CALIBRATION METHOD

Method described in instruction IN-02 "Calibration of the sound level meter", issue number 11 date 27.01.2016, written on the basis of international standard EN IEC 61672-3:2013 Electroacoustics. Part 3: Periodic tests.

CALIBRATION RESULTS

The sound level meter submitted for testing has successfully completed the Class 1 periodic tests of IEC 61672-3:2013 (BS EN 61672-3:2013), for the environmental conditions under which the tests were performed.

The results are presented on pages 3 to 6 of this certificate (including measurement uncertainty).

CONFORMITY WITH REQUIREMENTS

On the basis of the calibration results, it has been found that, the sound level meter meets metrological requirements specified in the standard IEC 61672-1:2013 Electroacoustics – Sound level meters. Part 1: Specifications, for class 1.

UNCERTAINTY OF MEASUREMENTS

Uncertainty of measurement has been evaluated in compliance with EA-4/02:2013. The expanded uncertainty assigned corresponds to a coverage probability of 95 % and the coverage factor $k = 2$.

NOTES

1. *The information appearing on this certificate has been compiled specifically for this instrument. This calibration certificate is produced with traceable and advanced equipment which permit comprehensive quality assurance verification of all data supplied herein.*
2. *The measurements in this document are traceable to GUM (Central Office of Measures), Poland*
3. *This calibration certificate shall not be reproduced except in full, without written permission from AcSoft Ltd.*

Thermo-Barometer	LAB-EL	LB-706B	912	27.08.2021
Acoustical Calibrator	Svantek	SV30A	83782	17.09.2021
Reference Microphone	GRAS	40AG	235709	31.08.2021
Sound Intensity Calibrator	GRAS	51AB	203319	01.09.2021

CALIBRATION RESULTS Calibration results are as follows:

1. Indication at the calibration check frequency

The sound level meter was calibrated in compliance with the instruction manual. During this process, the indication of this SLM was adjusted to the sound pressure level of the sound level calibrator type SV 30A, No 83782, from SVANTEK. The sound pressure level was corrected by the free-field factor.

Deviation of the acoustic pressure measurement of the A-weighted sound level using the sound calibrator type SV 30A, No 83782, from SVANTEK, was made according to the standard reference conditions: for static pressure 1003 hPa, for temperature 24 °C and for relative humidity 60 %, results:

0.0 ± 0.2 dB

The deviation was determined as a difference between the measured sound level and the sound level corrected by the free-field factor appropriate to mentioned sound calibrator.

2. Self-generated noise with microphone installed

Frequency weighting	A
The highest level of self-generated noise stated in the instruction manual [dB]	n/a
Indication [dB]	n/a

3. Self-generated noise with microphone replaced by the electrical input signal device

Frequency weighting	A	C	Z
The highest expected level of self-generated noise stated in the instruction manual [dB]	15.0	15.0	23.0
Level of self-generated noise [dB]	14.1	14.1	19.5

4. Acoustical signal tests of a frequency weighting C

Frequency	Relative frequency-weighted free-field response	Design-goal frequency weighting	The deviation of frequency weighting	Expanded uncertainty	Acceptable limits
Hz	dB	dB	dB	dB	dB
125.0	93.9	-0.2	0.1	0.3	±1.5
1000.0	94.0	0.0	0.0	0.3	±1.1
4000.0	93.5	-0.8	0.3	0.4	±1.6
8000.0	91.1	-3.0	0.1	0.4	-3.1; +2.5

5. Electrical signal tests of frequency weightings

Frequency	Design-goal frequency weighting			The deviation of frequency weighting			Expanded uncertainty	Acceptable limits
	A	C	Z	A	C	Z		
Hz	dB	dB	dB	dB	dB	dB	dB	dB
63	-26,2	-0,8	0,0	0.1	0.0	0.0	0,3	±1,5
125	-16,1	-0,2	0,0	0.0	0.0	0.0	0,3	±1,5
250	-8,6	0,0	0,0	0.0	0.0	0.0	0,3	±1,4
500	-3,2	0,0	0,0	0.0	0.0	0.0	0,3	±1,4
1000	0,0	0,0	0,0	0.0	0.0	0.0	0,3	±1,1
2000	1,2	-0,2	0,0	0.0	0.0	0.0	0,3	±1,6
4000	1,0	-0,8	0,0	0.0	0.0	0.0	0,3	±1,6
8000	-1,1	-3,0	0,0	0.1	0.1	0.0	0,4	-3,1; +2,1
16000	-6,6	-8,5	0,0	-0.2	-0.2	0.0	0,6	-17,0; +3,5

6. Frequency and time weightings at 1 kHz

	Sound level				Time-averaged sound level
Frequency weighting	A	A	C	Z	A
Time weighting	Fast	Slow	Fast	Fast	-
Indication [dB]	114.0	114.0	114.0	114.0	114.0
The deviation of indication from the indication of A-weighted sound level with Fast time weighting [dB]		0.0	0.0	0.0	0.0
Expanded uncertainty [dB]		0.1			
Acceptable limits[dB]		±0.3	±0.4	±0.4	±0.3

7. Level linearity

Reference level range: HIGH

Expected sound level	Indication	Level linearity error	Expanded uncertainty	Acceptable limits

CONFORMITY & TEST DECLARATION

1. Herewith Svantek company declares that this instrument has been calibrated and tested in compliance with the internal ISO9001 procedures and meets all specification given in the Manual(s) or respectively surpass them.

2. The acoustic calibration was performed using the Sound Calibrator and is traceable to the GUM (Central Office of Measures) reference standard - sound level calibrator type 4231 No 2292773.

3. The information appearing on this sheet has been compiled specifically for this instrument. This form is produced with advanced equipment & procedures which permit comprehensive quality assurance verification of all data supplied herein.

4. This calibration sheet shall not be reproduced except in full, without written permission of the SVANTEK Ltd.

QUOTATION - Stage 1

Subject:	*Your reference:*	*Our reference:*	*Date:*
Thurrock Flexible Generation Plant - 59 pcs vent. set	Ventilation System 64.2000	103079, rev. B	March 12, 2024

Dear Ms. Atkins,

We refer to your request to quote for ventilation systems, based on a very high level of ventilation flow: air inlet= 124,560 m³/ h and air outlet= 105,260 m³/ h.

Although we feel that this amount of air flow is way too much, we offer this so that you can compare it.

In a later stage, you can decide what the final air flow must be.
Of course, we are open and willing to advise you on that part (if necessary).

Pos. A : Starting points
Pos. B : 59 pcs air inlet
Pos. C : 59 pcs air outlet
Pos. D : 59 pcs front wall at the air inlet side
Pos. E : Doors for the engine rooms
Pos. F : Budget pricing

Pos. A: starting points
- Engine : Jenbacher, JMS 624.
- Installation : Inside a concrete enclosure, which is provided by others.
- Absorption : There is no absorption inside the engine rooms.
- Dimensions enclosure : L x W x H = approx. 16,500 x 4,850 x 4,000 mm.
- Air inlet flow : approx. 124,560 m³/h; including combustion air.
- Air outlet flow : approx. 105,260 m³/h.
- Air inlet : Installed horizontally at one end of the engine room.
- Air outlet : Installed vertically, with horizontal outlet, on the roof of each engine room.
- Filters : Included.
- Fans : Installed in the air inlet.
- Max. over pressure : 150 Pa.

PDF-XChange Editor
Click to BUY NOW!
www.tracker-software.com

- Acoustic requirements : Air inlet : Lw= 86 dB(A)/ each.
  : Air outlet: Lw= 89 dB(A)/ each.
  Measured under free field conditions.

All acoustical calculations are based upon following sound spectrum (Lp/ Lw) of the genset (other sounds from piping and flue gas ducts are excluded).

	31	63	125	250	500	1k	2k	4k	8k	Hz
Genset Lp@ 1m	90	97	103	101	96	95	94	96	97	dB
Genset Lw	113	120	126	124	119	118	117	119	120	dB

Noise Levels Gensets:
Unsilenced noise levels for the genset according to Jenbacher Technical Description Cogeneration Unit JMS 624, ytd. 2022 Engine tolerance is +/- 3 dB.
We have not calculated with these tolerances.

General:
- Design based on the technical specifications (SEL-THU-D-ME-SPC-0002 Technical Specification) and the starting points as described above.
- Design changes may be implemented during detailed design based upon value engineering.
- The accuracy of the given noise data determines the quality of the noise calculations. The calculations have been made with the given average noise levels.
- All plant sound pressure levels are in free field conditions with one engine running and excluding any influence from structure born noise and/or other noise sources.
- When measurements are taken on several points the average level will be determined. Measurements taken outside the airflow to avoid influence of airflow on measured values.
- All plant sound pressure level limits are at full load operating conditions.
- All plant sound pressure level limits are at the mitigated level with noise control installed.
- Any noise measures or calculations in addition to the ventilation systems are excluded.

Pos. B: description air inlet
Removable air inlet section, completely supplied as one unit, to be lifted into position with a crane. In the clear opening a steelwork framing will be provided (= pos. D).

Overall outside dimensions approx. W x H x L = 3,700 x 3,650 x 2,850 mm (excl. fans).
The side walls/ roof of the unit are built-up as soundproof panels to avoid noise break-out, made in pre-galvanised steel sheet. Infill of semi-rigid fibre slabs offering excellent strength and resistance to erosion. Material is inert, non-hygroscopic, vermin proof, does not support bacteriological growth and has a Class 1 rating for surface spread of flame acc. to BS 476 [Part 7, 1971].

Air inlet unit

PDF-XChange Editor
Click to BUY NOW!
www.tracker-software.com

The air inlet unit consists of following components:

Weather louvers

Front face entry external weather louvres as a protection against the direct ingress of rain, leaves and birds into the air inlet opening. Over a single face the air speed would be approx. 3.0 m/s.

Filters

25 pcs pocket filters with filter class ISO Coarse 60% (acc. ISO 16890) (former class G4). Low initial differential pressure and high dust holding capacity. Quick installation and filter changing times due to easy, safe handling. Filter elements are installed in a standard cell frame with four clamping elements for secure sealing between the frame and the filter element. Advised pressure difference to exchange filter units is 150 – 180 Pa.
Door at the side of the air inlet section to exchange the pocket filters.

Attenuator

Attenuator part with splitter type silencers made from pre-galvanised sheet steel.

Volume dampers

5 pcs air volume dampers, each with 1 actuator, 24V or 230V, spring open, electrically closed, accessible from within the genset compartment. Damper operation controlled by generator control unit. Each of the damper is wired out to one central junction box. Wiring to control the unit to be provided by others.

Fans

5 pcs fans, suitable for frequency control [electrical control unit by third party]. Fans are axial fans, diameter 900 mm, with 7.5 kW motor (NON ATEX).
The fans will each have an emergency start/ stop button, wired to a common junction box.

front side of air inlet (without louvers)

back side of air inlet

Pos. C: description air outlet
Fixed mounted vertical air discharge section, with horizontal outlet, on top of the concrete roof of the engine room.

Acoustic air outlet unit with overall outside dimensions approx. W x H x L = 3,200 x 3,200 x 4,000 mm.

The opening in the roof of the concrete enclosure has to be provided with a concrete upstand to install the rain collar including the silencer on.

"horizontal" outlet

"horizontal" outlet

The air outlet consists of following components:

Damper plenum
Dimensions plenum: W x H x L = 3,200 x 3,200 x 355 mm.
Dampers accessible from inside the genset compartment.
Dimensions dampers: 2 pcs W x L = 2,000 x 1,335 mm. Including Belimo actuator, spring open, electrically closed. Accessible from within the genset compartment. Damper operation controlled by generator control unit [wiring to control unit by others].

Bottom flange / rain collar:
The silencer is provided with a reinforced bottom flange/ rain collar. It is installed on top of the concrete upstand. There is no need for a second/ separate rain collar.
Rain collar: See photo.

bottom flange/ rain collar

Silencer

A rectangular absorption silencer is installed vertically on the roof curb.
W x H x L = 3,200 x 3,200 x 1,400 mm.

Horizontal outlet

The horizontal outlet unit is installed on top of the vertically positioned attenuator, including bird screen.

Pos. D: description front wall at the air inlet side

At the air intake side of the enclosure, a steel frame including an acoustic top- and side panel will be installed. The acoustic isolation will be equivalent to the isolation values of the air inlet to achieve the same noise requirements.
The dimensions of the complete frame set is approx. W x H = 4,800 x 3,900 mm (exact dimensions to be determined) incorporating a single door plus closure panels. The door is quoted separately (= Pos. E).

Front wall

Materials:

-	Ducts	: Pre-galvanised sheet steel, no painting.
-	Attenuators	: Pre-galvanised sheet steel, no painting.
-	Weather louvers	: Pre-galvanised sheet steel, in RAL colour, with bird protection.
-	Multi-leaf dampers	: Pre-galvanised sheet steel, with Belimo actuator.
-	Steel profiles	: Galvanized.
-	Purchased parts	: In manufacturer standard.

Conservation/ Painting/ Colour:

Weather louvers and exterior ventilation parts are coated in C4.
Colour: any RAL colour of your choice (except metallic and/ or signal colours)
A maintenance manual will be delivered.

- Weather louvers are powder coated.
- Other ventilation parts are wet painted.
- Wall panels: wet coated.
- Other components: unpainted
- Purchased items: in manufacturer standard.

Pos. E1: doors (not fire rated)

Engine rooms:
Per engine room 2 single personnel doors and 1 double equipment door are included; type AL-D/D45.

Noise reduction Rw = 45 dB.

The single doors and the active door leaf of the double door are provided with an anti-panic bar on the inside and a door handle on the outside.
The passive door leaf of the double door is provided with an espagnolette lock on the inside.

single door

double door

Door provided with:
- Double sealing with special rubber design.
- Complete with door frame from 2 mm thick steel.
- Lever latch on the outside and emergency lever on the inside.

Dimensions (clear wall opening[1]):
- Engine room intake end : 59 pcs single door : W x H = 1,044 x 2,421 mm.
- Engine room discharge end : 59 pcs single door : W x H = 1,044 x 2,421 mm.
- Engine room discharge end : 59 pcs double door : W x H = 1,444 x 2,421 mm.

[1]) As per our manual 'Building tolerances for wall openings' rev.1.1. Available on request.

Pos. E2: doors (fire rated EI2, 60 minutes)
Per engine room 2 single personnel doors and 1 double equipment door are included; type AL-D/D50.

Noise reduction Rw = 50 dB.

All door leaves are rated EI2, 60 minutes.
Because of that, all door leaves are provided with a door closer.

The single doors and the active door leaf of the double door are provided with an anti-panic bar on the inside and a door handle on the outside.

Pos. B : Description air inlet

Removable air inlet section, completely supplied as one unit, to be lifted into position with a crane. In the clear opening a steelwork framing will be provided (= pos. D).

Overall outside dimensions approx. W x H x L = 3,300 x 3,450 x 2,750 mm (excl. fans).
The side walls/ roof of the unit are built-up as soundproof panels to avoid noise break-out, made in pre-galvanised steel sheet. Infill of semi-rigid fibre slabs offering excellent strength and resistance to erosion. Material is inert, non-hygroscopic, vermin proof, does not support bacteriological growth and has a Class 1 rating for surface spread of flame acc. to BS 476 [Part 7, 1971].

