September 2022, SMP-BWB-ZZ-XX-YE-0008, BWB Consultants Limited [10];
- Email 26 September 2022, Caddick Construction Limited [11]; and
- Email 27 September 2022, Caddick Construction Limited [12] includes Figure 2 IBAA Sketch (Appendix A).

2. Site Setting

Site details and the proposed use of the IBAA are set out below in Table 2-1.

Table 2-1 - Site Details and Circumstances of Use

Site Address	Plot L110 of Phase 4 of the St Modwen Business Park, Lincoln, LN6 9BJ.
Consignee for IBAA	Jakto Transport Limited (Earthworks Sub-Contractor) acting for Caddick Construction Limited [12].
Source of IBAA	Blue Phoenix UK Ferrybridge - IBA Plant, Ferrybridge Power Station, Kirkhaw Lane, Knottingley WF11 8RD [10] .
Development	<p>Appendix A Figure 1 presents Drawing No. 16015 F00080 D Site Masterplan which shows commercial redevelopment including the construction of warehouses, loading yards, car parking, roadways, attenuation basins and soft landscaping.</p> <p>Phase 4 (the location of the IBAA) consists of a loading yard / car parking area surfaced in concrete and asphalt in the east and a warehouse unit (Plot L110) in the west. Access to Phase 4 is possible from the north (separate entrances for loading yard and warehouse) and south (access to car park). The north of Phase 4 also has an area of soft landscaping and a feature labelled as an attenuation basin, with the south holding a pond. Pond and attenuation basin are connected by drainage that runs to the immediate west of the warehouse.</p>
Proposed Use of IBAA	<p>Used as a construction platform under concrete slabs for new industrial unit loading yard and asphalt for car parking. Appendix A Figure 2 shows the placed location of IBAA and stockpiled areas.</p> <p>Placed in a thickness of 250 mm to 400 mm [9].</p> <p>Based on Figure 1 the area where IBAA has been placed is approximately 50 m wide by 170 m and has a surface area of 8,550 m². A stockpile of circa 150 tonnes is reported as present.</p>

Quantity of IBAA Utilised	5,130.74 tonnes [8] quantity supplied by Caddick. Blue Phoenix state 1,000 tonnes for access road and 5,000 tonnes for construction platform [6] in their RPS 247 assessment. It is understood this assessment was completed before supplying the IBAA.
Made Ground	Made Ground reported as overlying Balderton Sand and Gravels to maximum depth of circa 2 m.
Superficial Geology	Balderton Sand and Gravel Member (Sand & Gravel) [5]. Reported by BWB as present to a maximum depth of 1.9 m below ground level (bgl).
Solid Geology	Scunthorpe Mudstone Formation (Mudstone & Limestone) [5].
Surface Water Receptors	OS 1:50,000 mapping [3] shows no surface water receptors within 240 m of the wider developments perimeter, the nearest being an unnamed lake 240 m south [3] [2], unnamed pond 340 m to the east and an unnamed drain 500 m north. Figure 1 shows an attenuation lagoon located 5 m north of Phase 4 in the adjacent Phase 2 plot and a pond on-site within Phase 4 located 5 m south of the boundary of the placed IBAA. Other surface water drainage features are present within the wider site.
Groundwater Source Protection Zones	None within 250 m, the nearest being Source Protection Zone 3 located 8 km to the east [2].
Superficial Aquifer	Secondary A aquifer [2].
Solid Aquifer	Secondary B aquifer [2]
Depth to Groundwater	2.1-2.4 m bgl encountered in BGS boreholes located to the north [5]. 1.83-2.76 m bgl on-site according to Atkins review of BWB's Ground Investigation reports. BWB report [10] standing water present in boreholes between 1.98 m bgl to 2.28 m bgl.
Topography	The site is generally level with an elevation of circa 14-15 m Above Ordnance Datum (AOD). Locally the topography falls slightly to the north-east / east towards the River Witham.
Estimated Groundwater Flow Direction	Based on the topography and the River Witham the regional groundwater is estimated as flowing to the east / north-east.
Ground Water Abstractions	The nearest groundwater abstraction wells are registered 240 m south-west to Cemex UK Materials Limited and approximately 1 km to the north-west and registered to G H Chennells (Farms) [4]. It should be noted that data on private abstractions has not been reviewed.
Surface Water Abstractions	None within 250 m.
Ecological Receptors	None within 250 m, the nearest being Local Nature Reserve – Whisby Nature Park approximately 4 km to the north-east [2].

