2.0 Condition of the Land at Permit issue	
Environmental setting including: Geology Hydrogeology Surface Waters	The poultry unit lies on level ground to the southeast of Grimston. Predominant land use is arable farming. Field pattern is semi large scale with a strong pattern of field boundaries. There are sensitive receptors within 400m of site.
	Topography and Drainage
	The poultry houses are between 40 and 45 metres above sea level. Soil bunding and tree planting will help to minimise the visual intrusion normally associated with poultry units. Site clean water drainage all goes to a swale acting as a soakaway.
	Geology and Hydrogeology
	According to the BGS Extract British Geological Survey map shows that the Bedrock geology comprises Holywell

	Chalk formation and New Pit Chalk Formation-Chalk, of the Cretacious period. Searches indicate the site is underlain with a Bedrock Aquifer - Principal. No Superficial drift aquifer. The Site is situated in a Groundwater Vulnerability Zone - High. The site is situated within a Surface Nitrate Vulnerable Zone. The site is situated in a Groundwater/Source water protection zone 1. The site is not situated in a drinking water protection/safeguard zone Hydrology General drainage is in a north-westerly direction. Average rainfall for this area is 1100 mm.
Pollution history including:	
Pollution incidents that may have affected land	None noted
Historical land uses and associated contaminants	Polluting substances – None noted Previous use prior to 2025 – Turkey Breeder Rearing.
Any visual/olfactory evidence of existing contamination	None noted
Evidence of damage to pollution prevention measures	None noted
Evidence of historical contamination	N/A

This will give a total of 193,000 places. Heating will be provided by LPG heaters. Heat exchangers fitted to all houses. The working area where vehicles operate is laid to concrete. Feed is delivered in covered lorries and stored on site in vermin proof steel galvanised bins. Immediately following depopulation, litter is removed off site and sold. The houses are then washed and disinfected prior to the cycle beginning again. Underground storage tanks have been installed to catch all wash waters. Dead birds are removed from the houses and stored in sealed containers awaiting collection. Diesel fuel storage is in a bunded integral tanks in the standby generator.