The air inlet unit consists of following components:

<u>Weather louvers</u>
Front face entry external weather louvres as a protection against the direct ingress of rain, leaves and birds into the air inlet opening. Over a single face the air speed would be approx. 3.0 m/s.

<u>Filters</u>
25 pocket filters with filter class G4 (acc. ISO 16890 ISO Coarse 60%). Low initial differential pressure and high dust holding capacity. Quick installation and filter changing times due to easy, safe handling. Filter elements are installed in a standard cell frame with four clamping elements for secure sealing between the frame and the filter element.
Advised pressure difference to exchange filter units is 150 – 180 Pa.
Door at the side of the air inlet section to exchange the pocket filters.

<u>Attenuator</u>
Attenuator part with splitter type silencers made in pre-galvanised sheet steel.

<u>Volume dampers</u>
4 air volume dampers, each with 1 actuator, spring open, electrically closed, accessible from within the genset compartment. Damper operation controlled by generator control unit. Each of the damper is wired out to one central junction box. Wiring to control the unit to be provided by others.

<u>Fans</u>
4 fans, suitable for frequency control [electrical control unit by third party], Fans are axial fans, diameter 900 mm, with 7.5 kW motor (NON ATEX).
The 4 fans will each have an emergency start/stop button, wired to a common junction box.

Pos. C : Description air outlet

Fixed mounted vertical air discharge section, with horizontal blow out, on top of the concrete roof of the engine room.

Acoustic air outlet unit with overall outside dimensions approx. W x H x L = 2,800 x 2,400 x 3,000 mm.

The opening in the roof of the concrete enclosure has to be provided with a concrete upstand to install the rain collar including the silencer on.

The air outlet consists of following components:

<u>Damper plenum</u>

Dimensions plenum: W x H x L = 2,400 x 2,800 x 355 mm.
Dampers accessible from inside the genset compartment.
Dimensions dampers: W x L = 2,000 x 1,995 mm. Including Belimo actuator, spring open, electrically closed. Accessible from within the genset compartment. Damper operation controlled by generator control unit [wiring to control unit by others].

<u>Bottom flange / Rain collar</u>

Dimensions outlet channel W x H = 2,800 x 2,400 mm
Rain collar: See photo* on right-hand side.
To be mounted on top of the concrete upstand

*this photo shows a so called 'penthouse' outlet

<u>Silencer</u>

Vertically mounted rectangular absorption silencer.
W x H x L = 2,800 x 2,400 x 1,400 mm.

<u>Horizontal blowout</u>

The horizontal blow out unit is assembled on top of the vertically positioned attenuator

<u>Louver</u>

Horizontal outlet is provided with a rain repellent louver as a protection against the direct ingress of rain, leaves and birds into the air outlet.

Pos. D : Description front wall at the air inlet side
At the air intake side of the enclosure, a steel frame including an acoustic top- & side panel will be installed. The acoustic isolation will be equivalent to the isolation values of the air inlet to achieve the same noise requirements.
The dimensions of the complete frame set is approx. W x H = 4,800 x 3,900 mm incorporating single door plus closure panels. The door is quoted separately (= Pos. E).

Materials:
- Ducts : Pre-galvanised sheet steel, no painting.
- Attenuators : Pre-galvanised sheet steel, no painting.
- Weather louvers : Pre-galvanised sheet steel, in RAL colour, with bird protection.
- Multi-leaf dampers : Pre-galvanised sheet steel, with 24V Belimo actuator.
- Steel profiles : Galvanized.
- Purchased parts : In manufacturer standard.

Conservation/ Painting/ Colour:
- Weather louvers and exterior ventilation parts are coated in C4.
- Weather louvers are powder coated.
- Other ventilation parts are wet painted.
- Colour: RAL xxxx (tbc).
- Other components: unpainted
- Purchased items: in manufacturer standard.

Wall panels: coated.
For the painting a maintenance manual will be delivered.

Pos. E1 : Doors (not fire rated)

Engine rooms:
Per engine room 2 single personnel doors and 1 double equipment door are included.

Noise reduction Rw = >43 dB.

The single doors and the active door leaf of the double door are provided with an anti-panic bar on the inside and a door handle on the outside.
The passive door leaf of the double door is provided with an espagnolette lock on the inside.

Door provided with:
- Double sealing with special rubber design.
- Complete with door frame from 2 mm thick steel.
- Lever latch on the outside and emergency lever on the inside.

Dimensions (clear wall opening[1]):

- Engine room intake end	: 59 pcs single door	: W x H = 1,044 x 2,421 mm.
- Engine room discharge end	: 59 pcs single door	: W x H = 1,044 x 2,421 mm.
- Engine room discharge end	: 59 pcs double door	: W x H = 1,444 x 2,421 mm.

Pos. E2 : Doors (fire rated EI2, 60 minutes)

Noise reduction Rw = >48 dB.
All door leaves are rated EI2, 60 minutes.
Because of that, all door leaves are provided with a door closer.

The dimensions are the same as mentioned above in pos. E1.

[1] As per our manual 'Building tolerances for wall openings' rev.1.1. Available on request.

e) JENBACHER reserves the right to change the generator supplier and the generator type. The contractual data of the generator may thereby change slightly. The contractual produced electrical power will not change.

0.04 Technical data of heat recovery

General data - Hot water circuit

Total recoverable thermal output	kW	2.838
Return temperature	°C	52,0
Forward temperature	°C	80,0
Hot water flow rate	m³/h	97,6
Nominal pressure of hot water	PN	10
min. operating pressure	bar	3,5
max. operating pressure	bar	9,0
Pressure drop hot water circuit	bar	1,70
Maximum Variation in return temperature	°C	+0/-5
Max. rate of return temperature fluctuation	°C/min	10

The final pressure drop will be given after final order clarification and must be taken from the P&ID order documentation.

JENBACHER

connection variant H2

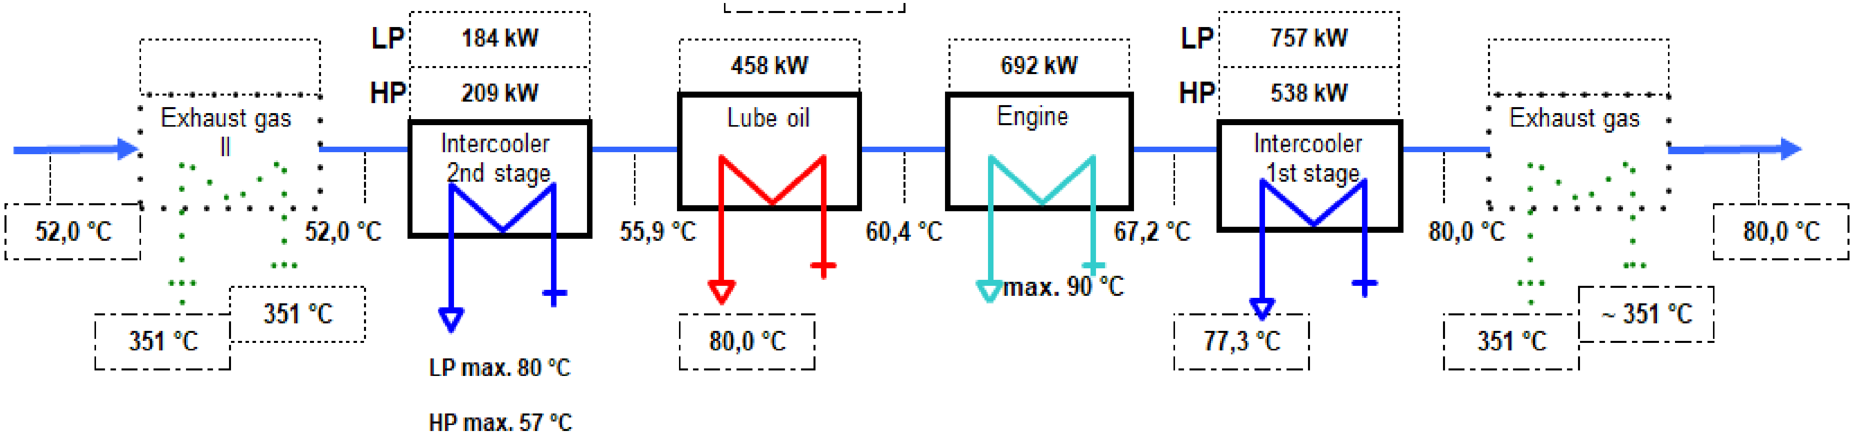
J 624 GS-K12

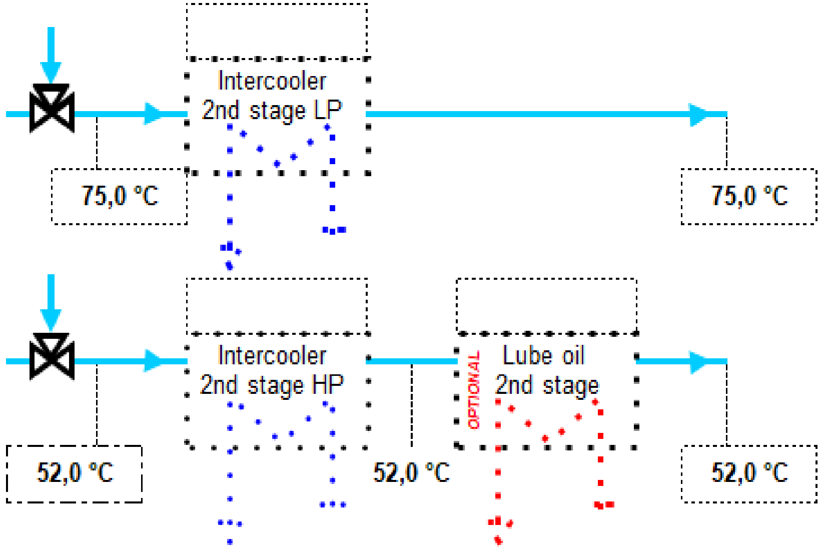
Hot water circuit (calculated with Glycol 37%)

Recoverable thermal output = 2.838 kW

(+12/-8 % tolerance)

Hot water flow rate = 97,6 m³/h





Low temperature circuit (calculated with Glycol 37%)

Heat to be dissipated = 0 kW

(+12/-8 % tolerance)

Cooling water flow rate = 50,0 m³/h

0.10 Technical parameters

All data in the technical specification are based on engine full load (unless stated otherwise) at specified temperatures and the methane number and subject to technical development and modifications.

All pressure indications are to be measured and read with pressure gauges (psi.g.).

[1] At nominal speed and standard reference conditions ICFN according to ISO 3046-1, respectively
[2] According to ISO 3046-1, respectively, with a tolerance of +**5** %.
Efficiency performance is based on a new unit (immediately upon commissioning).Effects of degradation during normal operation can be mitigated through regular service and maintenance work.

[3] Average value between oil change intervals according to maintenance schedule, without oil change amount
[4] At p. f. = 1.0 according to IEC 60034-1:2017 with relative tolerances, all direct driven pumps are included
[5] Total output with a tolerance of +12/-8 %
[6] According to above parameters [1] through [5]
[7] As a guiding value at p.f. 0.8 and only valid for (engine, generator, TCM). Other peripheral equipment is not considered.
[8] Exhaust temperature with a tolerance of ±8 %
Note: an optimised operating mode to minimise methane slip can result in changed exhaust gas data (exhaust gas temperature, NOx emissions, etc.) and must be taken into account in the design of the exhaust gas aftertreatment
[9] Mixture temperature at:
If the engine is designed for intake air temperatures of > 30°C, then the stated mixture heat of the 1st stage is to be increased from 25°C in 2%/°C increments. The additional temperature must be added to the resulting full load point.

Radio interference level
The ignition system of the gas engines complies the radio interference levels of CISPR 12 and EN 55011 class B, (30-75 MHz, 75-400 MHz, 400-1000 MHz) and (30-230 MHz, 230-1000 MHz), respectively.

Definition of output
- ISO-ICFN continuous rated power:
  Net break power that the engine manufacturer declares an engine is capable of delivering continuously, at stated speed, between the normal maintenance intervals and overhauls as required by the manufacturer. Power determined under the operating conditions of the manufacturer's test bench and adjusted to the standard reference conditions.
  - Standard reference conditions:

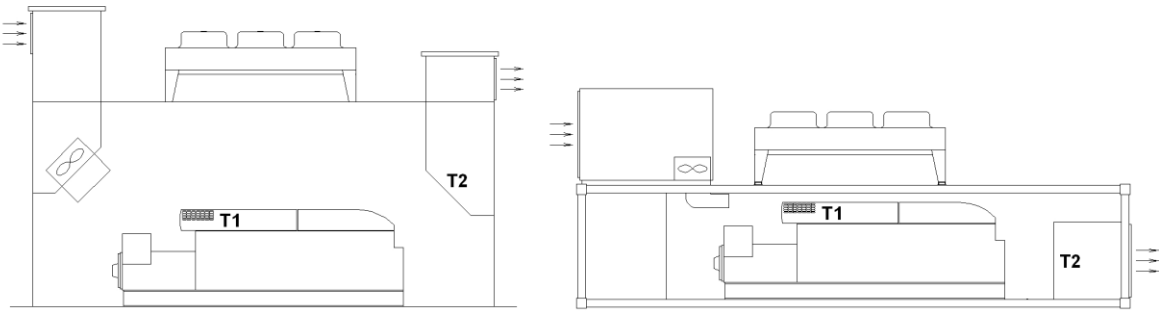
Barometric pressure:	1000 mbar (14.5 psi) or 100 m (328 ft) above sea level
Air temperature:	25°C (77°F) or 298 K
Relative humidity:	30 %

- Volume values at standard conditions (fuel gas, combustion air, exhaust gas)
  Pressure: 1013 mbar (14.7 psi)
  Temperature: 0°C (32°F) or 273 K

Loss of engine performance
a) Performance reduction due to gas quality
If the reference methane number is not reached and the knock control responds, the ignition timing at full performance is adjusted in conjunction with the engine management system; only then is performance reduced.
H2 admixtures in the range of 3–5 Vol% into the natural gas network are generally regarded as non-critical. Prerequisites for this are rates of change according to TA 1000-0300, as well as the knock resistance (minimum methane number) of the natural gas-H2 mixture according to the specification. For reliable compliance with required NOx emissions, the JENBACHER LEANOX^{plus} control is recommended (measurement of NOx emissions and correction of the LEANOX controller). Higher H2 addition rates into the natural gas network must be assessed on a project-specific basis.

b) Performance reduction due to voltage and frequency limits
If the voltage and frequency limits for generators specified in IEC 60034-1 Zone A are exceeded, performance is reduced.

c) Performance reduction due to environmental conditions
Standard rating of the engines is for an installation at an altitude ≤ 500**m** and combustion air temperature ≤ 30**°C** (T1)
Engine room outlet temperature: **50°C** (T2) -> engine stop



The minimum recommended air change ratio (C) must be observed to maintain the required air quality and prevent unwanted gas accumulations (refer to Section ⇨ Potentially explosive Atmospheres as per TA1100-0110). The calculation is based on TA 1100-0110 and is C_{min}= 50h^{-1} for JENBACHER modules.

Parameters for the operation of JENBACHER gas engines
The genset fulfils the limits for mechanical vibrations according to ISO 8528-9.
The following forms an integral part of a contract and must be strictly observed: **TA 1000-0004, TA 1100 0110, TA 1100-0111**, and **TA 1100-0112.**
Transport by rail should be avoided. See **TA 1000-0046** for further details

Failure to adhere to the requirements of the above-mentioned TA documents can lead to engine damage and may result in loss of warranty coverage.

