

Proposed Changes

Operator at Woodside Farm is proposing to add an additional aviary system poultry house for free range laying hens. Current house one is a deep pit laying house which is to be converted to an aviary system with litter belt removal, house 3 is to change the ventilation from gable extraction to high velocity roof fan. This will increase permitted numbers for free range layers to 108,000 all reared in aviary systems. No changes to drainage on the existing three houses. Additional ground to be included in the installation boundary for the increased ranging area.
