Appendix 1 Envirocheck Report

DRAWINGSTITLESCALEBM12446-001Permit Boundary Plan1:1000

#### 1 INTRODUCTION

- 1.1.1 Altilium Metals Ltd have commissioned Wardell Armstrong LLP to prepare a Site Condition Report for their Pilot Facility, Units 1 & 2, Plymbridge House, Estover Road, Plymouth, PL6 7PY
- 1.1.2 Using state-of-the-art equipment, Altilium Metals Ltd have designed their innovative process to treat waste black mass from end-of-life lithium-ion Electric Vehicle (EV) batteries to recover the constituent materials via sequential hydrometallurgical processes, and subsequently use the recovered materials in the production of metal oxide, namely cathode active material, for trial-scale supply to manufacturers of new EV batteries.
- 1.1.3 The recovery of critical minerals such as lithium, graphite and cobalt fall within the scope of the Government's Critical Minerals Strategy, and the scheme will support a circular economy of critical minerals. Additionally, the processes also recover minerals on the UK watch list, including manganese and nickel.

#### 2 SITE LOCATION AND SETTING

Site details	
Name of the applicant	Altilium Metals Ltd
Activity address	Units 1 & 2, Plymbridge House, Estover Road,
	Plymouth, PL6 7PY.
National grid reference	SX 51606 59801.
Document reference	BM12446/008 Site Condition Report V1
Dates for Site Condition Report at permit application	24/10/2024
Document references for site plans (including	BM12446-001-P0.
location and boundaries)	

- 2.1.1 The site comprises a building in which all operations are contained. The site is located within Estover Industrial Estate within a highly urbanised part of Plymouth, the nearest residential receptors are on Forget Me Not Lane 380m to the northeast of the site.
- 2.1.2 The site location and permit boundary are shown on drawing BM12446-001-P0.

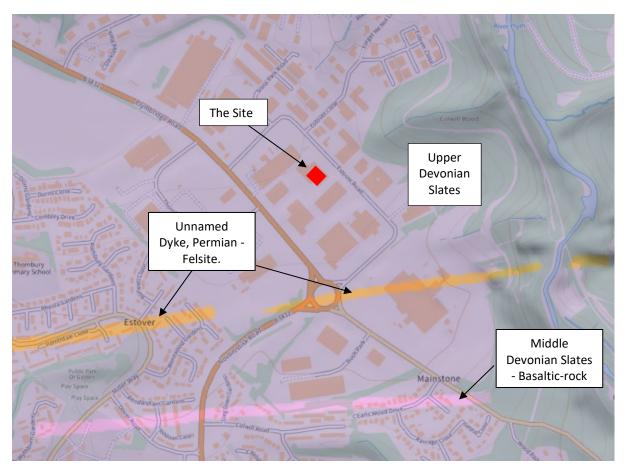

### 3 CONDITION OF THE LAND AT PERMIT APPLICATION

### 3.1 Geology

- 3.1.1 The underlying geology at the site comprises the Upper Devonian Slates, a metamorphic bedrock formed between 382.7 and 358.9 million years ago during the Devonian period. This stratum is characterised as slate with subsidiary Hornfelsed slate and trace mudstone.
- 3.1.2 There are no superficial deposits underlying the site

Figure 1 – Bedrock Geology (Extract from BGS Geology Viewer<sup>1</sup>)

### 3.2 Hydrogeology

- 3.2.1 The site is located on a Secondary A Bedrock aquifer, defined by the Environment Agency as aquifers which "comprise permeable layers that can support local water supplies, and may form an important source of base flow to rivers".
- 3.2.2 The flow type through the bedrock aquifer is classified as fracture flow.

<sup>&</sup>lt;sup>1</sup> https://geologyviewer.bgs.ac.uk/

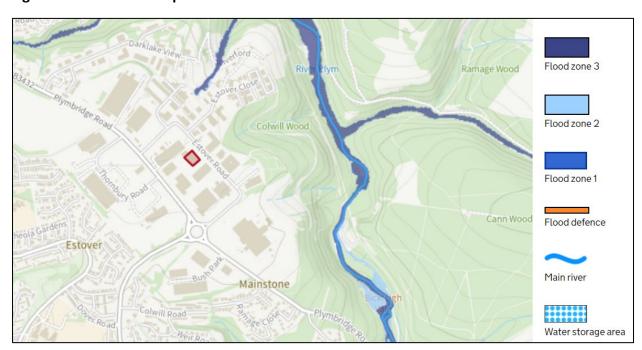

- 3.2.3 The site is not located within a Source Protection Zone but is in a high groundwater vulnerability area.
- 3.2.4 The EnviroCheck Report details there are two companies with groundwater abstractions within 500m of the site:
  - X3 Food and Drink: Process Water, Wrigley Co Ltd, 302-317m south, Licence 15/47/002/G/039 and 1547002G039
  - Environmental: Pump & Treat: Pollution Remediation, Fine Tubes Limited, 353m northwest, Licence Sw/047/0002/014

### 3.3 Hydrology

- 3.3.1 The River Plym is the closest inland river to the site, located ~620m east of the site at its closest point. There are several springs that feed the River Plym in the vicinity of the site including one in Colwill Wood some 180m east of the site and adjacent to Moorview Court approximately 260m north of the Site.
- 3.3.2 The site is located in Flood Risk Zone 1 and is at low risk of flooding from rivers or the sea.

