Hi Simon

Non-Tech summary/C3.5 form ; are both correct 134,000 with all houses complete with high velocity exhaust roof vents (efflux velocity 7m/s)
The client changed their requirements post the pre application.

Regards

Steve

Good afternoon

I have picked up this next substantial variation for validation#

There is a difference between non-tech summary /C3.5 form and ammonia advice request for overall bird numbers

Non-Tech summary/C3.5 form ; appears to say 134,000 with all houses complete with high velocity exhaust roof vents (efflux velocity 7m/s)

Ammonia advice ; states 140,000 pullets . 70,000 HV and 70,000 side ventilation(efflux velocity 7 m/s)

Please can you confirm what is accurate and adjust non-tech summary accordingly

If the ammonia screening is wrong we will redo when clear

More specific duly making questions to follow.

Thanks in advance