Ready for H2 means a possible adaptation up to 100vol% H2 operation. Performance data, timeline and costs can be determined on a project-specific basis.

Parameters for the operation of control unit and the electrical equipment

Relative humidity 50% by maximum temperature of 40°C.
Altitude up to 2000m above the sea level.

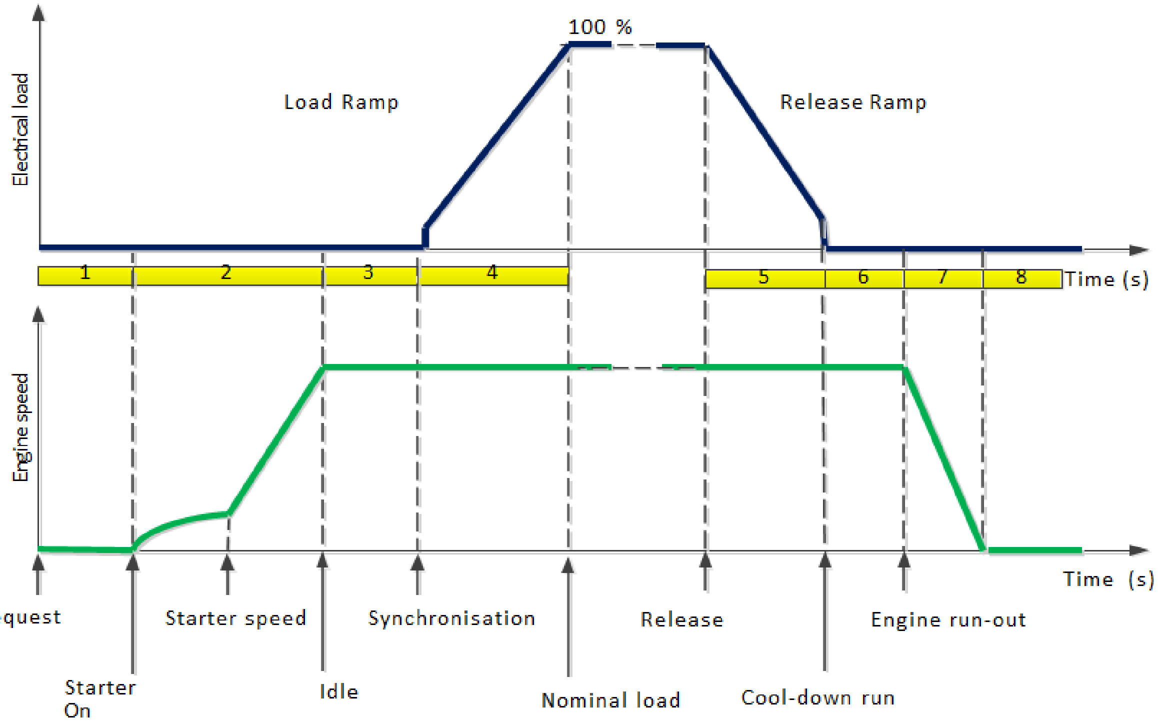
0.20 Mode of Operation

Grid Parallel Mode
The genset is running in parallel to the utility. The unit load can be adjusted via its power control set point or designated option.
Procedure in the event of mains failure:
When the mains monitor relay (protective relay ANSI No. 27, 59, 81, 78- provided either by JENBACHER or the customer) is activated due to a mains failure, the engine is isolated from the mains by opening the generator breaker. The module is shut down without any cool-down run.
Island operation is not available in this case!
The module can be restarted following the restoration of mains power after a 5-minute mains stabilization period.

0.20.01 Guide values for genset - start/stop times and el. load ramps

Basic boundary conditions for engine start:

Engine conditions	Oil temperature (°C / °F)	Cooling-water temperature (°C / °F)
Fast start release	> 27 / 80.6	> 55 / 131
Start enable automatic start		> 37 / 98.6
synchronization release		> 55 / 131



The following time data of the individual start sections up to the nominal load are **guideline values** for a fully automatic start under preheated conditions for mains parallel operation. Only the total start time is observed under the various engine conditions. The individual time periods specified in the table therefore do not necessarily add up to the specification of the total start time in mains parallel operation.

Deviations are possible for special designs.

	J208	Type 3	Type 4	Type 612 – 620	J624
(1) Start preparation [1] *)	0	0	20	70	90
(2) Engage starter until reaching nominal speed [s] *)	20	20	25	40	40
(3) Synchronisation [s] *) **)	1-50	1 – 50	1 – 50	1 – 50	1 – 50
(4) Load application up to nominal load [s] *) **)	180	180	180	160	160
Total start-up time from request to nominal load [s]	<300	<300	<300	<300	<330

*) The times for start-up preparation and synchronisation can vary greatly and depend on project specifications.
****) Fast start function and faster load ramps are available on request.**

The following **times for unloading the engine** are guide values for engine/generator combination inertia constant H<1 kWs/kVA (with LS, CGT, TDPS generators) and the hot operating condition.

(5) Load reduction ramp [s]	160	160	160	160	120
(6) Cool-down run [s]	60	60	60	10	10
(7) Run-down [s]	60	60	60	60	60
Total time from nominal load to run-down time [s]	280	280	280	220	180
(8A) gas tightness control [s]	<100	<100	<100	<100	<100
(8B) Flushing time exhaust tract after shutdown [s]***)				100	100
(8C) Flushing time exhaust tract after shutdown with SD and WT [s]***)				180	300
(8D) Flushing time exhaust tract after shutdown with SD, WT, SCR and greenhouse [s]***)				225	400
(8E) Blocking time for restart [s]	30	30	30	30	30

***) The exhaust gas purging times apply when the exhaust gas purging fan is installed

The table shows the waiting time between stopping the engine and starting it again, with the gas tightness check (8A), exhaust gas scavenging (8B-D) and blocking time (8E) being carried out in parallel. The flushing times can be extended project-specifically depending on the exhaust system.
It should also be noted that the exhaust gas purge must be performed after each unsuccessful start attempt once the gas valve has been opened. (SD = silencer, WT = heat exchanger)

0.30 General information for connection to the public mains

Technical Instruction TA 1530-0188 describes the - possibly optional - functions and parameters for complying with the boundary conditions defined in the country-specific "Grid Codes".

Network operator-dependent requirements must always be coordinated with JENBACHER.

0.30.10 Generator operating range in mains parallel operation

Frequency:
Normal operation fn +/-2% - without power output reduction
Extended operation: fn +4/-6%- with power output reduction between 2 – 10%/Hz
Frequency-measurement resolution: <= 10mHz (resolution)
Generator - voltage range: +/-10% of generator Un
Generator power factor cos phi at the generator terminals: as specified in "0.03 Generator technical data"

FRT (Fault Ride Through) – capability: at mains connection point
Profile 1: 150ms/30%Un (applies to natural gas and biogas)
Profile 2 (150ms/5%Un) and Profile 3 (250ms/5%Un) upon request.

Requirement:
- mains short-circuit power must be at least 5 x SrE or 50MVA
- FRT capability of the onsite auxiliaries

Extended project requirements and country-specific design are optionally possible after consultation and approval with JENBACHER.

0.30.20 Possible mains operator requests

To protect the generating unit in mains parallel operation, appropriate mains protection monitoring functions are necessary to disconnect the generator from the mains in case of a mains fault.

The mains operator-dependent specifications such as e.g.: voltage and frequency range, active power limitation, load ramps, reactive power limitation and control, protection concept, necessary certification or declarations, process data and interfaces are to be specified in project enquiries and must be agreed with JENBACHER before conclusion of the contract.

- Selectivity assessment, protection tests and recurring tests: on-site by the system operator
- Control power provision via pool operator: on request e.g., primary, secondary, tertiary
- Black start capability and countering in own use: on request
- Power generation system (EZA) controller or central control: on-site or possible on request
- Process data scope / remote control:
  - System data must be provided by the connectee for the mains operator.
  - Remote control interface to the mains operator: on-site
  - Interface specification!

Billing measurements - installation, operation, maintenance and remote data transmission: on-site.

Models of genset and generator: simplified models executed as effective value models for mains parallel operation optionally available.

Model formats: Powerfactory, or PSS/E (as of PP23)
Validated genset models in Powerfactory according to FGW TR3, TR4 and TR8 by a body accredited for this purpose according to DIN EN ISO/IEC 17065

Functional scope of the models in mains parallel operation:
- static voltage stability
- dynamic mains support
- Provision of reactive power
- Behaviour at active power setpoint
- Active power adjustment in the event of overfrequency and underfrequency (LFSM-O, LFSM-U)
- Protective devices and settings

0.30.20.01 Active power adjustment in the event of overfrequency and underfrequency

The following functions are available:
- LFSM-U: Limited Frequency Sensitive Mode - Underfrequency
- LFSM-O: Limited Frequency Sensitive Mode - Overfrequency
- FSM

Reduced power output at overfrequency: (LFSM-O function)
The frequency threshold is freely adjustable from fn + (200 - 500mHz) and the static from 2% to 12%.
Unless the relevant mains operator specifies otherwise for the LFSM-O mode, a threshold of fn + 200mHz and a static of 5% is set.

Power increase in the event of underfrequency (LFSM-U function) – (OPTIONAL as of XT4.5)
activated according to the mains operator's specifications
The frequency-sensitive active power feed-in has the effect that the generating plant
also moves permanently up and down on the frequency characteristic curve ("driving on the characteristic curve") in the frequency range between fn - 200mHz (unless otherwise specified by the mains) and fn - 2.5Hz with regard to its maximum possible active power feed-in.
The prerequisite for this is a corresponding power setpoint.

Reduced power output at underfrequency:
below 98% of fn, reduction by standard 10% of maximum capacity per Hz. Reduction up to maximum fn - 6%.
Lower reduction ramps of 2 - 10%/Hz on request
The FSM function is available as an option

The power generation system is capable of continuing to operate at this minimum power when the minimum power for controllable operation is reached.

1.00 Scope of supply - module

Design:
The module is built as a compact package. Engine and generator are connected through a coupling and are mounted to the base frame. To provide the best possible isolation from the transmission of vibrations the engine is mounted to the frame by means of anti-vibrational mounts. The remaining vibrations are

eliminated by mounting the module on isolating pads (e.g. Sylomer). This, in principle, allows the module to be placed directly on any floor capable of carrying the static load.

1.01 Spark ignited gas engine

Four-stroke, air/gas mixture turbocharged, aftercooled, with high performance ignition system and electronically controlled air/gas mixture system.
The engine is equipped with the most advanced

LEANOX®   LEAN-BURN COMBUSTION SYSTEM

developed by JENBACHER.

1.01.01 Engine design

Engine block
Single-piece crankcase and cylinder block made of special casting; crank case covers for engine inspection, welded steel oil pan.

Crankshaft and main bearings
Drop-forged, precision ground, surface hardened, balanced; main bearings (upper bearing shell: grooved bearing / lower bearing shell: sputter bearing) arranged between crank pins, drilled oil passages for forced-feed lubrication of connecting rods.

Vibration damper
Maintenance free viscous damper

Flywheel
With ring gear for starter motor and additionally screwed on.

Pistons
Two-part steel piston with oil passages for cooling; piston rings made of high-quality material, main combustion chamber specially designed for lean burn operation.

Connecting rods
Drop-forged, heat-treated, big end diagonally split and toothed. Big end bearings (upper bearing shell: sputter bearing / lower bearing shell: sputter bearing) and connecting rod bushing for piston pin.

Cylinder liner
Chromium alloy gray cast iron, wet, individually replaceable.

Cylinder head
Specially designed and developed for JENBACHER-lean burn engines with optimized fuel consumption and emissions; water cooled, made of special casting, individually replaceable; Valve seats, valve guides and spark plug sleeves individually replaceable; exhaust and inlet valves made of high quality material; Pre-chamber with check-valve.

Crankcase breather
Connected to combustion air intake system.

Valve train

Camshaft, with replaceable bushings, driven by crankshaft through intermediate gears, valve lubrication by splash oil through rocker arms.

Combustion air/fuel gas system
Motorized carburetor for automatic adjustment according fuel gas characteristic. Exhaust driven turbocharger, mixture manifold with bellows, water-cooled intercooler, throttle valve and distribution to cylinders.

Ignition system
Most advanced, fully electronic high-performance ignition system, external ignition control.
MORIS / SEMIC: Automatically, cylinder selective registration and control of the current needed ignition voltage.

Lubricating system
Gear-type lube oil pump to supply all moving parts with filtered lube oil, pressure control valve, pressure relief valve and full-flow filter cartridges. Cooling of the lube oil is arranged by a heat exchanger.

Engine cooling system
Electrical jacket water pump, complete with distribution pipework and manifolds.

Exhaust system
Turbocharger and exhaust manifold

Exhaust gas temperature measuring
Thermocouple for each cylinder

Electric actuator
For electronic speed and output control

Electronic speed monitoring for speed and output control
By magnetic inductive pick up over ring gear on flywheel

Starter motor
Engine mounted electric starter motor

1.01.02 Additional equipment for the engine (spares for commissioning)

The required spare parts for commissioning are included in the scope of supply.

1.01.03 Engine accessories

Insulation of exhaust manifold:
Insulation of exhaust manifold is easily installed and removed

Sensors at the engine:
- Jacket water temperature sensor
- Jacket water pressure sensor
- Lube oil temperature sensor
- Lube oil pressure sensor

- Mixture temperature sensor
- Charge pressure sensor
- Minimum and maximum lube oil level switch
- Exhaust gas thermocouple for each cylinder
- Knock sensors
- Gas mixer / gas dosing valve position reporting.
- Air Filter DP sensor
- Crankcase pressure sensor

Actuator at the engine:
- Actuator - throttle valve
- Bypass-valve for turbocharger
- Control of the gas mixer / gas dosing valve

1.01.04 Standard tools (per installation)

The tools required for carrying out the most important maintenance work are included in the scope of supply and delivered in a toolbox.