3. IBAA RPS 247 Assessment

3.1. Methodology

Atkins approach has been to assess the site's circumstances, information supplied by Caddick (or on their behalf) detailing proposed use, quantity of IBAA received and controls on use such as RAMS, and information

from Blue Phoenix, the supplier of the IBAA. This information has been reviewed in consideration of the Environment Agency’s Regulatory Position Statement (RPS) 247 [1].

RPS 247 [1] states “IBAA can be used to build a construction or structural platform that is on average one metre thick. It must be at least 25 metres from a surface water body. At least 95% of it must be entirely covered by a low permeability surface or building.”

The amount of IBAA that can be used depends on the distance to a surface water body and is set out in RPS 247 [1] and reproduced in Table 3-1.

Table 3-1 – Allowable IBAA Quantities and Distance to Surface Water

Distance to water body (metres)	Maximum tonnage (tonnes) (Dry)	Volume after compaction assuming 1.7 T/m ³ (m ³)	Maximum surface area of a structural platform (m ²)
25-49	4,420	2,600	2,600
50-99	6,800	4,000	4,000
100-149	13,600	8,000	8,000
150-199	20,400	12,000	12,000
200-249	27,200	16,000	16,000
250-299	34,000	20,000	20,000
300-349	40,800	24,000	24,000
350-399	47,600	28,000	28,000
400-449	54,400	32,000	32,000
450-499	61,200	36,000	36,000
More than 500	68,000	40,000	40,000

NB – Bold font highlights where the as placed quantities of IBAA fall with respect to allowable distance to water body.

Table 3-1 highlights the distance to the nearest water body and the allowable maximum tonnages, volumes and surface areas of IBAA that could be placed in a structural platform. Based on the information supplied the tonnage (5,130 tonnes), volume (3,017 m³) and surface area (8,550 m²) of the placed material falls into the **150-199 m** band, which means that any material placed must be no closer than 150 m to a surface water body. As IBAA has been placed in a thinner layer than the 1 m maximum thickness allowed by RPS 247 the surface area covered is greater than that set out in row three of Table 3-1 and the allowable distance to water body set out in row four of 150-199 m drives the assessment.

A construction or structural platform is defined in RPS 247 [1] as an engineered base for an overlying construction feature with the following examples provided:

- Large or small building;
- Car park;
- Retaining wall;
- Storage tank; and
- Road or pavement.

RPS 247 states:

- The base will be less than 1 metre (m) thick on average and that a platform can vary from just a few square metres to tens of thousands of square metres.
- The platform will be covered by a building or low permeability surface. This surface must remain intact and have low permeability over the lifetime of the structure.
- Building a construction platform may include compacting incinerator bottom ash aggregate (IBAA) in a trench or other void, providing the total average depth of IBAA does not exceed 1 m.

For IBAA to be considered suitable for a construction aggregate products must comply with BS EN 13242 [13], in the case of St Modwen Park the IBAA is intended to be used as a Type 1 material with performance requirements set out in Series 700 Road Pavements – General and Series 800 Road Pavements – Unbound, cement and other hydraulically bound mixtures the Specification for Highways Work [14]. Testing data supplied by the producer of the IBAA (Blue Phoenix) is considered in Section 3.2.

3.2. RPS 247 Compliance Assessment

The following on-site drainage features have been identified from Figure 1 (Appendix A) and are labelled as water features:

- Attenuation Lagoon (Phase 2) 5 m to east;
- Pond (Phase 4) 5 m to west; and
- Attenuation Lagoon (Phase 4) 50 m to west.

Other unlabelled basins that also may be on-site drainage are identified in the following phases:

- Phase 6A 107 m to west;
- Phase 6A 170 m to west; and
- Phase 3 220 m west.

On-site drainage consisting of attenuation lagoons and a pond are considered by Atkins to meet the definition of a surface water and are located within 5 m of the placed IBAA.

The closest pre-existing surface water receptor is a lake (former gravel pit) 240 m to the south.

Table 3-2, Table 3-2, and Table 3-4 summarise the requirements of RPS 247 and set out how the use of IBAA at the St Modwen Park site complies with these requirements. Green fill indicates compliance with RPS 247, orange indicates an area where further information is required, while red indicates the use does not conform to RPS 247.

