

Pre-application Report

To: Steve Raasch (on behalf of Mr John Smith)

Pre-application number: EPR/XP3330VH/P001

Swarbrick Hall Poultry Unit
Singleton Road
Weeton
Preston
Lancashire
PR4 3JJ

Date Completed – 01/06/2026

Thank you for seeking advice before submitting an application for an Environmental Permit.

We have completed an initial ammonia screening assessment for your proposal to identify if you will need to submit a detailed modelling assessment with your application.

The screening assessment is based on your proposal to increase the permitted number of animal places at Swarbrick Hall Poultry Unit to 450,000 broiler places.

Summary of the assessment:

The ammonia screening results carried out by the Environment Agency are only intended to apply to any EPR permit application and not for use in local council planning submissions.

Based on the information you have provided you will need to submit detailed modelling with your application. Further information about the screening results is provided in detail in Annex 1.

It will generally be necessary to employ experienced consultants to undertake this work. For more information about consultants you could contact your industry body representative or refer to the ENDS Directory: <http://www.endsdirectory.com/>

A useful guide to choosing and using an environmental consultant can be found on the government's online resource for businesses 'Business Link':
<http://webarchive.nationalarchives.gov.uk/20120823131012/http://www.businesslink.gov.uk/bdotg/action/detail?itemId=1079422318&type=RESOURCES>

When completed, please include the detailed modelling report and supporting modelling files with your H1 Environmental Risk Assessment and submit these with your completed application form to the address given below.

For an example H1 Environmental Risk Assessment refer to the example Intensive Farming EPR application available on the national archives for Environment Agency Website:

<http://webarchive.nationalarchives.gov.uk/20140328084622/http://www.environment-agency.gov.uk/business/sectors/40057.aspx>

The Nature Conservation, Landscape and Heritage Factsheet screening lists all the sites that we currently consider when screening. The table details the supporting legislation and policies and the lead organisations for the protected area / species. Please note not all the sites listed are relevant to the Intensive Farming sector.

It is available on the Environment Agency website:

<http://webarchive.nationalarchives.gov.uk/20140328084622/http://cdn.environment-agency.gov.uk/geho0612burd-e-e.pdf>

Applying for your permit

You will need to complete application form part C3.5:

<https://www.gov.uk/government/publications/application-to-vary-an-environmental-permit-part-c35>

Your application should be emailed to:

PSC@environment-agency.gov.uk

or sent to:

Environment Agency Permitting and Support Centre
Environmental Permitting Team
Quadrant 2
99 Parkway Avenue
Parkway Business Park
Sheffield
S9 4WF

If you need further information about this screening assessment or applying for your permit please email us at the following address:

preapplicationservice@environment-agency.gov.uk

Pre-application nature conservation data are correct at the time of screening. We will consider all nature conservation sites using best available information at the time of permitting. Our GIS data are updated regularly, and we are occasionally made aware of additional nature conservation sites by other organisations which we will consider when determining a permit.

The Environment Agency takes care to ensure that the conclusions of the screening assessment are correct at the time of preparation but reserves the right to change the basis of the assessment in the light of technical developments or changes in Environment Agency procedures.

Annex 1 Ammonia Screening Results

Screening Input

Grid Reference used for the assessment: 339212,436041 (with 240m buffer)

Animal numbers and types

Animal numbers and types, housing systems, manure and slurry storage assessed are listed below. The animal numbers and emission factors are based on an interpretation of the information provided by the applicant during the pre-application process and have been used in this initial risk assessment to identify if modelling is necessary.

It is strongly recommended that the numbers of animal places by category, ventilation type and housing system is reviewed, and appropriate emission factors are assigned before undertaking the detailed modelling assessment.

Category of livestock	Housing system	Number of animal places	Ammonia emission factor (kg NH3/animal place/year)
Broilers	Fan ventilated fully littered floor, non-leaking drinkers Roof ventilation only (vents greater than 5.5 metres high, fan efflux velocity at or greater than 11 m/s)*	450,000	0.024

* this can include gable end fans that are used for heat extraction only during the summer months

Manure & Slurry Storage - none

If you decided to alter your proposal by increasing the number of animal places or by changing the animal housing type or by increasing the manure or slurry storage you should include these changes in your modelling report.

Screening Overview

This screening assessment has considered any Special Areas of Conservation (SACs), Special Protection Areas (SPAs) and Ramsar sites within 5km, any Sites of Special Scientific Interest (SSSIs) within 5km and also any National Nature Reserves (NNRs), Local Nature Reserves (LNRs), ancient woodlands and Local Wildlife Sites (LWSs) within 2km of the farm.

We have used the Environment Agency's Ammonia Screening Tool (AST v4.6) to assess the impact of your proposal at those sites identified within the above distance criteria.