1.02 Generator-medium voltage

The 2-bearing generator consists of the main generator (built as rotating field machine), the exciter machine (built as rotating armature machine) and the digital excitation system ABB UNITROL 1010. The digital regulator is powered by a PMG system

Main components:
- Enclosure of welded steel construction
- Stator core consist of thin insulated electrical sheet metal with integrated cooling channels.
- Form wound double layer stator winding
- Pitch ratio: 5/6
- Rotor consist of shaft with shrunken laminated poles, Exciter rotor, PMG and fan.
- Damper cage
- Exciter machine with rotating rectifier diodes and overvoltage protection
- Dynamically balanced as per ISO 1940, Balance quality G2,5
- Drive end bracket, sleeve bearing + Aerotherm
- Non-drive end bracket, sleeve bearing + Aerotherm
- Cooling IC01 - open ventilated, air entry at non-drive end, air outlet at the drive end side
- Main terminal box on vibration-free support - (support supplied by INNIO, installation on concrete floor, on-site)
- Terminal clamps for power cables for cable outlet left & right with Roxtec cable glands for cable diameter 26-48 mm
- Current transformer for protection and measuring in the star point xx/1A, 5P10 15VA, xx/1A, 1FS5, 15VA
- Potential transformer: Primary: ...kV/√3, Secondary 1: 110V/√3, Secondary 2: 110V/3 open delta winding with damping resistor for ground fault monitoring
  3 Surge suppressors (capacitor + varistor + resistor)
- Regulator terminal box with auxiliary terminals for thermistor connection and regulator.
- Anti-condensation heater in main machine and main Terminal box
- 3 PT100 for winding temperature monitoring+3 PT100 Spare
- 2 PT100 for bearing temperature monitoring
- 1 Pt100 for cold air inlet temperature monitoring

Electrical data and features

- Standards: IEC 60034, EN 60034, ISO 8528-3, ISO 8528-9
- Voltage adjustment range: +/- 10 % of rated voltage (continuous)
- Frequency: -6/+4% of rated frequency
- Overload capacity: 10% for one hour within 6 hours, 50% for 30 seconds
- Asymmetric load: max. 8% I2 continuous, in case of fault I2 x t=20
- Altitude: < 1000m
- Max permitted generator intake air temperature: 5°C - 40°C
- Max. relative air humidity: 90%
- Voltage curve THD Ph-Ph: <2,5% at idle operation and <2,5% at full load operation with linear symmetrical load
- Generator suitable for parallel operating with the grid and other generators
- Sustained short circuit current at 3-pole terminal short circuit: minimum 3 times rated current for 5 seconds.
- Over speed test with 1.2 times of rated speed for 2 minutes according to IEC 60034

Operation of a generator with an external earth fault relay in a non-earthed (IT) network is limited to a maximum of 200 hours beyond its service life.

Digital Excitation system ABB Unitrol 1010 mounted within the AVR Terminal box with following features:

- Compact and robust Digital Excitation system for Continuous output current up to 10 A (20A Overload current 10s)
- Fast AVR response combined with high excitation voltage improves the transient stability during UVRT events.
- The system has free configurable measurement and analog or digital I/Os. The configuration is done via the local human machine interface or CMT1000
- Power Terminals
  3 phase excitation power input from PMG or auxiliary windings
  Auxiliary power input 24VDC
- Excitation output
- Measurement terminals: 3 phase machine voltage, 1 phase network voltage, 1 phase machine current
- Analog I/Os: 2 outputs / 3 inputs (configurable), +10 V / -10 V
- Digital I/O: 4 inputs only (configurable), 8 inputs / outputs (configurable)
- Serial fieldbus: RS485 for Modbus RTU or VDC (Reactive power load sharing for up to 31 JENBACHER engines in island operation), CAN-Bus for dual channel communication
- Regulator Control modes: Bump less transfer between all modes
  Automatic Voltage Regulator (AVR) accuracy 0,1% at 25°C ambient temperature
  Field Current Regulator (FCR)
  Power Factor Regulator (PF)
  Reactive Power Regulator (VAR)
- Limiters: Keeping synchronous machines in a safe and stable operation area
  Excitation current limiter (UEL min / OEL max)
  PQ minimum limiter
  Machine current limiter
  V / Hz limiter
  Machine voltage limiter
- Voltage matching during synchronization
- Rotating diode monitoring

- Dual channel / monitoring: Enables the dual channel operation based on self-diagnostics and setpoint follow up over CAN communication. As Option available
- Power System Stabilizer (PSS) is available as option. Compliant with the standard IEEE 421.5-2005 2A / 2B, the PSS improves the stability of the generator over the highest possible operation range.
- Computer representation for power system stability studies: ABB 3BHS354059 E01
- Certifications: CE, cUL certification according to UL 508c (compliant with CSA), DNV Class B,

- **Commissioning and maintenance Tool CMT1000** (for trained commissioning/ maintenance personal)
- With this tool the technician can setup all parameters and tune the PID to guarantee stable operation. The CMT1000 software allows an extensive supervision of the system, which helps the user to identify and locate problems during commissioning on site. The CMT1000 is connected to the target over USB or Ethernet port, where Ethernet connection allows remote access over 100 m.
- Main window
    - Indication of access mode and device information.
    - Change of parameter is only possible in CONTROL access mode.
    - LED symbol indicates that all parameters are stored on nonvolatile memory.
- Setpoint adjust window
    - Overview of all control modes, generator status, active limiters status and alarms.
    - Adjust set point and apply steps for tuning of the PID.
- Oscilloscope
    - 6 signals can be selected out of 20 recorded channels. The time resolution is 50ms.Save files to your PC for further investigation.
- Measurement
    - All measurements on one screen.

Routine Test

Following routine tests will be carried out by the generator manufacturer

- Measuring of the DC-resistance of stator and rotor windings
- Check of the function of the fitted components (e.g. RTDs, space heater etc.)
- Insulation resistance of the following components
  Stator winding, rotor winding
  Stator winding RTDs
  Bearing RTDs
  Space heater
- No Load saturation characteristic (remanent voltage)
- Stator voltage unbalance
- Direction of rotation, phase sequence
- High voltage test of the stator windings (2 x Unom. + 1000 V) and the rotor windings (min. 1500 V)

1.02.01 Hydro Jacking Oil Skid for TD125 & WD 130 Generators

Nominal voltage: 3x400/**230,** 50**Hz**
Power: 0,75 kW
Electrical connection: 5 x 2,5 mm², 10m, with CEE plug
Dimensions: Height: 608 mm
Width:474 mm
Depth: 674 mm
Standard: IEC/EN
Connection pipe: Suction and pressurised piping each with 4m quick connection according to DIN ISO 228

Operating material: HL (V) P ISO VG 32

Function:
The unit pressurizes the generator bearings on the drive end (DE) and non-drive end (NDE) so that the rotor will be raised by the oil pressure (see TA1503-0048).
The hydraulic unit is a special tool which allows crankshaft to be turned.

Electrical supply via CEE connection according to IEC 60309.
The appropriate CEE socket according to IEC 60309 to be provided locally.

The Hydro Jacking Oil Skid consists of the following components:
- 3-phase motor **400**V **50**Hz BG 80M 0,75kW 1500 rpm
- Double pump PGE104 with 1,4 L/min capacity per pump
- Pump support with connection points
- 2x Pressure filter 20 µm
- 2x Pressure limiting valve 0-200bar with hand valve
- 2x Ball valve for pressure relief
- 2x Manometer NG63 0-200 bar
- 2x connectors and hose supply 12 L
- 2x connectors and hose return supply 18 L
- 2x suction pump in return supply
- 2x In line filter 100 µm
- Terminal box

1.03 Module equipment

Module frame
Welded steel profile frame for mounting the engine, generator and heat exchangers

Flexible coupling
Plug-in, backlash-free coupling with torque limiter, connecting the engine and generator. The coupling isolates the generator from the main harmonic vibrations of the alternating torque of the engine.

Coupling housing
For a rigid centred connection between the engine and generator, with two ventilation and inspection openings for the coupling covered with perforated sheet

Flexible mounting
Rubber rails spaced evenly at the centre of gravity between the engine and the frame and the generator and the frame respectively, and Sylomer strips between the module frame and the foundation base plate to insulate against vibrations

Exhaust gas piping on the module
Connection to the turbocharger, including a compensator for taking up the thermal expansion and for isolation against vibrations

Intake air filter
Dry air filter with replaceable filter cartridges, flexible connections to the gas mixer, maintenance indicator for filter inspection.

Exhaust system flushing:
The exhaust system is purged after a false start; this is achieved either with an exhaust gas purge fan or by turning the engine with the gas valves closed

•

Interface cabinet
Fully enclosed sheet steel upright cabinet, door with rubber sealing strip. Mounted on the module, wired and ready for operation.

Paintwork: RAL 7035

Degree of protection: IP54 outside, IP20 inside (protection against accidental direct contact with live components)

Designed to comply with EN 61439-2 / IEC 61439-2
Ambient temperature 5 - 40°C, 70% relative humidity.

Dimensions:

• Height:	2100 mm
• Width	1000 mm
• Depth:	600 mm

Control current supplied from the battery charger.

Power supply to the auxiliaries: (from the supplier of the power supply systems for the auxiliaries)
3 x **400** / **230** V, **50** Hz, 50 A

Contains:
- Terminal strip
- Decentralised input/output modules connected via a data bus interface to the central engine control system in the module control cabinet
- Speed detection
- Relays, fuses, miniature circuit breakers, engine emergency circuit breaker for controlling valves and auxiliaries
- Air-conditioning unit **(optional)**

1.03.01 Engine jacket water system

Closed cooling circuit, consisting of:
- Expansion tank
- Filling device (check and pressure reducing valves, pressure gauge)
- Safety valve(s)
- Thermostatic valve
- Required pipework on module
- Vents and drains
- Electrical jacket water pump, including check valve
- Jacket water preheat device

1.03.02 Automatic lube oil replenishing system

Automatic lube oil replenishing system:
Includes float valve in lube oil feed line, including inspection glass. Electric monitoring system will be provided for engine shut-down at lube oil levels "MINIMUM" and "MAXIMUM". Solenoid valve in oil feed line is only activated during engine operation. Manual override of the solenoid valve, for filling procedure during oil changes is included.

Oil drain
By set mounted cock

Pre-lubrication- and aftercooling oil pump:
Mounted on the module base frame; it is used for pre-lubrication and aftercooling of the turbochargers.

Period of operation:	Pre-lubrication: 1 minute both pumps
	Aftercooling: 15 minutes from engine stop only the **400**/**230** V pump

Consisting of:
- 1 piece oil pump 1500 W, **400**/**230** V
- 1 piece oil pump 1500 W, 24 V
- All necessary vents
- Necessary pipework

1.05.02 Gas train

Pre-assembled, delivered loose, for installation into gas pipework to the module.

Consisting of:
- **Main gas train:**
  - Shut off valve
  - Gas filter, filter fineness <3µm
  - T-piece to the pre-chamber gas train or pre-chamber gas compressor
  - Gas admission pressure regulator
  - Pressure gauge with push button valve
  - High pressure regulator with safety-cut-off-valve (SAV)
  - Calming distance with reducer
  - Safety-blow-off-valve (SBV)
  - Pressure gauge with push button valve; after pressure regulator
  - Automatic shut-off valves
  - Leakage detector
  - Gas pressure regulator
  - Gas pressure switches (min., max.)
  - TEC JET
  - Gas flow meter (option)
  - p/t compensation (option)

The gas train complies with DIN - DVGW regulations.
Maximum distance from TEC JET outlet to gas entry on engine, including flexible connections, is 1m

- **Pre-chamber gas train:**
  - Ball valve
  - Gas filter, filter fineness <3µm
  - Automatic shut-off valves
  - Pressure regulator
  - Calming distance with reducer

- Pressure gauge with push button valve

Pre chamber gas pressure regulator (incl. stabilization section) assembled at the flexible connection pre chamber gas.

1.07 Painting

• Quality:	Oil resistant prime layer Synthetic resin varnish finishing coat	
• Colour:	Engine:	RAL 6018 (green)
	Base frame:	RAL 6018 (green)
	Generator:	RAL 6018 (green)
	Module interface panel:	RAL 7035 (light grey)
	Control panel:	RAL 7035 (light grey)

1.11 Engine generator control panel per module- DIA.NE XT4(+) incl. Single synchronization of the generator breaker

Dimensions:

- Height: 2310 mm (including 200 mm (8 in) pedestal *)
- Width: 800 -1200mm *)
- Depth: 600 mm *)

Protection class:

- external IP42
- Internal IP 20 (protection again direct contact with live parts)

*) Control panels will be dimensioned on a project specific basis. Actual dimensions will be provided in the preliminary documentation for the project.

Control supply voltage from starter and control panel batteries: 24V DC

Auxiliary equipment supply (by the supplier of the auxiliary equipment supply system)
The following network forms are possible for the supply of the auxiliary equipment. Depending on these, appropriate protective measures are provided:

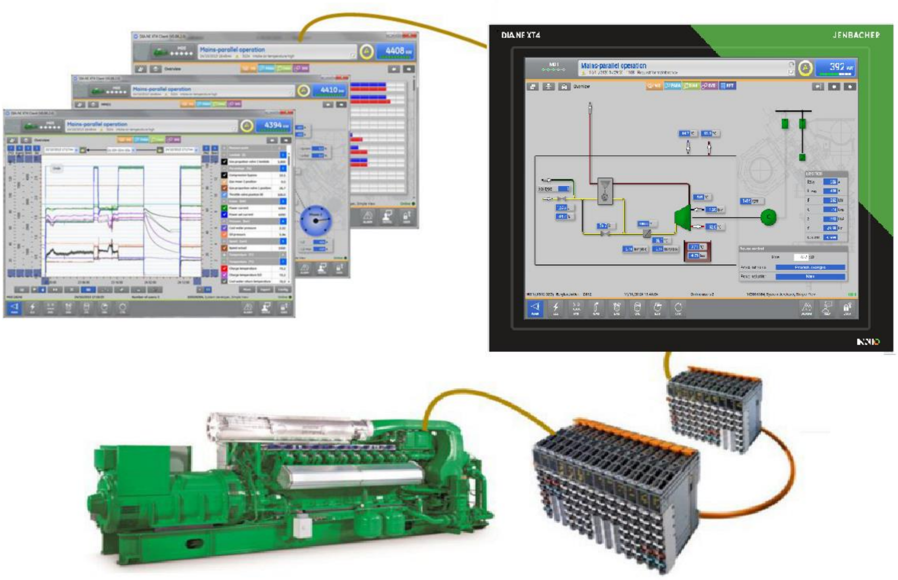
TN- S (L1/2/3, N, PE)

- Power supply via the module control cabinet via connection terminals or directly at the 3-pole mains disconnection unit. Protection against electric shock by automatic disconnection with miniature circuit breaker or fuse.
- Additional protection for sockets with fault current breaker (RCD) type A, 30 mA
- Option:
  - According to national requirements or customer wishes, a 4-pole mains disconnecting device can also be used. Especially if the neutral conductor is not considered to be reliably earthed.
  - Downstream outputs for auxiliary equipment with neutral conductors are fused using 2 or 4 poles.

3 x **400**/**230** V, **50** Hz

Consisting of:
Motor - Management - System DIA.NE

Setup:
- Touch display visualization
- Central engine and unit control



Touch Display Screen:

15“ industrial colour graphics display with resistive touch screen.