Figure 2 – Flood Risk Map<sup>2</sup>

 $<sup>^2</sup> https://flood-map-for-planning.service.gov.uk/flood-zone-results?polygon=[[251587,59849],[251622,59806],[251589,59779],[251551,59816],[251587,59849]] \& center=[251586,59814] \& location=pl6%25207 py$ 

#### 3.4 Historical Land Use

- 3.4.1 A review of the Historical mapping which dates back to 1870, shows the site to be situated in a rural setting on agricultural land. 1973-1980, the surrounding area starts to be developed with an engineering training centre (90m east) and engineering works (130m south)
- 3.4.2 Available mapping shows the site first being constructed/built upon in 1982 (buildings are not present on the map published in 1981). The footprint of the building (light industrial/warehousing) in which the Site is situated increases in 2006, along with further development of the industrial estate.

#### 3.5 Current Land Use

3.5.1 The site is located on the Phoenix Mills Business Park, part of the Estover Industrial Estate and is surrounded by commercial and industrial activity. Current industrial sites include a ball bearing manufacturer 100m west, a metal pipework/tubing manufacturer 25m southeast, vehicle repairs 150m north and an insulation manufacturer 140m southeast.

#### 3.6 Waste Operations

- 3.6.1 There are no recent or historical landfills located within a 500m radius of the site.
- 3.6.2 An asbestos waste transfer station is located 366m northeast of the site, operated by Gwella Contracting Services Ltd.

#### 3.7 Pollution Prevention Measures

- 3.7.1 The site is located within an industrial building. Waste processing is entirely undertaken within the sealed building, which is kept at negative pressure with chemically-scrubbed air extraction, impermeable surfacing, spill kits and daily site inspections.
- 3.7.2 All activities will be undertaken within the enclosed unit, preventing any fugitive escape of dust/particulates. There is an impermeable chemically treated floor to prevent any corrosion/impacts from spillages. A chemical spill kit is available on site.
- 3.7.3 Waste arriving to the site will be in solid, granular powder form. The materials will be appropriately packaged to prevent leaks of materials and will only be opened when ready for processing within the indoor facility which benefits from impermeable surfacing. Therefore, the risk of materials becoming windswept or fugitive emissions of dust beyond the site boundary are very low.

- 3.7.4 All waste treatment is undertaken within industry standard sealed vessels, which connect to combined point source emissions to air with appropriate abatement.
- 3.7.5 All staff working at the site have been provided with training appropriate to their role and have a responsibility for their part in health and safety and environmental awareness and pollution control.
- 3.7.6 Altilium will also accept and export hazardous chemicals, reagents and products. Loading and unloading of materials will be organised to ensure availability of trained personnel for forklift usage and minimising simultaneous operations where practicable. Details for the safe handling and movement of chemicals and waste are detailed within the Site's Operating Techniques. The site will also benefit from a Traffic Management Plan.

### 3.8 Pollution Incidents

- 3.8.1 The Envirocheck report details one recorded pollution incident within 1km of the site, classed as a Category 2 Significant Impact to water from solvent based organic chemicals. This incident occurred in 2004 and was 622m northwest of the site.
- 3.8.2 There are no recorded incidents at the site itself.

#### 3.9 Historical Contamination

- 3.9.1 No evidence of historical contamination can be seen from prior historical mapping, or Envirocheck reporting on this site.
- 3.9.2 Luke Prazsky (Regional Director) undertook a site walkover on 1 February 2024). No visual/olfactory evidence of existing contamination is recorded prior to the issue of the Environmental Permit.

### 3.10 Baseline Data

- 3.10.1 Baseline estimated background data is available for the site, take from the Landmark Envirocheck report. The estimated values provide the likely background concentration of the potentially harmful elements and is sourced from the British Geological Survey:
  - Arsenic 25-35mg/kg;
  - Lead 100-200mg/kg;
  - Cadmium <1.8mg/kg;</li>
  - Chromium 90-120mg/kg;
  - Nickel 30 45mg/kg.

- 3.10.2 There is no measured urban soil chemistry data available for the site. Environmental monitoring is not currently undertaken at the site for soil or water.
- 3.10.1 Given that all activities are fully contained inside the building and the small scale of the operation, site investigation is not considered necessary. Intrusive site investigation works within the footprint of the building where all waste operations and chemical processes are undertaken would damage the containment measures and create a potential pollution pathway under the building.

#### 4 STATEMENT OF SITE CONDITION

- 4.1.1 There is no evidence of any pollution impacts at the site prior to acquiring an environmental permit. The site is on an industrial estate surrounded by potentially contaminative land uses however there are no records of historical contamination or pollution incidents reported in the site boundary.
- 4.1.2 The site is located on an impermeable concrete surface and all activities are undertaken in a contained industrial unit meaning the is no direct pathway from the site to the underlying ground. It is therefore anticipated that the activities proposed will have no impact on the underlying bedrock geology or aquifer. With regards to fugitive emissions prosed operations will be contained in an enclosed building with appropriate extraction and abatement systems.

#### Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.

For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
