Report No 23015/2 – March 2023
Mossdown Road Transfer Station, Royton: Site Condition Report

1. SITE DETAILS	
Name of the applicant:	Wheeldon Brothers Waste Limited
Activity address:	Mossdown Road Royton Oldham Greater Manchester OL2 6HS
National grid reference:	SD 93626 07152
Permit number	Waste Management Licence WML/53932
Document reference and dates for Site Condition Report at permit application:	Site Condition Report No 23015/2 Original Version, March 2023
Document references for site plans (including location and boundaries):	Drawing No 23015-01 – Site Location Plan Drawing No 23015-02 – Site Layout Plan Drawing No 23015-03 – Receptors Drawing No 23015-05 – Soil Sample Location Plan (Appendix E)

2. CONDITION OF THE LAND AT PERMIT ISSUE	
<p>Environmental setting including:</p> <ul style="list-style-type: none"> • geology • hydrogeology • surface waters 	<p>Wheeldon Brothers Waste Limited (WB) have operated the Transfer Station located at Mossdown Road since 1991. The transfer station is located in an industrial estate to the east of Royton. Industrial operators abound the site to the north, west and south including other waste facilities (ie vehicle dismantlers and vehicle depollution facilities). Royton Moss is approximately 60 m to the east which is listed as priority habitat for lowland fens. An ephemeral channel of the River Beal runs through Royton Moss, approximately 60 m east.</p> <p>WB have acquired additional land to the north-east of their transfer station and a permit variation is required to add this land to their existing permit. The original permit boundary covers an area of 4,330 m². The new land to the north-east of the original permit area increases the permit area to 10,280 m². A SCR is required for the additional area. For the purposes of this SCR, the additional land to be included in the permit is referred to as ‘the site’.</p> <p>The site includes a large open fronted processing building, storage area and workshop.</p>

Report No 23015/2 - March 2023
Mosstown Road Transfer Station, Royton: Site Condition Report

	<p>The majority of the site is concrete sealed. A small area in the east is compacted hardstanding (shown on Drawing 23015/02).</p> <p>Photographs taken in March 2023 showing the site are included in Appendix A.</p> <p>Superficial Geology Till, Devensian - Diamicton.</p> <p>Bedrock Geology Pennine Lower Coal Measures Formation - Mudstone, siltstone and sandstone. This site is listed as being within a Coal Mining Affected Area (ie likely affected by coal mining activity).</p> <p>Hydrology A channel of the River Beal is approximately 60 m to the east of the permit boundary within Royton Moss; likely an ephemeral channel.</p> <p>Surface water at the site is managed via a contained drainage system which directs surface water to an interceptor before being discharged to foul sewer by automatic pumping station.</p> <p>Hydrogeology The till superficial strata underlying the site are classified as 'Secondary Aquifer - Undifferentiated' (formerly known as 'Unproductive Aquifers'). The underlying sandstone bedrock is classified as a 'Secondary A Aquifer'.</p>
<p>Pollution history including:</p> <ul style="list-style-type: none"> • pollution incidents that may have affected land • historical land-uses and associated contaminants • any visual/olfactory evidence of existing contamination • evidence of damage to pollution prevention measures 	<p>Site History Historic OS maps contained in Appendix B shows the site.</p> <p>The earliest map is from 1894 and shows an old clay pit in marshland in the north-west of the site, and a field with a track which leads through the east of the site to some dog kennels to the north of the site.</p> <p>By 1953 the clay pit looks further developed. To the north industrial development has commenced.</p> <p>By 1966 the majority of the site has been infilled and raised above the surrounding Royton Moss. The site is labelled as a scrap metal yard and there is a large building in the west of the site where the existing office/workshop/storage building is located. The east of the site is still marshland. The adjacent land to the west (ie WB transfer station) is also labelled as a scrap yard.</p> <p>An historical OS map for 1992 shows the scrap metal yard is still present at the site, as is the adjacent scrap yard.</p>

Report No 23015/2 - March 2023
Mosstown Road Transfer Station, Royton: Site Condition Report

An aerial photograph for 2000 shows the western part of the site is partially covered by scrap vehicles. The eastern section of the site is vacant.

Google Earth images are available from 2000. These have been viewed and described below, with selected images presented in Appendix B.

2005 shows an open fronted building adjacent to the office/workshop and skips in the yard.

2016 shows that the open fronted building has extended and is now configured as is currently. There is a large amount of waste stockpiled in the yard which extends off the site to the south. Images from 2017 and 2018 shows that stockpiled waste covers the majority of the site and is also shown around the processing building.