Table 3-2 - Producer Requirements

Producer Requirements to supply IBAA under the Regulatory Position Statement 247	Information	Does the Supply of IBAA comply with these conditions
Date of Supply	1 to 13 July 2022	Yes
Details of producer	Blue Phoenix UK Ferrybridge - IBA Plant, Ferrybridge Power Station, Kirkhaw Lane, Knottingley, WF11 8RD	Yes
Quantity Supplied	5,130 tonnes	Yes – Quantity reported by Blue Phoenix varies from quantity received by Caddick (less material delivered to site than detailed).
Statement from producer that material meets the relevant standard for and end use specified in the RPS and has been supplied for that use [6].	Blue Phoenix have completed a RPS 247 assessment that concludes “The approved use of IBAA at St Modwen Park Phase 4, Electric Avenue, Witham St Hughs, Lincoln LN6 9BJ meets all the criteria stated in the Regulatory Position Statement 247 and as such is considered a low-risk activity that will have a minimal impact on the environment or designated habitat sites and will reduce the use of natural aggregate.”	Yes

Table 3-3 - Compliance of IBAA Use with RPS 247

Conditions required to supply IBAA under the Regulatory Position Statement 247	Does the Supply of IBAA comply with these conditions
Follow the hydrogen safeguarding guidance in the Material Safety Data Sheets	Not demonstrated - RAMS and site documentation not received. PSCL report [9] considers risk from hydrogen in context of ground water levels, aluminium content and location of placement but does not assess level of risk or it's acceptability.
Comply with the guidance Dispose of business or commercial waste	Yes – Blue Phoenix documentation [6] evidences this requirement.
Comply with hazardous waste controls	Yes – Caddick email of 26 September [11] supplies non-hazardous waste assessment from Blue Phoenix. Residual risk that material analysed in stockpile is not representative of supplied material.
Store unbound IBAA safely and securely	Not demonstrated – Figure 2 (appendix B) shows IBAA stockpiled in area of use, no RAMS / controls detailing stockpile management or addressing specific risks associated with IBAA.
Health and Safety Executive precautions or other equivalent measures on use of IBAA followed	Yes – Statements and lines of evidence put forward by Caddick and Blue Phoenix that support limited aluminium content and placement in accordance with RPS addresses risk of hydrogen production. IBAA use stated by Caddick as Type 1 and not as an additive to concrete [6]. Testing on in-situ material not completed and available at time of report production.
For each delivery the producer must confirm (by doing risk assessments) that the supply meets all the conditions in RPS 247.	Yes – statement provided by Blue Phoenix that use meets requirements of RPS 247 [6].
Site located outside groundwater source protection zones 1 and 2.	Yes
At least 150 m from a surface water body – based on IBAA usage and placement on-site.	No – Attenuation lagoon (Phase 2) and pond (Phase 4) are likely to meet the definition of a surface water and are located within 5 m of the placed IBAA. Additional other on-site surface water features are also considered to be potentially present within 150 m. Closest off-site surface water is a lake 240 m to south.
Storage / use of IBAA located greater than 50 m from any spring or well, or any borehole used to supply water including private water supplies.	Yes - Search of records for private abstractions not undertaken by Blue Phoenix [6]. However, the site boundary is 140 m at closest and it is understood that there are no private groundwater abstractions present on-site.
The IBAA supplied meets the relevant standard for an end use specified in the RPS 247 and will be supplied for that use conditions.	Yes – Testing data supplied supports material being suitable for use as Type 1 and non-hazardous [9].
The IBAA to be supplied is not being used underneath any residential building or garden.	Yes

Table 3-4 - Application Types

Application types covered under the RPS 247	Conditions required to comply	Are conditions met for required application
Road sub-base	<ul style="list-style-type: none"> Width of IBAA placement is <40m. The road, cycleway or footpath is covered by asphalt, concrete or other impermeable surface. 	Not applicable
Construction or structural platform	<ul style="list-style-type: none"> It is on average laid no more than 1 m thick. 	Yes
	<ul style="list-style-type: none"> At least 150 m from a surface water body. 	No – material is placed adjacent to an attenuation basin in Phase 2 and within 5 m of a pond present within Phase 4
	<ul style="list-style-type: none"> Covered by a low permeable surface or building, surface to remain intact and have low permeability over lifetime of structure. 	Yes
Pipe bedding	<ul style="list-style-type: none"> Up to 510 tonnes can be used in any single construction project. 	Not applicable

