

Downmore Farm Poultry Unit

The installation at Downmore Farm Poultry Unit will be able to meet all the new relevant BAT conclusions along with the new BAT AEL's.

A nutritional strategy will be employed reducing the levels of N and P

This will be verified by means of manure analysis and reported annually along with dust emissions based on the standard emission factor for broilers.

NH₃ emissions will be calculated using the standard emission factor and reported annually.

Odour monitoring will be conducted weekly at the installation boundary by means of sniff testing by persons not directly involved in the poultry production.