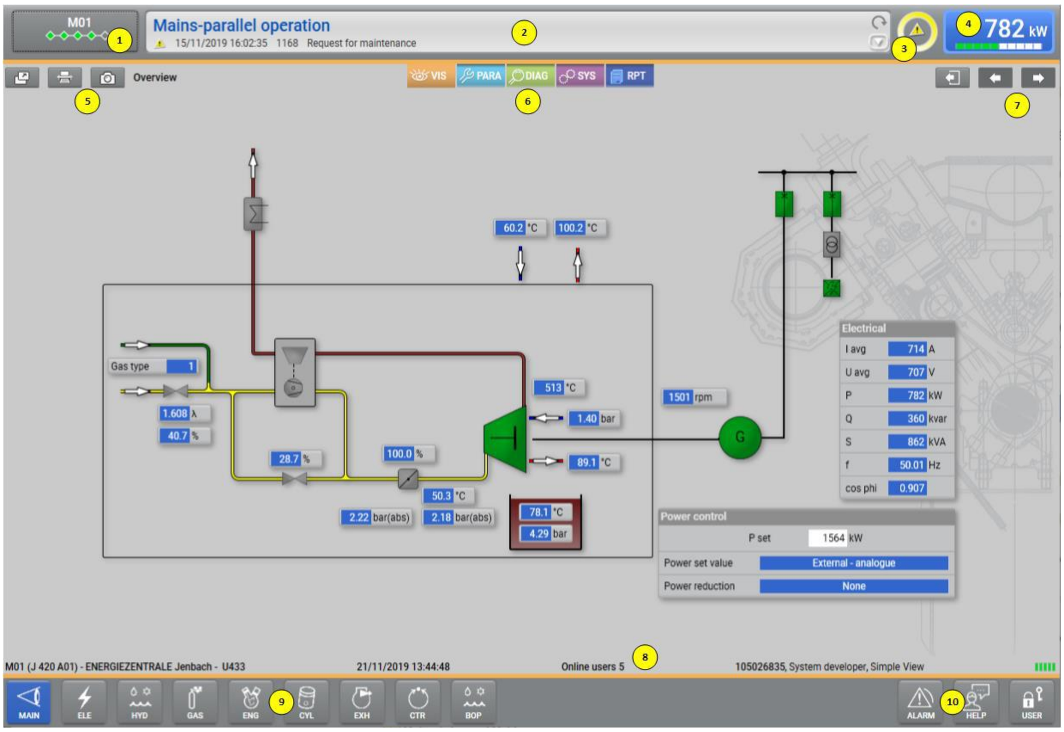
Protection class of DIA.NE XT panel front: IP 65

The screen shows a clear and functional summary of the measurement values and simultaneously shows a graphical summary.

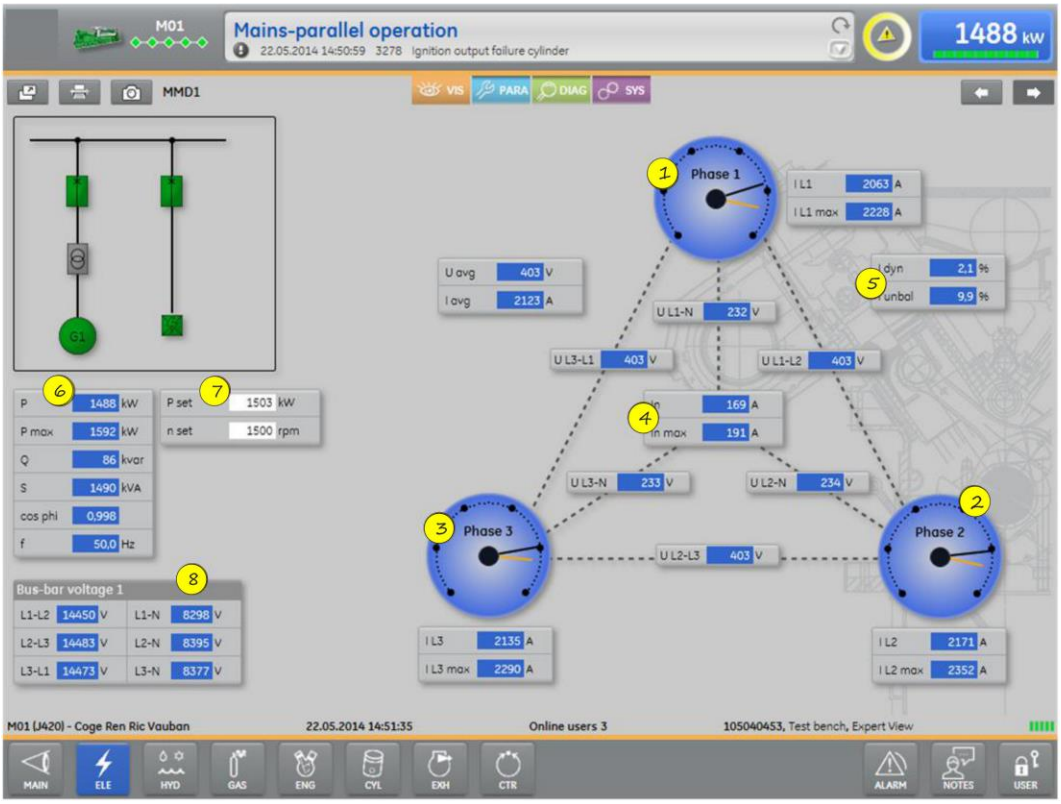
Operation is via the screen buttons on the touch screen
Numeric entries (set point values, parameters…) are entered on the touch numeric pad or via a scroll bar.
Determination of the operation mode and the method of synchronization via a permanently displayed button panel on the touch screen.

Main screens (examples):

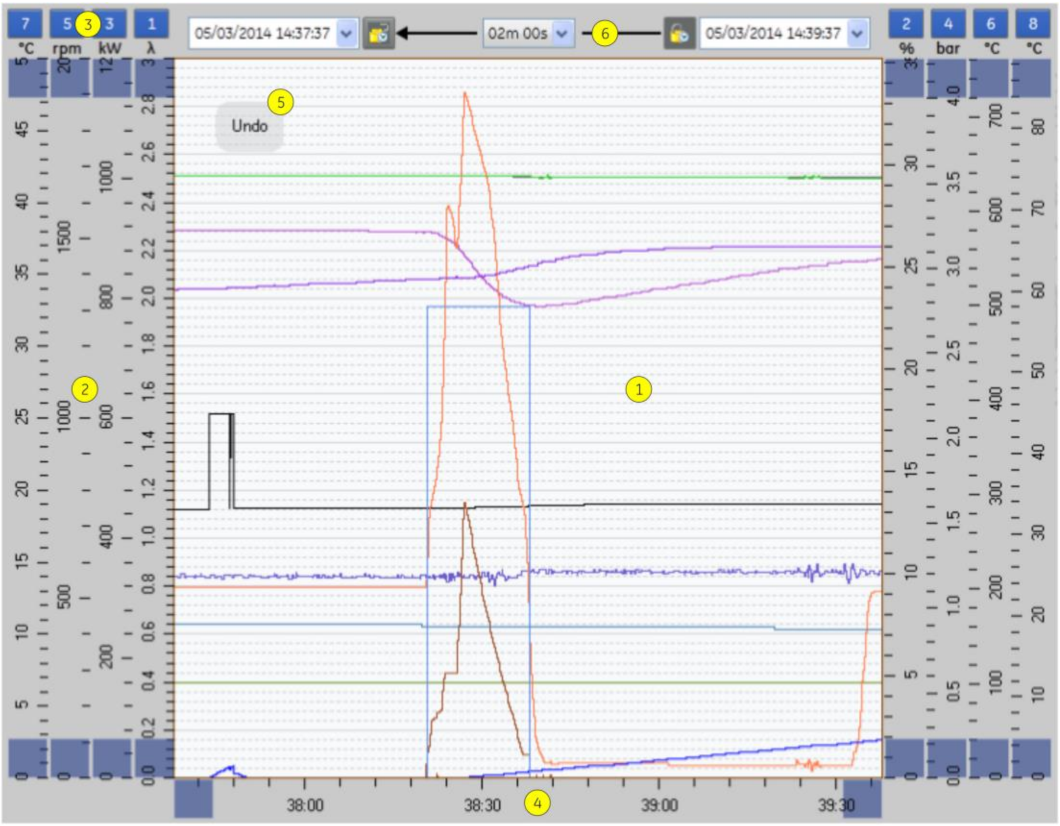
Main: Display of the overview, auxiliary's status, engine start and operating data.



ELE: Display of the generator connection with electrical measurement values and synchronization status



Trending
Trend with 100ms resolution



Measurement values:
- 500 data points are stored
- Measurement interval = 200ms
- Raw data availability with 200ms resolution: 24 hours + max. 50.000.000 changes in value at shut down (60 mins per shut down)
- Compression level 1: min, max, and average values with 1000ms resolution: 1 day
- Compression level 2: min, max, and average values with 30s resolution: 1 month
- Compression level 3: min, max, and average values with 10min resolution: 10 years

Messages:
1.000.000 message events

Actions (operator control actions):
100.000 Actions

System messages:
100.000 system messages

Central engine and module control:

A control system with modular design handles all activities for module and engine-side sequencing control (start preparation, start, stop, cooling-down running, control of auxiliary systems), as well as all control functions.

Interfaces:
- Ethernet (twisted pair) for remote monitoring access
- Ethernet (twisted pair) for connection between engines
- Ethernet (twisted pair) for the Powerlink connection to the control input and output modules.

Connection to the local building management system according to the JENBACHER option list (OPTION)
- MODBUS-RTU Slave
- MODBUS-TCP Slave,
- PROFIBUS-DP Slave (120 words),
- PROFIBUS-DP Slave (192 words),
- ProfiNet Slave
- OPC UA Server (on request)

Control functions:
- Speed control in idle and in island mode
- Power output control in grid parallel operation, or according to an internal or external set point value on a case by case basis
- LEANOX control system which controls boost pressure according to the power at the generator terminals, and controls the mixture temperature according to the engine driven air-gas mixer
- Knocking control: in the event of knocking detection, ignition timing adjustment, power reduction and mixture temperature reduction (if this feature is installed)
- Load sharing between engines in island mode operation (option)
- Linear power reduction in the event of excessive mixture temperature and misfiring
- Linear power reduction according to CH4 signal (if available)
- Linear power reduction according to gas pressure (option)
- Linear power reduction according to air intake temperature (option)

Multi-transducer to record the following alternator electrical values:
- Phase current (with slave pointer))
- Neutral conductor current
- Voltages Ph/Ph and Ph/N
- Active power (with slave pointer)
- Reactive power
- Apparent power
- Power factor
- Frequency
- Active and reactive energy counter

Additional 0 (4) - 20 mA interface for active power as well as a pulse signal for active energy

The following alternator monitoring functions are integrated in the multi-measuring device:
- Overload/short-circuit [51], [50]
- Over voltage [59]
- Under voltage [27]

- Asymmetric voltage [64], [59N]
- Unbalance current [46]
- Excitation failure [40]
- Over frequency [81>]
- Under frequency [81<]

Lockable operation modes selectable via touch screen:
- "OFF" operation is not possible, running units will shut down immediately;
- "MANUAL" manual operation (start, stop) possible, unit is not available for fully automatic operation.
- "AUTOMATIC" fully automatic operation according to external demand signal:

Demand modes selectable via touch screen:
- external demand off („OFF“)
- external demand on („REMOTE“)
- overide external demand („ON“)

Malfunction Notice list:

According to "Fault message list" (part of the documentation)

Surveillances
- Priority 1: (ignition off, generator switch open, solenoid valves closed) e.g. overspeed
- Priority 2: (solenoid valves closed, generator switch open at P < 10% Pn) e.g. oil pressure min.
- Priority 3: (request off, normal shutdown with cooling run) e.g. oil temperature max.
- Priority 4: (Warning) e.g. cooling water temperature min.

Remote signals:
(volt free contacts)
1NO = 1 normally open; 1NC = 1 normally closed

• Ready for automatic start (to Master control)	1NO
• Operation (engine running)	1NO
• Demand auxiliaries	1NO
• Collective signal "shut down"	1NC
• Collective signal "warning"	1NC

External (by others) provided command/status signals:

• Engine demand (from Master control)	1S
• Auxiliaries demanded and released	1S

Single synchronizing Automatic
For automatic synchronizing of the module with the generator circuit breaker to the grid by PLC-technology, integrated within the module control panel.

Consisting of:

- Hardware extension of the programmable control for fully automatic synchronization selection and synchronization of the module and for monitoring of the generator circuit breaker closed signal.
- Lockable synchronization selection via touch screen with the following selection modes:
  - "MANUAL" Manual initiation of synchronization via touch screen button followed by fully automatic synchronization of the module
  - "AUTOMATIC" Automatic module synchronization, after synchronizing release from the module control
  - "OFF" Selection and synchronization disabled
    Control of the generator circuit breaker according to the synchronization mode selected via touch screen.
  - "Generator circuit breaker CLOSED/ Select" Touch-button on DIA.NE XT
  - "Generator circuit breaker OPEN" Touch-button on DIA.NE XT
  - Measurement Generator breaker closing time last synchronization

Status signals:

- Generator circuit breaker closed
- Generator circuit breaker open

Remote signals:
(volt free contacts)

- Generator circuit breaker closed 1 NO

The following reference and status signals must be provided by the switchgear supplier:

- Generator circuit breaker CLOSED/OPEN each 1 NO
- Generator circuit breaker READY TO CLOSE 1 NO
- Mains circuit breaker CLOSED/OPEN each 1 NO

- Mains voltage via voltage transformers 3x 100 or 110V/v3 - other measuring voltages on request!
- Busbar voltage via voltage transformers 3x 100 or 110V/v3 - other measuring voltages on request!
- Generator voltage via voltage transformers 3x 100 or 110V/v3 - other measuring voltages on request!
- Generator voltage via voltage transformers 3x 100V or 110V/3 homopolar voltage for 59N for medium voltage generators

Voltage transformer in the star/star connection with minimum 50VA and Class 0,5

The following volt free interface-signals will be provided by JENBACHER to be incorporated in switchgear:

- CLOSING/OPENING command for generator circuit breaker (permanent contact) 1 NO + 1 NC
- Signal for circuit breaker undervoltage trip 1 NO

Maximum distance between module control panel and engine/interface panel:	30m
Maximum distance between module control panel and power panel:	50m
Maximum distance between module control panel and master control panel:	50m
Maximum distance between alternator and generator circuit breaker:	30m

1.11.01 Remote messaging over MODBUS-TCP

Data transfer from the JENBACHER module control system to the customer's on-site central control system via MODBUS TCP using the ETHERNET 10 BASE-T/100BASE-TX protocol TCP/IP.

The JENBACHER module control system operates as a SLAVE unit.
The data transfer via the customer's MASTER must be carried out in cycles.

Data transmitted:
Fault messages, operating messages, measured values (generator power, oil pressure, oil temperature, cooling water pressure, cooling water temperature, etc.) according to JENBACHER standard (interface list).

JENBACHER limit of supply:
RJ45 socket at the interface module in the module control cabinet

1.11.06 Remote Data-Transfer with DIA.NE XT4

General
DIA.NE XT4 offers remote communication using an Ethernet connection.

1.) DIA.NE XT4 HMI
DIA.NE XT4 HMI is the Human-Machine-Interface of DIA.NE XT4 engine control and visualization system for JENBACHER gas engines.
The system offers extensive facilities for commissioning, monitoring, servicing and analysis of the site.
By installation of the DIA.NE XT4 HMI client program it can be used to establish connection to site, if connected to a network and access rights are provided.
The system runs on Microsoft Windows Operating systems (Windows 7, Windows 8, Windows 10)

Function
Functions of the visualization system at the engine control panel can be used remotely. These functions provide control, monitoring, trend indications, alarm management, parameter management, and access to long term data recording. By providing access to multiple systems, also with multiple clients in parallel, additional useful functions are available like

- Multi-user system
- Remote control
- Print and export functions
- Data backup.

The DIA.NE XT4 is available in several languages.

Remote Operation:
Option1 - remote request/remote blocking (remote start/stop)
If the operating mode selector switch on the module control cabinet is set to "Automatic" and the request mode selector is set to "Remote", the module can be enabled (requested) or blocked (derequested) by a control element (button) on the DIA.NE XT4 HMI client. The request can come from a Windows PC in the local network or over a secure myPlant remote connection. The myPlant remote connection requires the myPlant Care package as a prerequisite (not included in the price)

Note:
This option also allows an additional on-site request (from the hardware or a data bus) or self-managed operation (JENBACHER station control, mains import control, etc.) to be implemented.