Table 3-5 - IBAA Use Specification

Proposed Use	Product Require	Specification IBAA required to meet	Material Complies with Specification
Structural Platform to be used to support loading yard	Type 1	Specification for Highways Clause 710 and 803	Yes – data received from Blue Phoenix [6] complies with requirements for Type 1 material as per SHW

3.3. RPS 247 Compliance Conclusions

Atkins assessment, based on the quantity of IBAA supplied, the area that it has been placed over and requirements of Table 3-1, indicates that a minimum standoff of 150 m from surface water is required in order to comply with RPS 247. The submissions by Caddick and Blue Phoenix and review of the proposed usage and environmental setting indicate that if the attenuation lagoon and pond identified within 5 m of the location of IBAA placement are classified as surface waters then use of IBAA on-site is not compliant with the requirements of RPS 247.

In addition to the IBAA's distance from surface water receptors failing to comply with RPS 247, it is recommended that additional supporting information would need to be obtained in order to increase the robustness of the assessment to include:

- Testing of as received material to demonstrate the material received on-site is consistent with testing of IBAA undertaken by the supplier;
- Robust demonstration of compliance with hydrogen safeguarding guidance; and
- Robust demonstration of the safe and secure storage of IBAA prior to placement.

4. In-Situ Testing Specification

A testing specification has been put forwards by BWB to assess the compliance of the placed IBAA with the Specification for Highways Clause 803 and to assess the environmental risks posed by use of IBAA on-site. A copy of the specification is presented in Appendix A. Atkins have been tasked with commenting on the suitability and appropriateness of the testing specification with respect to RPS 247 and the suitability of IBAA for the intended use.

Table 4-1 summarised the testing, suggested frequencies and provides Atkins comment on its suitability and appropriateness.

Table 4-1 - BWB Suggest Testing Specification

Work, Goods or Material	Test	Frequency of Testing	Test Certificate	Test Appropriate (Y/N) and Comments
General requirements for unbound mixtures for adjacent to cement bound materials, concrete pavements, structures or products	Water-soluble sulphate (WS) content (N)	2 tests initially and then 1 test per 500 m ³		Yes
	Oxidisable sulphides (OS) content and total potential sulphate (TPS) content (N)	2 tests initially and then 1 test per 500 m ³		Yes
Type 1 unbound material to Clause 801 and 803 of SHW	Frost heave (N)	2 tests initially and then 1 test per 2,000 m ³		Yes
	Grading and fines content	1 per 500 m ³		Yes – Atkins would note as does PSCL that after placement there will be breakdown of the product.
	Plastic index (N)			No – Atkins have no issue with this test being completed but would note that it should be superfluous given the nature of IBAA.
	Resistance to Fragmentation (N)	2 tests initially and then 1 test per 1,000 m ³		Yes
	Resistance to wear - micro-Deval test	2 tests initially and then 1 test per 1,000 m ³	Required	Yes
	Resistance to freezing and thawing (magnesium sulphate soundness) (N)	5 tests		Yes
	Water absorption (N)	5 tests		Yes
	Volume stability of blast furnace slags	2 tests initially and then 1 test per 500 m ³		Yes
	Volume stability of steel (BOF and EAF) slags	2 tests initially and then 1 test per 500 m ³		Yes
	CBR (N)	2 tests initially and then 1 test per 500 m ³		No – we would regard in-situ CBR testing as more applicable than resistance to wear and fragmentation testing and suggest in-situ CBR tests per 500m ² of area rather than the laboratory analysis set out.

	OMC/mc (N)	1 per 500 m ³	No – material has been placed Atkins therefore would question the relevance of this test.
	Density (N)	1 per 500 m ³	No – material has been placed Atkins would question the relevance of this test.
Chemical Testing	pH	1 per 500 m ³	Yes
	Chemical composition (aluminium content)	1 per 500 m ³	Yes – Aluminium content as set out in SHW 800 Table 8/4 is based on analysis of material not passing a 14 mm sieve. We would regard this as presenting the most significant risk of hydrogen production but also there to be a risk from the material that passes the sieve depending on its chemical form.

