**Attachments:** Raw Materials List.xls; Dust management plan.docx; Operating techniques.pdf

Hi George,

I have reviewed the revised installation boundary plan and can see you have removed the residential receptors from the boundary. Can you confirm whether any operations relating to the installation have been carried out on any of these areas of land in the past please?

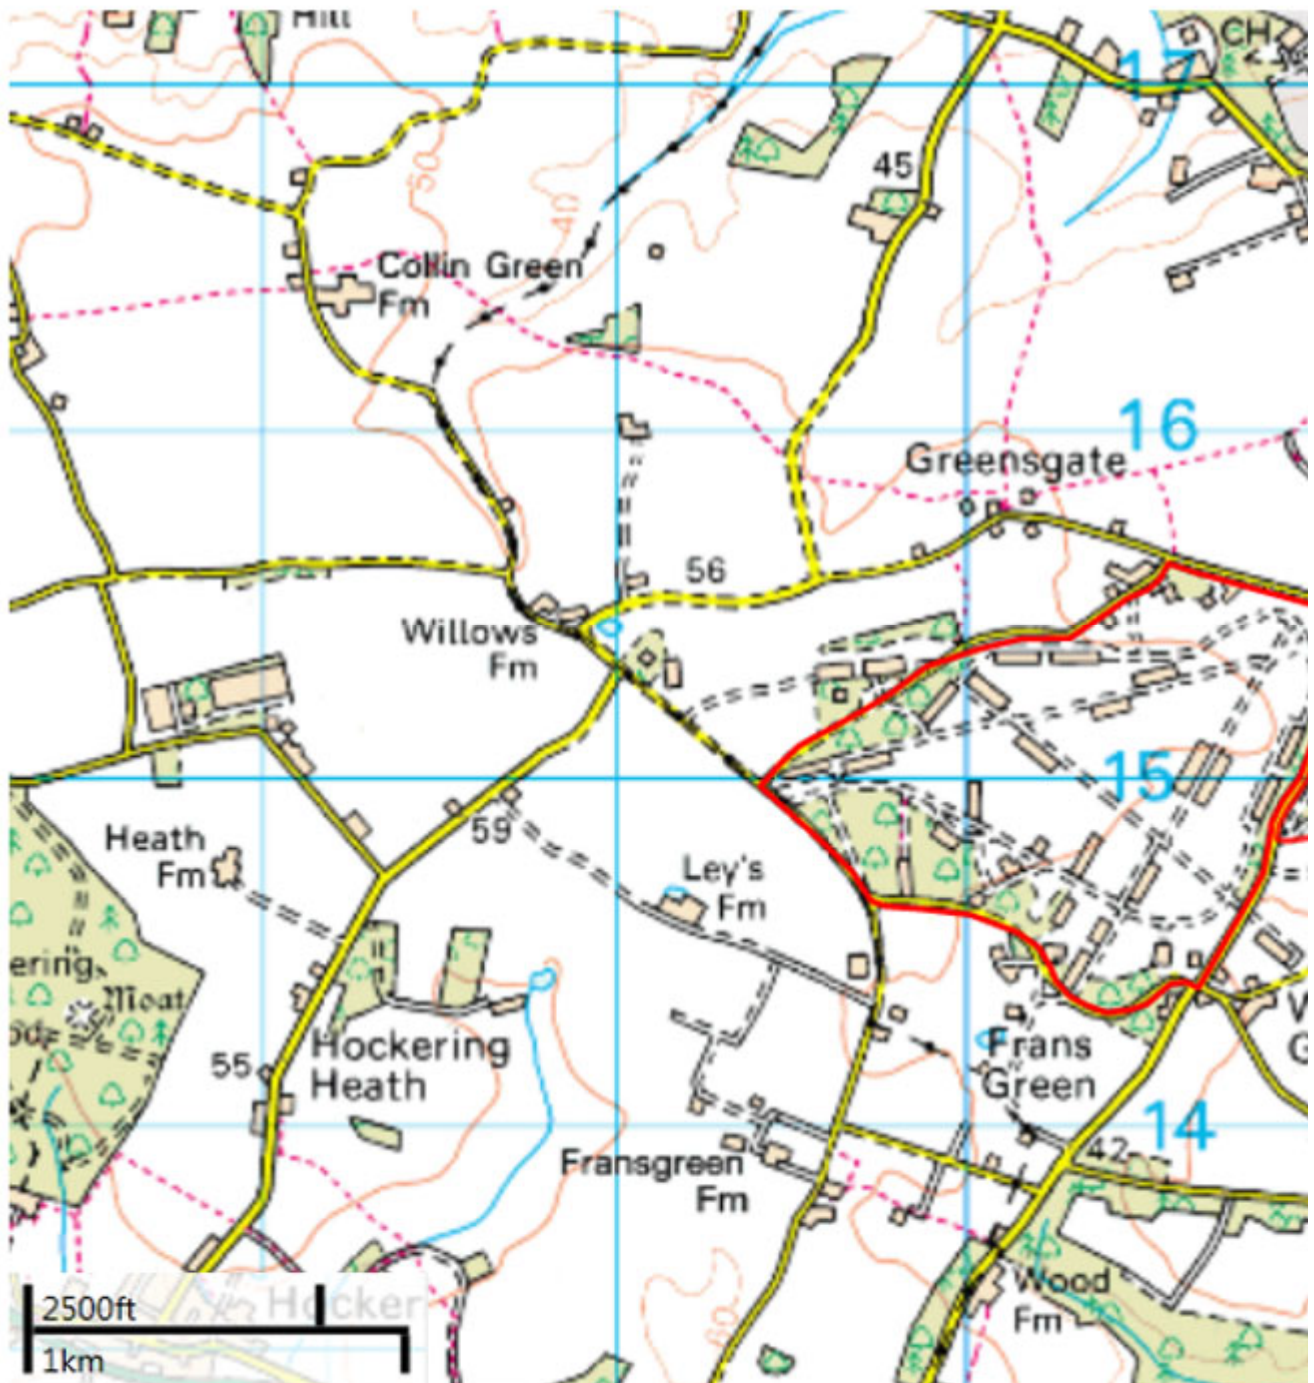

Can you submit a revised boundary plan in OS format or similar please, as with the current boundary plan (see below), as the CAD drawing is not suitable to include in schedule 7 of the permit. You will need to include the installation boundary, clearly shown in green if possible, the numbered poultry houses, a scale and north arrow. The revised plan needs to reflect the boundary below but remove the areas where the residential properties are located as you have done on the CAD drawing. There appears to be an additional area of land shown on the CAD drawing which is not part of the current permitted boundary so can you make sure this is not included on the revised plan please:

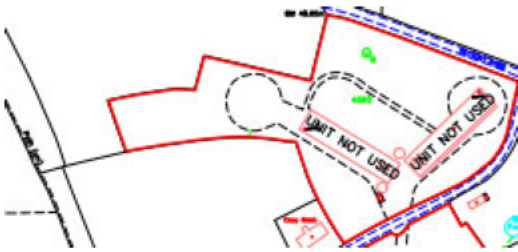

Site boundary plan from 2018 variation:

# Schedule 7 – Site plan

Site plan - showing installation boundary as referred to in condition 2.2.1.

In terms of the site drainage plan, can you amend the CAD drawing to clearly show the installation boundary, in green if possible, drainage route for each separate poultry house to the dirty water tanks in red and the drainage route of uncontaminated roof and yard water for each poultry house to soakaway in blue, as described in the current permit, along with the location of the fuel tanks, feed silos, standby generator, and ventilation fans on each house (roof and side). Again, can you make sure it is clear on the drawing that the area of land below is not part of the installation boundary:

I have looked back at the previous variation application for the installation and have found a copy of the Technical standards document, raw materials inventory and dust management plan (see attached). Can you please check these and revise them where necessary to reflect any changes or additions to operating measures since they were written and to reflect any additional measures required as a result of the addition of ducks at the installation.

I have not been able to find the a copy of the previous risk assessment (ERA) so please submit a revised ERA, in accordance with question 2 below.

Can you also confirm when the payment has been made so I can check it has been received.

Once I have received the above information and payment and the additional information requested below I will be able to duly make the application. The deadline for submitting this information and payment is 21/09/23.

Please 'reply to all' when replying to this email so it is saved into our systems correctly.

Please let me know if you have any questions.

Kind regards  
Kate