2019 shows that there is less waste stockpiled in the building; there is still a large amount of waste stockpiled outside in the yard to the east and south, and which extends southwards off the site into the adjacent Royton Moss. By 2020, images show that stockpiled waste has been removed from the site, and there is a small area of hardstanding in the east of the site. Stockpiled waste is still present to the south of the site.

2021 show a new steel wall that WB have erected around the east of the site which separates the remaining stockpiled waste to the south of the site, which is still present.

Historical Landfill/Waste Activities

An Envirocheck Report has been obtained to provide details of any licensed waste activities on or around the site. These are detailed below. The Envirocheck Report is contained in Appendix C along with a location plan.

A historical landfill is located in the east of the site covering an area of approximately 1,080 m² and extending to the east and south into Royton Moss. The landfill permit was held by Seddon Atkinson Vehicles Ltd (Ref: EAHLD15975) between 1978 and 1984 and was for the deposit of inert and industrial waste. At commencement of permitted activities by WB, this area of the site was infilled with inert waste as shown in Photographs in Appendix B, labelled as 'hardstanding' on Drawing No 23015/02.

A waste management licence (Ref: 50096) for the Mosstown Road Transfer Station was issued to Northern Recycling and Waste Ltd in 2002 for a special waste transfer station on site. This licence was revoked in 2017.

Report No 23015/2 – March 2023
Mosstown Road Transfer Station, Royton: Site Condition Report

	<p>An additional licence was also held by Northern Recycling and Waste Limited at the site for a mixed metal recycling site (Ref: 53475). This licence was issued in 1998 and is listed as ‘expired’.</p> <p>A licence for a scrapyards at the site was issued to E Connell (00648/M01/T01) in 1998. There are no details regarding the status of this licence, although this activity is listed as being inactive under Trade Directories.</p> <p>Potentially Infilled Land</p> <p>Envirocheck have listed a small area of the site in the north-west as potentially infilled land (ie a pit or quarry) which corresponds with the clay pit shown on the historical maps.</p> <p>Reference to OS historical maps also shows that the site has been infilled and raised to form a level area.</p>
<p>Evidence of historic contamination, for example, historical site investigation, assessment, remediation and verification reports (where available)</p>	<p>Whilst historical stockpiled waste has been removed from the buildings and from the yard at the site by WB since 2020, a large stockpile of waste is still present to the south of the site as shown on site photos in Appendix A and aerial images in Appendix B.</p>
<p>Baseline soil and groundwater reference data</p>	<p>Three shallow surface soil samples were collected on the 22nd February 2023 in the north-east of the site where surface conditions would allow, to provide baseline conditions prior to commencement of waste activities by WB at the site. Sample locations are shown on Drawing No 23015/05 with descriptions of the materials encountered as follows:</p> <p>S1: 100 mm soft ground above compacted hardcore. Soft ground comprised gravelly soil, stone, crushed brick (393685 E, 407134 N)</p> <p>S2: 100 mm soft ground above compacted hardcore. Soft ground comprised gravelly soil, stone, crushed brick (393691 E, 407131 N)</p> <p>S3: 150 mm soft ground above compacted hardcore. Soft ground comprised soil, stones, crushed brick, soft plastic, textiles, evidence of general waste deposit (393679 E, 407131 N)</p> <p>Laboratory analysis was conducted on the three soil samples collected including heavy metals, asbestos, polycyclic aromatic hydrocarbons (PAHs), total petroleum hydrocarbons (TPHs). Laboratory results are provided in Appendix D.</p> <p>Results show low levels of metals and PAH’s and no asbestos was detected. TPH was slightly elevated in two of the three samples with concentrations of 974 and 1040 mg/kg.</p>

3. PERMITTED ACTIVITIES	
Permitted activities:	Deposit, storage and treatment of household, commercial and industrial waste.
Non-permitted activities undertaken:	None
Document references for: <ul style="list-style-type: none">• plan showing activity layout;• environmental risk assessment.	Drawing No 23015/02, Site layout Plan Risk Assessment V1, November 2022

Lancashire And Furness

Published 1894

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

APPENDIX D

Laboratory Results

FINAL ANALYTICAL TEST REPORT

Envirolab Job Number: 23/01681
Issue Number: 1

Date: 06 March, 2023

Client: Arley Consulting
Chorleian House
49-51 St Thomas Road
Chorley
PR7 1JE

Project Manager: Michelle Birkett
Project Name: Wheeldon Brothers
Project Ref: 23015
Order No: 7626/23015
Date Samples Received: 23/02/23
Date Instructions Received: 27/02/23
Date Analysis Completed: 06/03/23

Approved by:

Richard Wong
Client Manager

Envirolab Job Number: 23/01681

Client Project Name: Wheeldon Brothers

Client Project Ref: 23015

Lab Sample ID	23/01681/1	23/01681/2	23/01681/3					Units	Limit of Detection	Method ref

REPORT NOTES

General

This report shall not be reproduced, except in full, without written approval from Envirolab.
 The results reported herein relate only to the material supplied to the laboratory.
 The residue of any samples contained within this report, and any received with the same delivery, will be disposed of six weeks after initial scheduling. For samples tested for Asbestos we will retain a portion of the dried sample for a minimum of six months after the initial Asbestos testing is completed.
 Analytical results reflect the quality of the sample at the time of analysis only.
 Opinions and interpretations expressed are outside the scope of our accreditation.
 If results are in italic font they are associated with an AQC failure, these are not accredited and are unreliable.
 A deviating samples report is appended and will indicate if samples or tests have been found to be deviating. Any test results affected may not be an accurate record of the concentration at the time of sampling and, as a result, may be invalid.
 The Client Sample No, Client Sample ID, Depth to Top, Depth to Bottom and Date Sampled were all provided by the client.

Soil chemical analysis:

All results are reported as dry weight (<40°C).
 For samples with Matrix Codes 1 - 6 natural stones, brick and concrete fragments >10mm and any extraneous material (visible glass, metal or twigs) are removed and excluded from the sample prior to analysis and reported results corrected to a whole sample basis. This is reported as '% stones >10mm'.
 For samples with Matrix Code 7 the whole sample is dried and crushed prior to analysis and this supersedes any "A" subscripts
 All analysis is performed on the sample as received for soil samples which are positive for asbestos or the client has informed asbestos may be present and/or if they are from outside the European Union and this supersedes any "D" subscripts.

TPH analysis of water by method A-T-007:

Free and visible oils are excluded from the sample used for analysis so that the reported result represents the dissolved phase only.

Electrical Conductivity of water by Method A-T-037:

Results greater than 12900µS/cm @ 25°C / 11550µS/cm @ 20°C fall outside the calibration range and as such are unaccredited.

Asbestos:

Asbestos in soil analysis is performed on a dried aliquot of the submitted sample and cannot guarantee to identify asbestos if only present in small numbers as discrete fibres/fragments in the original sample.
 Stones etc. are not removed from the sample prior to analysis.
 Quantification of asbestos is a 3 stage process including visual identification, hand picking and weighing and fibre counting by sedimentation/phase contrast optical microscopy if required. If asbestos is identified as being present but is not in a form that is suitable for analysis by hand picking and weighing (normally if the asbestos is present as free fibres) quantification by sedimentation is performed. Where ACMs are found a percentage asbestos is assigned to each with reference to 'HSG264, Asbestos: The survey guide' and the calculated asbestos content is expressed as a percentage of the dried soil sample aliquot used.

Predominant Matrix Codes:

1 = SAND, 2 = LOAM, 3 = CLAY, 4 = LOAM/SAND, 5 = SAND/CLAY, 6 = CLAY/LOAM, 7 = OTHER, 8 = Asbestos bulk ID sample, 9 = INCINERATOR ASH.
 Samples with Matrix Code 7 & 8 are not predominantly a SAND/LOAM/CLAY mix and are not covered by our BSEN 17025 or MCERTS accreditations, with the exception of bulk asbestos which are BSEN 17025 accredited.

Secondary Matrix Codes:

A = contains stones, B = contains construction rubble, C = contains visible hydrocarbons, D = contains glass/metal,
 E = contains roots/twigs.

Key:

IS indicates Insufficient Sample for analysis.
 US indicates Unsuitable Sample for analysis.
 NDP indicates No Determination Possible.
 NAD indicates No Asbestos Detected.
 N/A indicates Not Applicable.
 Superscript # indicates method accredited to ISO 17025.
 Superscript "M" indicates method accredited to MCERTS.
 Subscript "A" indicates analysis performed on the sample as received.
 Subscript "D" indicates analysis performed on the dried sample, crushed to pass a 2mm sieve
 Subscript "A" indicates analysis has dependant options against results. Testing dependant on results appear in the comments area of your sample receipt.
 EPH CWG results have humics mathematically subtracted through instrument calculation
 TPH results "with Cleanup" indicates results cleaned up with Silica during extraction

EPH CWG GCxGC ID from TPH CWG

Where we have identified humic substances in any ID's from TPH CWG with Clean Up please note that the concentration of these humic substances is not included in the quantified results and are included in the ID for information.

Please contact us if you need any further information.