In addition to the above analysis Atkins recommends the environmental sampling and analysis set out in Table 4-2 is completed to enable environmental risks to be assessed.

Table 4-2 - Additional Testing Recommendations

Determinands	Frequency	Justification
Environmental Soils	1 test per 500 m ³	Assess composition of material, waste classification and risks to human health posed if present outside of intended placement area.

4.1. Laboratory Testing Suite Conclusions

Atkins consider the testing set out by BWB as broadly compliant with the needs of RPS 247, however the in-situ nature of the IBAA renders some of the analysis set out as superfluous.

Atkins recommend that additional environmental sampling is completed in order to assess whether the material as received is representative of Blue Phoenix’s stockpile testing and in order to gather data that can be used to assess the risks posed by IBAA to human health, controlled waters and property and ensure compliance with the planning regimes requirements.

Appendices

Appendix A. Drawings

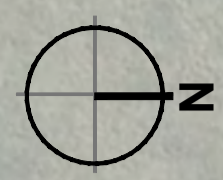

- A.1. Figure 1 - Drawing No. 16015 F00080 D St Modwen Park, Lincoln Master Plan

- A.2. Figure 2 – IBAA Location Sketch

- Dimensions are in millimeters, unless stated otherwise.
 - Scaling of this drawing is not recommended.
 - It is the recipient's responsibility to print this document to the correct scale.
 - All relevant drawings and specifications should be read in conjunction with this drawing.

DETERMINATION OF THE RESISTANCE TO WEAR (micro-Deval) - BS EN 1097-1 : 2011

Introduction

We refer to a bulk sample taken from SMP Lincoln Phase 4 IBAA and delivered to our laboratory on 21st October 2022.

Material & Source

Sample Reference : IBAA01, B1, 0.00m
Sampled By : Client
Sampling Certificate : Not Supplied
Location : IBAA01, B1, 0.00m
Designation (d/D) : Not Supplied
Description : Light grey / off-white CRUSHED CONCRETE
Date Sampled : 28th September 2022
Date Tested : 21st October 2022 Onwards
Source : 2220827A - SMP Lincoln Phase 4 IBAA
Size Fraction : 10mm to 14mm
Test Condition : Wet

Test Results

Test Specimen 1	24.9
Test Specimen 2	22.5
micro-Deval coefficient, M_{DE}	24

Comments

The results contained in this test certificate relate to the sample(s) as received
Opinions and interpretations expressed herein are outside the scope of UKAS accreditation
This test certificate should not be reproduced without the written approval of the laboratory
All remaining samples for this project will be disposed of 7 days after issue of this test certificate

Remarks

Approved for Issue

T McLlland (Director)

