

To Whom it concerns.

### Confidentiality Justification

There is one document within the submission that is considered confidential and commercially sensitive.

### Operating and Maintenance Manual.pdf

This document includes a detailed explanation of equipment utilised in the process, suppliers, and a detailed description of how the process is completed.

The document is designed as an instruction manual for staff members and as such includes a number of confidential elements that only internal Enva staff would be aware of.

- PID examples
- Chemical names and references
- Process approach including specific order in which confidential activities take place
- Detailed descriptions of specific plant and equipment.

With this document it would be possible to replicate our process and as such should be considered confidential.

Regards

Michael Sneath

Director.