Option2 – Remote Acknowledgement (remote reset)
Error messages can also be acknowledged remotely on the DIA.NE XT4 HMI client, apart from those error messages incorporated in the safety loop - see TA 1100-0111, Section 12, for more information. Remote acknowledgement can come from a Windows PC in the local network or over a secure myPlant remote connection. A myPlant remote connection - myPlant care package is required to use the "remote reset" over the Internet (not included in the price). Use of this function requires an agreement to be concluded between the customer and JENBACHER laying down the procedure to be followed in the event of damage caused by a remote acknowledgement (preserving evidence) and how to establish responsibility. Proof of OPT training (operator training) and TJE (training on the job) is also required.

Scope of supply
- Software package DIA.NE XT4 HMI Client Setup (Download)
- Number of DIA.NE XT4 HMI - Client user license (Simultaneous right to access of one user to the engine control)

Nr. of license	Access
1	1 Users can be logged in at the same time with a PC (Workplace, control room or at home).
2 - “n“ (Optional)	2- “n” Users can be logged in at the same time with a PC (Workplace, control room or at home). If 2- “n” users are locally connected at Computers from office or control room, then it is not possible to log in from home.

Caution! This option includes the DIA.NE XT4 HMI client application and its license only – NO secured, encrypted connection will be provided by JENBACHER! A secured, encrypted connection – which is mandatory – has to be provided by the customer (via LAN connection or customer-side VPN), or can be realized by using option myPlant™.

Customer requirements
- Broad band network connection via Ethernet(100/1000BASE-TX) at RJ45 Connector (ETH1) at DIA.NE XT4 server inside module control panel
- Standard PC with keyboard, mouse or touch and monitor (min. resolution 1024*768)
- Operating system Windows 7, Windows 8, Windows 10
- DirectX 9.0 c compatible or newer 3D display adapter with 64 MB or higher memory

2.) myPlant™
myPlant* is the remote data transfer and diagnostics solution from JENBACHER

[1] Available soon for JENBACHER direct markets only
[2] Spark plugs, oil and air filters data might not always be available and is depending on the engine version/type ant the sensors installed
[3] Oil and coolant reports are available in myPlant for the following laboratories: Spectro, JetCare, Polaris, MIC GSM
[4] May require additional hardware installation for emission monitoring (available as upgrade)
[5] Might require development work on customer/service provider side and includes 70 API calls per engine per month

Scope of supply
- Access to myPlant™
- Integration of the plant in the myPlant™ system
- Access to Basic and Care level as per new installation contract
- Access to Professional level via separate contract

Equipment to be provided by the customer
- Permanent Internet connection (wired or wireless)
  (see also option 4)
- Technical requirements as per TA 2300-0008
- Outward data connection (from the plant server to the Internet) - INWARD connections are NOT PERMITTED!

CAUTION: The customer must take technical precautions to ensure that direct access to the plant server from the Internet is prevented (e.g. by means of a firewall):
This security measure CANNOT be assumed and guaranteed by JENBACHER

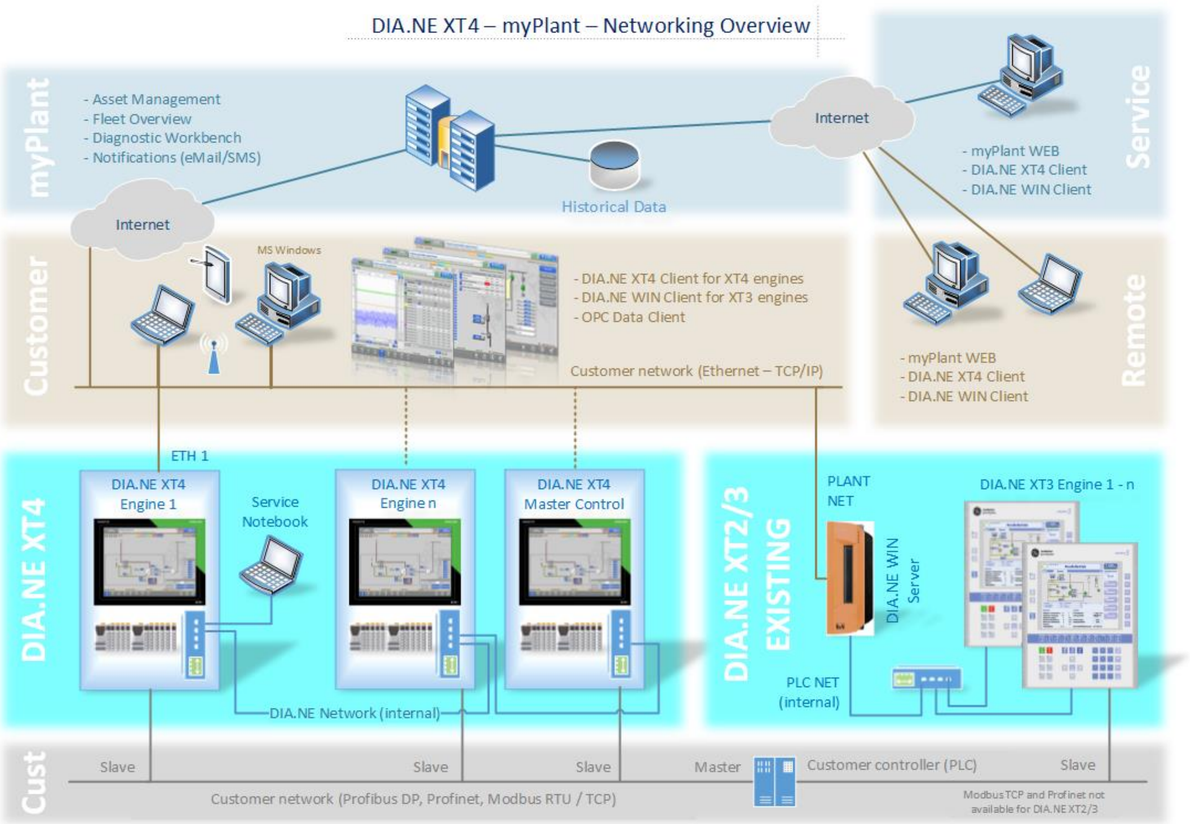
3.) Mobile Internet (OPTION)
Connection Plant - Customer via secured Internet - connection
See also technical instruction **TA 2300 - 0006**

Scope of delivery
- Mobile Internet router with antenna to connect to the DIA.NE Server XT4

Customer requirements
- SIM card for 3G / 4G

4.) Network overview

For information only!



1.11.10 Active power limitation, Reactive power control per module

Active power limitation:
The module can be operated with a reduced power output if the network operator requires a temporary limitation on feed-in power. Power logging is carried out at the generator terminals.

The customer has the option to engage in module control using the following signals:

- 0/4 - 20mA for the continuous limitation of generator active power from 100 % - 50(PMin) %
- 1 potential-free contact for blocking the module (without RESET function), as Option - in some countries the remotely shutdown of the unit within 5 seconds from receiving the signal can be required for the units of the Type Category A and B eg in Poland

or

- 4 potential-free contacts for the limitation of generator active power from 100 % - 50(PMin) %
- 1 potential-free contact for blocking the module (without RESET function), as Option - in some countries the remotely shutdown of the unit within 5 seconds from receiving the signal can be required for the units of the Type Category A and B eg in Poland

Reactive power control:
The reactive power/power factor control point is at the generator terminals

The module is designed for the process of reactive power control described below.
Set point setting via the customer using the following signals:

- 0/4 - 20mA for the continuous cos phi set point setting in the range of xx overexcited to xx under-excited

The following signal is provided to the customer by JENBACHER:

- 0/4 - 20mA for the actual value of generator reactive power
- 0/4 - 20mA for the actual value of generator active power

Further interfaces (or bus interfaces) upon request!

1.11.13 Out-of-step protection / pole slip protection (integrated in DIA.NE XT4)

ANSI Function Code 78

- 3-phase monitoring, integrated in DIA.NE XT4 controller
- Uses voltage measurement at the generator and engine speed measurement (supplied by JENBACHER).
- Allows real-time calculation of rotor angle during dynamic operations
- Allows safe detection of a pole slip risk and allows operation up to the maximum limit value
- Acting on generator circuit breaker and generator de-excitation.
- Alarm message on the DIA.NE screen.
- Active in Grid and Island parallel operation

OPTIONAL on special release:
separate digital protection relay (ATTENTION: different detection as generator and mains voltage are evaluated. Tripping only possible if pole slip has occurred)

Following monitoring are integrated in the DIA.NE generator protection package

- Load angle / pole slip monitoring
- Exciter failure monitoring [ANSI 40]

1.11.14 Generator Overload / Short Circuit Protection

ANSI Function Code 50/51

- Digital protection relay, 3-phase, integrated into the module control panel.
- Connected to the protective current transformers in the generator star point
- Acting on the generator circuit breaker and on the generator de-excitation
- Alarm message on the DIA.NE screen

Characteristics / settings:

- Setting for overload: to 1,1 times of the generating set rated current,
- Dependent time characteristic acc. to IEC 60255-151: very inverse, time multiplier setting 0,6.
- Setting for short circuit: to 2,0 times of generating set rated current,
- Independent time characteristic: 300 ms (800 ms when dynamic network support).

1.11.15 Generator Differential Protection

ANSI function code 87
- Digital protection relay, 3-phase, integrated into the module control panel.
- Connected to the protective current transformers in the generator star point (JENBACHER scope of supply) and to the protective current transformers in the generator circuit breaker panel (current transformers by client, secondary 1A, optionally: 5A).
- Acting on the generator circuit breaker and on the generator de-excitation
- Alarm message identified on the DIA.NE screen

In plants with a unit generator-transformer configuration the protection is realized as generator/transformer differential protection.

1.11.16 Generator Earth Fault Protection (nondirectional)

- Digital protection relay, integrated into the module control panel.
- Acting on the generator circuit breaker and on the generator de-excitation
- Alarm message on the DIA.NE screen

Dependent on the generator grounding method one of the following protection functions is applied:

1) **ANSI function code 50N/G**
   Detection of the earth fault current e.g. by means of a window-type current transformer (Current transformer by client, secondary 1A, optionally: 5A).
2) **ANSI function code 59N/G**
   Detection of the residual voltage e.g. by means of the voltage measured across the broken-delta secondary windings of grounded voltage transformers (voltage transformers by client)

1.11.34 Frequency sensitive control (FSM) -OPTION

The **FSM** function is used to support the stabilization of the frequency around the nominal value by moving the active power operating point when the frequency moves outside a settable dead band.
In case of over frequency, the active power frequency response is limited by the minimum regulating level. (e.g. Pmin 50%)
In case of under frequency, the active power frequency response is limited by the maximum capacity which is available. (e.g. Pn 100%)

The frequency thresholds and the droop settings are specified in the national Grid Codes and/or are specified by the network operator in the connection agreement.
Possible dead band can be set between 0 and 500 mHz

Active power frequency response capability of power-generating modules in **FSM**:

	NC RfG (Article 15)
active power range ΔP1/Pn	1,5 – 10 %
droop Δf/fn : ΔP/Pn [%]	2 - 12 %

1.20.03 Starting system excl. starter batteries

Starter battery (is not included in JENBACHER scope):
6 piece 12 V AGM battery, 125 Ah (according to DIN 72311).

Battery voltage monitoring:
Monitoring by PLC.

Battery charging equipment:
Capable for charging the starter battery with I/U characteristic and for the supply of all connected D.C. consumers.
Charging device is mounted inside of the module interface panel or module control panel.

- **General data:**
  - Power supply — **3 x 320 - 575 V, 47 - 63 Hz**
  - max. power consumption — 1040 W / 1550 W (5 sec)
  - Nominal D.C. voltage — 24 V(+/-1%)
  - Voltage setting range — 24V to 28V (adjustable)
  - Nominal current (max.) — 3 x 40 A
  - Degree of protection — IP20 to IEC 60529
  - Operating temperature — 0 °C - 70 °C
  - Protection class — 1
  - Humidity class — 3K3, no condensation.
  - Natural air convection
  - Standards — EN60950,EN50178
UL/cUL (UL508 / UL 60950-1)

Signalling:
Green Led: Output voltage > 21,6V

Control accumulator:
- Pb battery 24 VDC/18 Ah

1.20.05 Electric jacket water preheating

Installed in the jacket water cooling circuit, consisting of:
- Heating elements
- Water circulating pump

The jacket water temperature of a stopped engine is maintained between 56°C (133 °F) and 60°C (140°F), to allow for immediate loading after engine start.

1.20.08 Flexible connections

Following flexible connections per module are included in the JENBACHER -scope of supply:

No. Connection	Unit	Dimension	Material
2 Warm water in-/outlet	**DN/PN**	**100/16**	Stainless steel
1 Exhaust gas outlet	**DN/PN**	**600/10**	Stainless steel
1 Fuel gas inlet	**DN/PN**	**100/16**	Stainless steel
2 Intercooler in-/outlet	**DN/PN**	**150/16**	Stainless steel
2 Lube oil connection	**mm**	**28**	Hose

Seals and flanges for all flexible connections are included.

1.20.51 Oil counter

Mechanical oil counter to measure oil consumption. Can be installed in the fresh oil supply line to the engine with bypass valves for oil refill after an oil change.

Oil counter display:	Litre [l]
Accuracy:	+/- 3 %

2.00 Electrical Equipment

Totally enclosed floor mounted sheet steel cubicle with front door wired to terminals. Ready to operate, with cable entry at bottom. Naturally ventilated or with forced ventilation.

Protection:	IP 42 external IP 20 internal (protection against direct contact with live parts)

Design according to EN 61439-2 / IEC 61439-2 and ISO 8528-4.
Ambient temperature 5 - 40 °C (41 - 104 °F), 70 % Relative humidity

Standard painting:	Panel:	RAL 7035
	Pedestal:	RAL 7020 (Rittal TS8) RAL 9005 (Rittal VX25)

2.02 Grid monitoring device Standard 50Hz Profile 3

Standard for generating plants connected to the medium voltage grid with dynamic Grid Code requirements.

Function:
For immediate disconnection of the generator from the grid in case of grid failures.

Consisting of:
- High/low voltage monitoring
- High/low frequency monitoring
- Especially adjustable independent time for voltage and frequency monitoring
- Monitoring of the borderline of the voltage profile U_{LVRT}
- Indication of all reference dimensions for normal operation and at the case of disturbance over display and LED
- Adjusting authority through password protection against adjusting of strangers

Scope of supply:
- Digital grid protection relay with fault data storage, measured value display and self-monitoring.
- Rated input voltages: 100 V / 110 V /400V

Out of standard scope of supply:
- all necessary instrument transformers,
- additional protection equipment acc. to network operator's specifications and guidelines.
- Site specific Acceptance test.