LABORATORY TEST REPORT

Date: 04/03/2022

Page 1 of 2

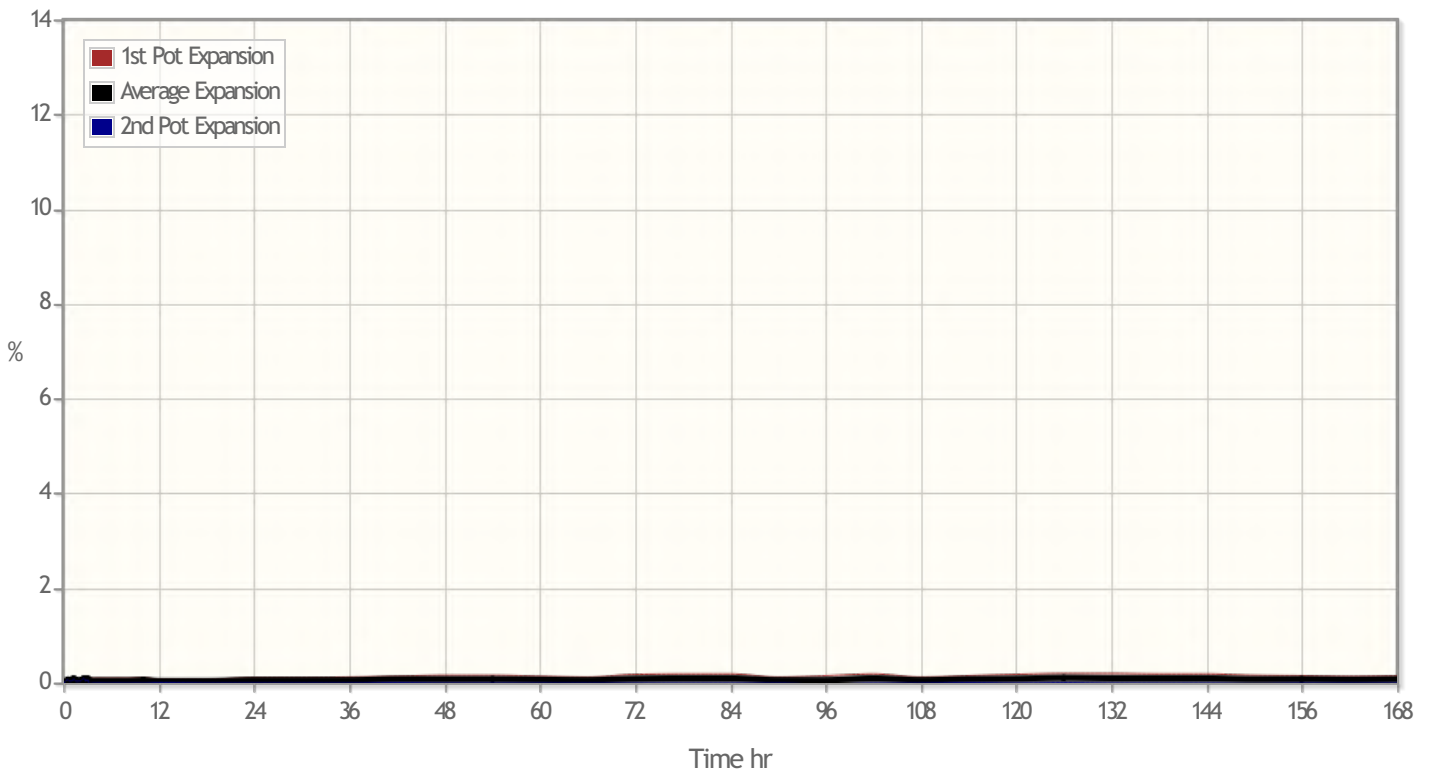

Test Requirements: To determine the volume stability of steel slag in accordance with **BS EN 1774-1**

Sample Details:

Report Id: **20220225-1**
Sample Ref: **Blue Phoenix Feb2022**
Sample Origin: **Ferrybridge (Blue Phoenix Ferrybridge)**
Order Number: **30609**
Slag Type: **0-14mm**
Date Sampled: **February 2022**
Date Tested: **25/02/2022**
Slag Condition: **Unknown Year(s) Unknown Month(s)**

Voids Content: **29.08%**

Maximum Expansion: **0.11%**

Laboratory Report No : **ARC/10685**

Tests Carried out at: **Doncaster Laboratory**

The test results included in this certificate relate only to the samples as tested. Every care should be taken to ensure samples are representative of the material to ensure test results are meaningful. Testing was performed in a temperature controlled laboratory at 20±5°C

Determination of the Expansion of Steel Slag

IFA Number	Client Reference	Class / Description	Source of Sample	Sampling Details	Certificate of Sampling Attached?
M15515-1	Type 1	IBAA	Cory Riverside	Sampled by Client on 20/01/22	NO

	Sample 1	Sample 2	
Particle Density	2.38		Mg/m ³
Mass of Sample Used	4544.30	4521.20	g
Compaction Method	Vibrating Hammer		
Volume of Test Portion	2531	2518	cm ³
Conditions to Enduce Expansion	Steam Tank		
Dry Density of Test Portion	1.80	1.80	Mg/m ³
Voids Content of Test Portion (25 ± 3%)	24.5	24.5	%
Duration of Test	168	168	hrs
Expansion of Each Sample	0.6	0.3	%
Average Expansion of Sample as a Percentage of Volume	0.5		%

Remarks:

Method of Preparation: BS 1377 : Part 1 : 2016 : Clause 8.4.4 Preparation of samples for particle density tests
BS EN 1744 : Part 1 : 2009 + A1: 2012 : Clause 19.3.4 Preparation and compaction of the specimens

Method of Test: BS 1377 : Part 2 : 1990 : Clause 8.2 Determination of particle density (Gas jar method)
Broadly based on BS EN 1744 : Part 1 : 2009 + A1: 2012 : Clause 19.3.5 Determination of the expansion of steel slag

Result reported relates only to the sample tested.
