

Veolia ES (UK) Ltd
Norwich Waste Management Facility
EPR/KB3105FM

Non-Technical Summary

The site at Longwater Trading Estate, Cotessey was purchased by Veolia from EMR as a non operational former metal recycling site with two extant bespoke metal recycling permits (KB3105FM & KB3105GU. Since acquisition the site has not been operational and the two permits have been transferred from EMR to Veolia.

The permits were consolidated and varied in May 2023 removing all conditions and adding a standard rules SR2015 No6 rule set. The site has been operational during the second half of 2023 without issue or complaint.

This application is now to vary the standard rules permit into a bespoke waste activity in order to increase the annual tonnage throughput from 75,000 tonnes to an aspirational 150,000 tonnes and to add an external bay for the storage of baled and wrapped refuse derived fuel (RDF) prior to export or transport to a domestic energy recovery facility. Other aspects of the permit including permit boundary remain unchanged. The agreed Fire Prevention Plan has been updated and a bespoke Risk Assessment, Dust Emissions Management Plan and Odour Management Plan are provided to support the application.
