

DDESWL 1 - Changes to Environmental permit DDE (SW) Limited - Smithaleigh, Plympton, Plymouth, Devon, PL7 5AX - EAWML 102530

Existing Permit

In response to question 2b on the Part C2 form varying a bespoke permit this high-level document was created.

The current environmental permit reference EAWML 102530 currently operated under Standard Rules R2010 No12: Treatment of waste to produce soil <75,000 tpy. The permit variation wishes to add additional waste types, tonnages, and treatment methods to those currently permitted, however still maintain the existing EWC codes, treatment and storage techniques where appropriate.

The changes are highlighted in the sections below with reference to the supporting document where the information can be found.

A Non-Technical summary can also be found reference DDE(SW)L 2 In response to Part C2 5c.

R and D codes

Existing R and D codes to remain the same in line with current permit with addition of R3 - Recycling/reclamation of organic substances which are not used as solvents to cover the recycling of road sweepings wood.

Area

The permitted area will stay the same

Waste types and tonnages

The waste types currently permitted under the current permit are to remain, with the addition of those added in document reference DDE (SW) LIMITED 8 in addition the annual tonnage to be treated will increase to 104,000 tpa as per document DDE (SW) LIMITED 8.

Treatment techniques

The treatment techniques currently permitted will remain with the addition of 'washing' to cover the wash plant and 'de-watering' to cover road sweepers again referenced in DDE (SW) LIMITED 8.