We have applied a two-stage screening criteria to the ammonia screening tool results:

For SACs, SPAs, Ramsar sites and SSSIs, the screening assessment has taken into account other intensive farms that could act in-combination with the proposal, where applicable.

Where the ammonia screening tool predicts that emissions of ammonia or ammonia deposition (nutrient nitrogen or acid) will be <Y% (see Table 1 below) of the relevant critical level (CL_e) (ammonia) or critical load (CL_o) (nutrient nitrogen or acid), the proposal screens out of the requirement for an ammonia assessment.

Further modelling is required where:

- emissions of ammonia or ammonia deposition (nutrient nitrogen or acid) are in excess of Z% of the relevant CL_e or CL_o at any SSSIs and/or other nature conservation sites (e.g. NNRs, LNRs, LWSs, ancient woodlands)
- emissions of ammonia or ammonia deposition (nutrient nitrogen or acid) are in excess of Y% of the relevant CL_e or CL_o for any SACs, SPAs or Ramsar sites
- there is the potential for an in-combination effect with existing farms at any SSSIs if emissions are > Y% of the CL_e or CL_o
- the proposal is within 250m of any nature conservation sites

Table 1 Screening thresholds

Designation	Y%	Z%
SAC, SPA, Ramsar	4	n/a
SSSI	20	50
NNR, LNR, LWS, ancient woodland	100	100

Screening Results

The SPA and Ramsar sites listed in the tables below require detailed modelling as the emissions of ammonia or ammonia deposition (nutrient nitrogen or acid) is/are predicted to be > Y% of the relevant CL_e or CL_o. Detailed modelling is therefore required to assess the impact of airborne ammonia at the following sites:

Table 1 Assessment of ammonia emissions

Site Name	Designation / Status	Ammonia Critical Level (µg/m ³)	Process contribution (PC) (µg/m ³)	PC as % Critical Level
Morecambe Bay and Duddon Estuary	SPA	1	0.044	4.4
Morecambe Bay	Ramsar	1	0.044	4.4

Table 2 Assessment of nutrient nitrogen deposition

Site Name	Designation / Status	Nutrient Nitrogen Critical Load (kg N/ha/yr)	Process contribution (PC) (kg N/ha/yr)	PC as % Critical Load
Morecambe Bay and Duddon Estuary	SPA	5	0.231	4.6
Morecambe Bay	Ramsar	5	0.231	4.6

In addition to the above we have identified that there are existing permitted farms that could act in-combination with your proposal.

How we decided the sensitivity of the nature conservation site

Relevant critical loads were obtained from the [Air Pollution Information System](#).

Relevant critical levels were assigned using the best information available at the time from our internal mapping and data application.

Permitting Outcomes

For SACs, SPAs and/or Ramsar sites a permit may be issued where either:

- the ammonia screening tool indicates that the process contribution is <4% of the CLe and/or CLo

or

- detailed modelling indicates that the installation process contribution is < 1 % of the relevant CLe/CLo or, where relevant, the incremental increase from relevant background is < 1 % of the relevant CLe/CLo

or

- detailed modelling indicates the process contribution plus contributions from other relevant sources plus background is **below** the relevant CLe or CLo AND additional checks* during determination are acceptable

Please note (for SACs, SPAs and Ramsar sites only, where detailed ammonia modelling is required):

Following receipt of an application, determination may require an additional, more detailed assessment of the installation's impact on any SACs, SPAs and/or Ramsar sites including, if appropriate, consideration of impacts of other local plans, projects, and non-permitted farms which could act in-combination. It may also include consideration of the condition of the SACs, SPAs and/or Ramsar sites and the background concentrations at the sites for ammonia, nitrogen deposition and acid deposition. This potential additional assessment is required to take into consideration recent case law.

We will contact the Applicant during determination of an application if we require any additional information to assess whether to grant/issue or refuse the permit/variation.

Proposing ammonia emission reduction techniques

Where your modelling indicates the predicted process contribution is greater than the allowable thresholds, your assessment and application should include ammonia reduction techniques* to reduce the contribution to the allowable thresholds.

Where these criteria can not be met a detailed assessment of the proposal will be carried out by the Environment Agency.

For SACs, SPAs, Ramsar sites and SSSIs, we will need to consult with Natural England before the determination of the application can be completed.

Factsheets and guidance about ammonia emissions to the atmosphere and nature conservation, the Environment Agency's assessment process and how to model ammonia emissions from intensive farms can be found on our website at:
<http://webarchive.nationalarchives.gov.uk/20140328084622/http://www.environment-agency.gov.uk/business/sectors/40071.aspx>

*Please note: for SACs, SPAs and Ramsar sites where additional checks are required during determination, further reduction of ammonia emissions may be required.