Grid protection setting values:

Limits shown are our recommendation, final limits values are specified from the utility operator

Parameter	Parameter Limit	Time Delay	Comments
U>> [ANSI 59]	115 %U	0,2 s	Power capability reduction with 1 %Pn/%U above 105 %U
U> [ANSI 59]	111 %U	60 s	Power capability reduction with 1 %Pn/%U above 105 %U
U< [ANSI 27]	80 %U	1,5 s	Power capability reduction with 1 %Pn/%U below 95 %U
U<< [ANSI 27]	30 %U	0,3 s	Power capability reduction with 1 %Pn/%U below 95 %U
f> [ANSI 81O]	51,5 Hz	0,1 s	Power capability reduction with 10 %Pn/Hz above 51 Hz
f< [ANSI 81U]	47,5 Hz	0,1 s	Power capability reduction within the boundaries of 2 %Pn/Hz below 49 Hz; 10 %Pn/Hz below 49,5 Hz. Default: 10 %Pn/Hz below 49 Hz
Monitoring of the voltage profile U_{LVRT} [ANSI 27T]	3 %U	0 s	
	68 %U	0,27 s	
	83 %U	1,6 s	

2.03.02 Power control

According to external signal
Function:
An external potential free (0/4 - 20 mA = 50(Pmin) - 100 % of nominal power) signal is a set value for the power control.

At plants with multiple modules, this signal can be used in a series loop on every Engine Management System. This provides an equal load sharing between all modules.

2.12 Gas warning device

Function:
The gas warning device continuously monitors the radiated air in the engine room and warns against gases which are injurious to persons' health and against explosive gas concentrations.
The measuring head (catalytic sensor) is attached on the covering or nearby the ground, dependent upon the gas source.

Scope of supply:
- Alarm unit voltage: 24VDC
- 2 Gas sensor(s)

2.13 Smoke warning device

Function:
The smoke warning device in combination with the optical smoke detector (installed in the control room) and the thermal smoke detector (installed in the engine room) provide extensive early warning signal.

Design:
The device has an optical display for alarm and operation.
The smoke warning device is installed in a plastic housing.

Scope of supply:
- Alarm unit voltage: 24 VDC
- 3 Smoke detector(s)

2.15 Simulations report according UK G99 for Type B Plants

Simulations report according UK G99 for Type B Plants (<10MW)
Report includes FRT, load flow and LFSM-O simulations

Required from customer:
- Grid data at the point of connection (provided by local system operator)
- Complete electrical single diagram with information about cable types and lengths, transformer characteristics, additional loads and generation units

2.99 UK Packages

2.99.04 Electrical Metering Package

- Metering CTs for parasitic load
  Metering Cts for alternator generated power

3.01 Lube oil system (1/plant)

Consisting of:
- Electric driven fresh oil pump
- Electric waste oil pump
- Level switches
- Shut-off devices

Through simple switch over of the pumps following functions are given:
- Filling the fresh oil tank (fresh oil pump)
- Emptying of the oil pan into the waste oil tank (waste oil pump)
- Emptying of the waste oil tank (waste oil pump)
- Filling of the oil pan from the fresh oil tank

4.00 Delivery, installation and commissioning

4.01 Carriage
According to contract.

4.02 Unloading
Unloading, moving of equipment to point of installation, mounting and adjustment of delivered equipment on intended foundations is not included in JENBACHER scope of supply.

4.03 Assembly and installation
Assembly and installation of all JENBACHER -components is not included in JENBACHER scope of supply.

4.04 Storage
The customer is responsible for secure and appropriate storage of all delivered equipment.

4.05 Start-up and commissioning (not included)

Start-up and commissioning with the JENBACHER start-up and commissioning checklist is not included. Plants with island operation require internet connection.

4.06 Trial run (not included)

After start-up and commissioning, the plant will be tested in an 8-hour trial run. The operating personnel will be introduced simultaneously to basic operating procedures.
Is not included in JENBACHER scope of supply.

4.07 Emission measurement with exhaust gas analyser

Emission measurement by JENBACHER personnel, to verify that the guaranteed toxic agent emissions have been achieved (costs for measurement by an independent agency will be an extra charge).

5.01 Limits of delivery

Electrical

- Module:
  - At terminals of module interface panel
  - At terminals of generator terminal box
    (screwed glands to be provided locally)
- Module control panel:
  At terminal strips
- Auxiliaries:
  At terminals of equipment which is supplied separately

Warm water
At inlet and outlet flanges at the module

Low temperature water
At inlet and outlet flanges at the module

Exhaust gas
At outlet flange of exhaust gas connection

Combustion air
The air filters are set mounted

Fuel gas

- At inlet and outlet flanges of gas train
- At inlet flange of gas pipe work on module
- At outlet flange of the pre-chamber gas train
- At inlet flange of pre-chamber gas pipe work on module
- At connection for boost pressure compensation on module
- At connection for boost pressure compensation on gas pressure regulator of the pre-chamber gas train

Lube oil
At lube oil connections on module

Draining connections and pressure relief
At module

Insulation

Insulation of heat exchangers and pipe work is not included in our scope of supply and must be provided locally.

First filling
The first filling of module, (lube oil, engine jacket water, anti freeze-, anti corrosive agent) is not included in our scope of supply.

The composition and quality of the used consumables are to be strictly monitored in accordance with the "Technical Instructions" of JENBACHER

Suitable bellows and flexible connections **must be provided locally** for all connections.
Cables from the module must be flexible.

5.02 Factory tests and inspections

The individual module components shall undergo the following tests and inspections:

5.02.01 Engine tests
Carried out as combined Engine- and Module test based on ISO 3046-3 at JENBACHER test bench. The following tests are made at 100% load, and the results are reported in a test certificate:
- Engine output
- Fuel consumption
- Jacket water temperatures
- Lube oil pressure
- Lube oil temperatures
- Boost pressure
- Exhaust gas temperatures, for each cylinder

5.02.02 Generator tests
Carried out on test bench of the generator supplier.

5.02.03 Module tests
The engine will be tested with natural gas (methane number 94). The performance data achieved at the test bench may therefore vary from the data as defined in the technical specification due to differences in fuel gas quality.
Carried out as combined Engine- and Module test commonly with module control panel at JENBACHER test bench, based on ISO 8528-6. The following tests are made, and the results are reported in a test certificate:
Visual inspection of scope of supply per specifications.
- Functional tests per technical specification of control system.
  - Starting in manual and automatic mode of operation
  - Power control in manual and automatic mode of operation
  - Function of all safety systems on module
- Measurements at 100% load:
  - Frequency
  - Voltage
  - Current
  - Generator output
  - Power factor
  - Fuel consumption
  - Lube oil pressure

- Jacket water temperature
- Boost pressure
- Mixture temperature
- Exhaust emission (NOx)

The module test for operating frequenzy 50 Hz and 6,3-6,6kV / 10,5kV-11kV will be carried out with the original generator, except if it is not possible because of the delivery date. Then a test generator will be used for the module test.
To prove characteristics of the above components, which are not tested on the test bench by JENBACHER, the manufacturers' certificate will be provided.
In the case of a container unit the above-mentioned test procedure for the module is performed in Jenbach. JENBACHER reserves the right to perform the functional test of the container in a facility elsewhere.

5.03 Documentation

List of standard pre-documentation provided based on the technical status at the time of order receipt:

- Module drawing **1)**
- Technical diagram **1)**
- Drawings of the cabinet views **3**
- Electrical interface list **2)**
- Technical specification of the control system **2)**

Before delivery (depending on progress in ordering the components, on request)

- Technical drawings for BoP components/accessories supplied separately (if included in scope of supply of INNIO Jenbacher GmbH & Co OG) **1)**

Upon delivery

- Circuit diagrams **3)**
- Cable list **3)**

Delivered with the engine

- Brief instructions (transport, erection, moving) **1)**

For commissioning

- Operation and maintenance instructions **4)**
- Spare parts catalogue **4)**
- Original supplier operation and maintenance instructions for any BoP components (installed in the INNIO Jenbacher GmbH & Co OG scope of supply) as Appendix **1)**

  All the components found in the INNIO Jenbacher GmbH & Co OG scope of supply are described in the operation and maintenance instructions, and in the spare parts catalogue.
  In addition, the manufacturer's original operation and maintenance instructions will be provided for every BoP component, in German and English as standard, as an Appendix for the operation and maintenance manual provided.

  Additional costs of producing or providing the required documents using the KKS (power station coding system) and/or integration in subcontractors' documentation, or additional approval, design and proof of testing documentation must be negotiated or ordered separately.

This standard offer does not include:

- Approval documentation
- Design documentation
- Proof of testing documentation
- Printed copies and digital off-line versions (e.g. printed versions, CD, pdf, etc.) must be negotiated separately and ordered accordingly.

Available languages (language codes as per ISO 639-1):

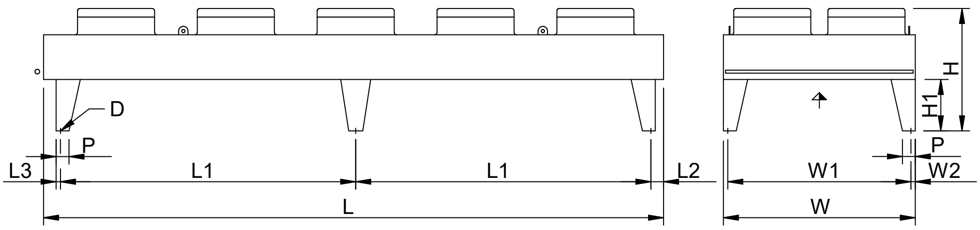
Date: 2023-08-08

Drycooler GFHV FD 080.3OF/25A-57

Capacity:	1717.0 kW[1]	**Medium:**	Ethylene glycol 37 Vol. %[2]
		Inlet:	82.9 °C
Air flow:	190749 m³/h	Outlet:	50.0 °C
Air inlet:	30.0 °C 40 %	Pressure drop:	0.86 bar
Height above sea level:	0 m	Volume flow:	49.00 m³/h
Fans (AC):	10 Piece(s) 3~400V 50HzΔ/(Y)	Noise pressure level:	57 dB(A)[3]
Data per motor (nominal data):		at a distance of:	10.0 m
Speed:	850 min-1 / (650 min-1)	Noise power level:	90 dB(A)
Capacity (mech./el.):	1.15 kW/1.55 kW	ErP:	Compliant[4]
Current:	3.30 A[5]		
Total el. power consumption:	16.79 kW	Energy efficiency class:	D
Casing:	Galv. Steel, Powder-coated RAL 7035	Tubes:	Copper[6]
Surface:	2585.6 m²	Fins:	Aluminum[6]
Tube volume:	538.9 l	Connections per unit:	
Fin spacing:	2.70 mm	Inlet:	88.9 * 2.00 mm
Dry weight:	2653 kg[7]	Outlet:	88.9 * 2.00 mm
Max. operating pressure:	10.0 bar	PED classification:	Art. 4, par. 3[8]
		Passes:	4

Dimensions:[7]

L = 11490 mm
W = 2241 mm
H = 1999 mm
H1 = 1200 mm
L1 = 5575 mm
L2 = 197 mm
L3 = 52 mm
P = 150 mm
W1 = 2137 mm
W2 = 52 mm
D = 17 mm



Attention: Drawing and dimensions not valid for all accessory options!

UI: 1WCN.34Q

Accessories	Piece(s)
Extra accessories	
Power Distribution Panel (mounted & wired)	1
1 set extended legs 1200 mm	1

Delivery time: on request (Status: 2023-08-08)

Our general terms of sales and delivery apply!

Subject to technical modifications

Important remarks / explanatory notes:

(1) Calculations and capacity tests are based on the following standards: condensers/gas coolers EN 327, evaporators/air coolers EN 328, dry coolers EN 1048.

(2) Fluid group 2 according to pressure equipment directive 2014/68/EU

(3) According to the enveloping surface method defined in EN 13487/EN 9614-1; tolerance = +2 dB(A). Applies only for AC fans, AC fans with sine control and EC fans. Noise caused by other control methods, water spraying systems or sound reflexions occurring at the installation site are not taken into account and may result in an increased sound pressure level.

(4) This unit is equipped with fans that meet the efficiency requirements of Directive 2009/125/EC (ErP Directive).

(5) The current consumption can differ in dependence of the air temperature and of the variations of system voltage according to the VDE guidance.

(6) When using the unit in aggressive atmospheres, it is imperative to select the materials according to the specific application, see material recommendation brochure in the GPC programme menu "?".

(7) Dimensions and weights are not valid for all possible options! They may differ for units with accessories or special units (S-...).

(8) Piping (DN = 84.9 mm, TSmax = 100 °C, liquid). Final classification according to pressure equipment directive 2014/68/EU during order processing.

Hendrik Ido Ambacht July 3th 2024

Dear Sirs,

With reference to your inquiry we offer you our free of charge revised budget quotation for:

47 pcs free standing silencer / chimneys with 2 in 1 silencers and flues + ducts.
1 pcs free standing silencer / chimneys with 2 in 1 silencers and flues + 1 duct.

Transport to Tilbury Docks for the whole scope.

Optional ducts in AISI 316L.

This quotation consists of:

Chapter 1 - Technical specification scope.
Chapter 2 - Prices, terms and conditions scope.

Axces Industrial Stacks B.V. is part of the Axces Group, and specialized in the engineering and, production of industrial stacks and flue gas chimneys as well as the connecting ducting or channels.

For a complete overview of the Axces Group see our website: www.axces.com. & www.axces.eu

We trust to have interpreted your requirement correctly and will contact you the soonest,

Best regards,
Axces Industrial Stacks B.V.

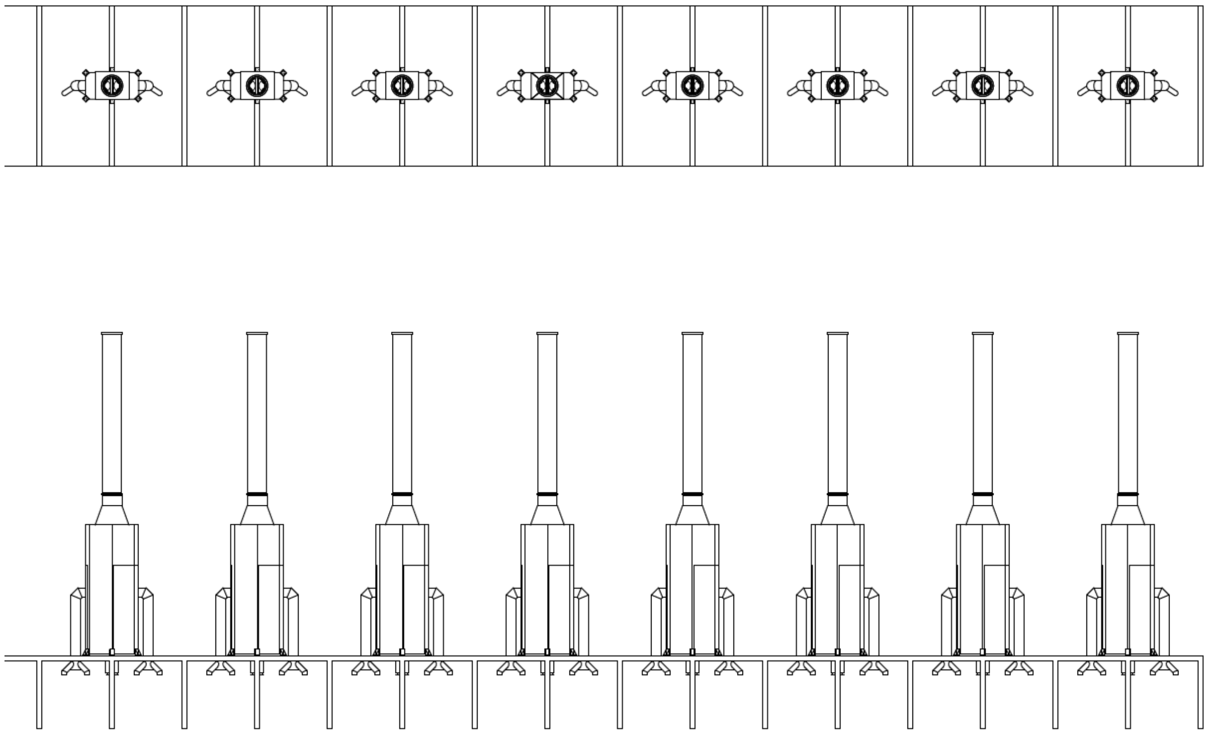
Ing. André A.J. Bassant.
Managing Director.

Axces Industrial Stacks is EN 13084-7 & ISO 9001:2015 certified by

1. CHAPTER 1 - Technical specification.

The quotation is based on the following data:

- Your RFQ as per email.
- Our alternative solution for 48 free standing silencer chimneys on the roof.
- Your revised RFQ



Impression on 1 block silencer / chimneys.

1) General

We are a company with totally open design philosophy.
We design in inventor 3d software and use special programs for chimney design.
With clients as Siemens HTT, IV consult (offshore), NEM and a good variety of produced chimney / stacks and steel structures we are proud to say we are confident in this project.

2x 50 m freestanding steelstructures with stainless steel flues made from sandwich panels.

2) Design data:

- Type of chimney : Free standing square mast structure with round windshield on new concrete.
- Situation : Windloaded over 20m.
- Design code chimney : Eurocode EN 13084-7
- Earthquake zone : N.a.
- Location : Thurrock UK.
- Type : Welded and Bolted in 2 pieces.
- Emission level flue : 25m.
- Ladders : N.a.
- CEMS : Ports in the ducts.
- **Welding flues : All full penetrant acc. to EN 13084-7.***
- **Welding steel structure : Acc. To EN 3834-2**
- **Welding procedures : Acc. to EN ISO 15614-1.**
- **Identification : CE Marking for steel structure and Flue.**
- Diameter ducts : 600 mm.
- Temperature maximum : 600°C.
- Temperature operating : 360°C.
- Below dew point : At start and stop, several times / year.
- Gas engines : Jenbacher JMS 624.
- Duration : 24/24h .
- Corrosion allowance innerflue : 0mm
- Sound : Required sound level to be 64dB(A) @ 1m from the exhaust.

Noise levels to be considered – and **costed offer** to be provided for each:

Option	Unit	1
Sound Level per Genset Exhaust Stack Outlet	dBA (Lp) @ 1m	64
Sound Level per 2 in 1	dBA (Lp) @ 1m	68
Comment	-	In line with specification

- Noise outbreak : No value specified but limited as much as the design allows.
- Visual requirements : No specific requirements, chimney should be round.
- Number engines : 95 pcs.

3) General:

This project is for the engineering, design, production and delivery of 48 free standing silencer / chimneys.
1 set is equipped with 1 duct but in case later engine 96 is installed the silencer / chimney only needs a duct.

The sound requirement is this project is verry strict, our silencer will meet the requirement theoretically.
We like to test 1 silencer before starting the production on all 48.
Hopefully you or the engine supplier can help us with finding an engine which we can use for testing.
[redacted]

After our former offer we present a new design. The design is based on the part of the former offer where we offered the standalone silencer on the roof.

We used your specification as guideline and add our knowledge of exhaust systems to design a system we think fits best in this project.

The required sound attenuation for this project with so much engines creating noise is high.
Our design is based on high attenuation on the flue top but also limit as much as possible the noise outbreak form the outside duct, silencers and flues.

Our idea for this project is the following:

New Axces design is a 2 in 1 freestanding silencer / chimney.

The former 4 in 1 silencer is now rectangle, the 2 silencers are back to back centered in between 2 engines.
The flue gasses are complete separate from the engine turbo to the chimney top.

Starting on the engine turbo's, connection to the engine compensators with a flange.
2 small duct angles into a larger vertical duct.
These part are considered a fixed point and need to be hanging on the concrete roof.

The vertical is going through the a roofcravat and made rain tight with a raincollar.
The cravats we supply to the site, probably made in the UK.

On 5*D from the inlet in the vertical duct is are 2* 3 " Cems connections on 90 degree angle in the horizontal.

After the Cems a flexible compensator to allow for thermal expansion. The entrance to the silencer with a 90° segmented elbow and a flanged connection.

The duct from turbo to silencer is offered in 4mm 16Mo3 and optionally in 6mm AISI 316L
The latter is due to the 7 bars explosion pressure and advise form engine supplier to have a stainless steel exhaust.

The square silencer is reflection / absorption type, several internal chambers create the sound reduction.

Both silencers are fully welded connected on the backsides.

The silencers are leading the wind loading forces into the concrete roof on 6 anchoring points.
This connection for now is with resin anchors but need to be engineered in detail with your civil engineer.
Queries info showed civil requires 8 supports each system. Details not known yet.

On top of the silencers there is a transition square to round with a flange. On this flange the chimney / silencer is connected.

The material of the silencers is S235Jr, due to internal e-glass there is no high wall temperature which gives a reason to use high strength steel.

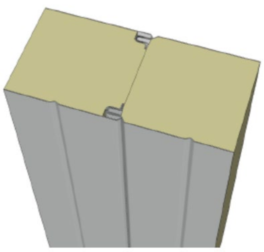
The chimney is over full length acting as a silencer. The round chimney is divided into 2 chambers, 1 for each engine fluegas.
The strong outershell will not be heated up by the flue gas the acoustical part is separate from the outershell.

From inlet to top the silencer and chimney are complete separate per engine.

The outershell is painted in RAL.

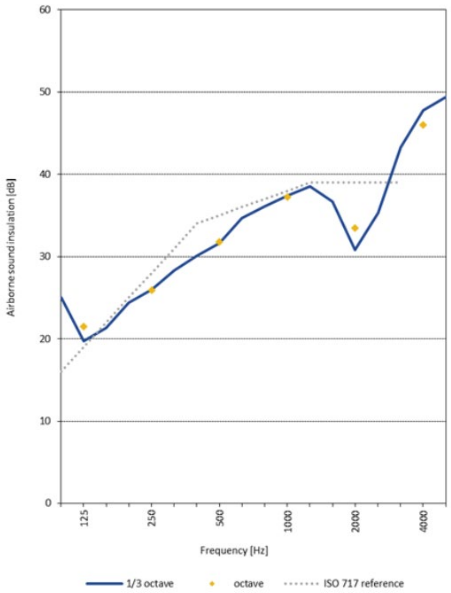
At the bottom of each steelstructure there are 2 earthing connections to be connected to earthing system by others.

To limit the outbreak noise and cover the silencers we clad the silencers with acoustical panels in RAL.
Standard with C3 (EN 14299) and optional possible with C5 coating.



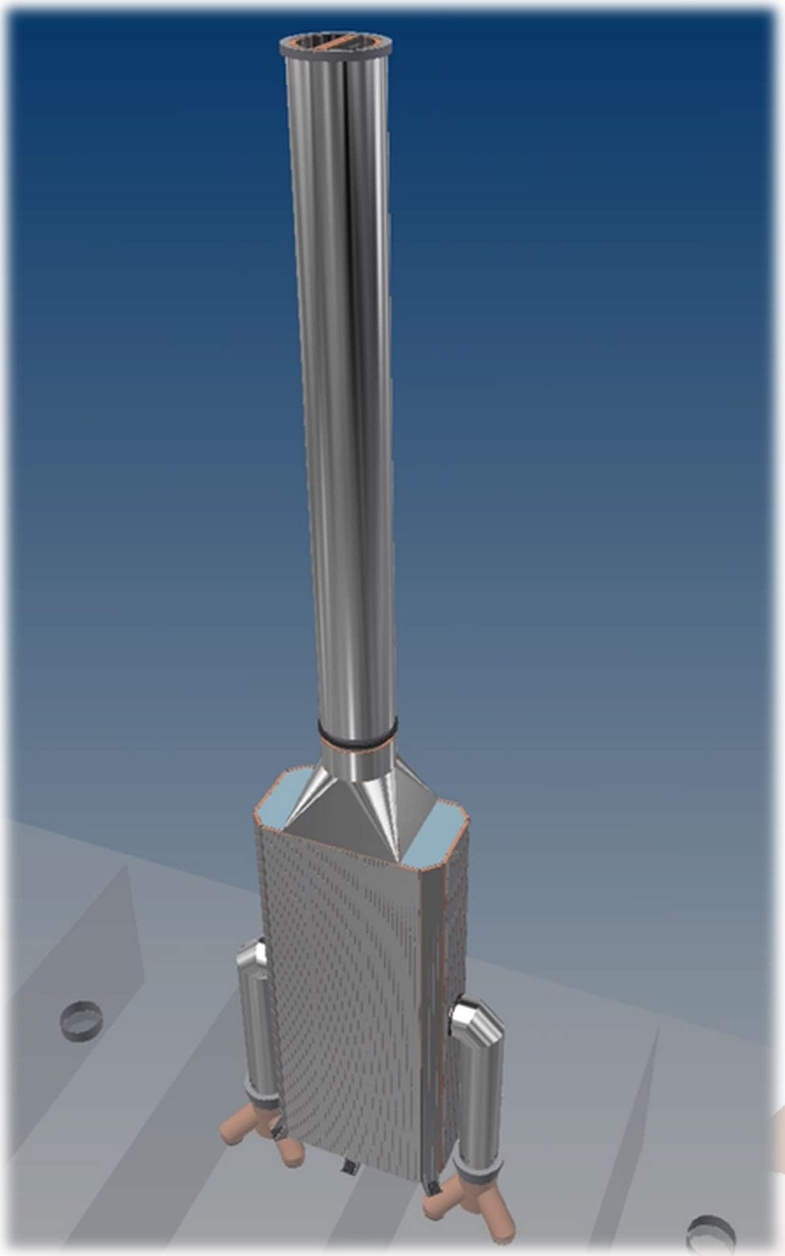
Specification on the panels

Element name	Element thickness	Outer shell	Inner cover shell	weight	Thermal resistance	Heat transfer coefficient (Ψ - Joint factor)	
	s	tN	tN	kg / m²	R	U without Ψ	U with Ψ
	mm	mm	mm	kg / m²	m² K / W	W / m² K	W / m² K
HIPERTEC WALL SOUND	60	0,60	0,60	15,3	1,34	0,711	0,731



The panels are pre fab installed in our workshop in NL.

4) Basic sketch of the system.



5) Transport:

The silencers – chimneys are prefabricated in our workshop.

The chimneys are combined with 4 pcs in a frame.
The silencers are transported from our workshop to NL.
In NL we apply the acoustical panels and wrap and combine for transport.
For now we offer 2 silencers on top of each other, which means a package 3m width 3.2 m high and 10m length.
Normal transport lengths, no exceptional transport.

We offer 2 * a vessel transport.

Vessel 1 will contain:
Everything for 32 double silencers / chimneys ducts.

Vessel 2 will contain:
Everything for 15+1 double silencers / chimneys ducts.

Power Block	Site Delivery Date	
1 (16 units off)	15/07/2025	VESSEL 1
2 (16 units off)	15/07/2025	
3 (16 units off)	21/07/2025	
4 (16 units off)	21/07/2025	
5 (16 units off)	25/09/2025	VESSEL 2
6 (15 units off)	24/11/2025	

The vessel sails probably will be 2 weeks before ETA on site.

In case the vessel arrives to soon in Tilbury we hope to find a storage area nearby the site.
At this moment this is complete unclear as the ETA Is 1 year away.

Transport from Tilbury Docks to site + offloading at site is an estimate price.
We think for logistics and feasibility best would be if the transport and offloading at site is in the scope of the company who does the install.
They know when parts are expected at site and have grip on the progress.

Estimate transports Tilbury docks to site:

All from vessel 1:
16 trailers with 2 silencers each.
 8 trailers with 4 chimneys each.
 1 trailer with 32 ducts.

All from vessel 2:
8 trailers with 2 silencers each.
4 trailers with 4 chimneys each.
1 trailer with 16 ducts.

Mentioned price for loading in the docks + transport to site + offloading on site can be removed from the offer if you agree on above.

All parts will have lifting trunnions so loading unloading and install can be done safe and fast.

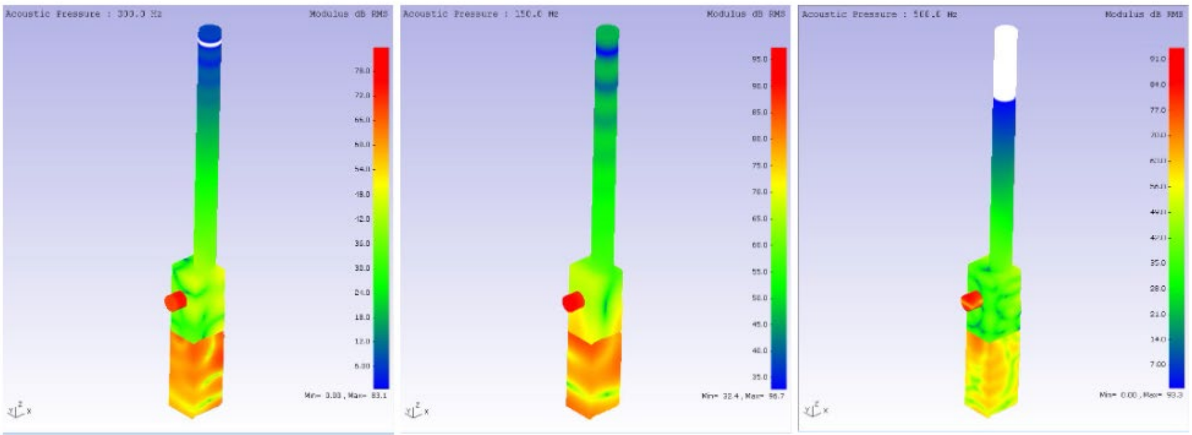
AXCES

6) Partslist pre-fab parts per 2 engines.

1) 2* Engine connection Y piece.
2) 2* pcs vertical duct.
3) 1 pcs silencer 2 in1.
4) 1pcs chimney silencer.
5) Resin anchors.
6) Bolts nuts washers gaskets.

In the table the preliminary outcome of the acoustical design calculation.

Indication of the acoustical CFD



7) Scope of supply :

- Basic and detail engineering for chimneys acc. to BS-EN 13084-7
- Basic and detail design anchors, supply of normal loads.
- Schedule and planning.
- Documents, MDR, welding, assembly, erection plans etc. **CE marking.**
- Resin anchors for now 48* 16pieces M20 cl. 8.8 galvanized.
- Resin for anchoring and sufficient drills included.

- 48 off silencers 2 in 1 rectangle 3000*1500mm length 10m.
  S235Jr 6mm, acoustical e-glass filling.
  CE marking EN 13084-7
  Nameplate with identification, CE marking, Tag no. etc.
  All flanges as per DIN 86044.

- 95 off ducts and Y pieces D 600mm 16MO3 length as per dwg.
- 95 fixed point constructions hanging support with our Axces system.
- Included each duct 2 * CEMS 3' socket with cap.

- 95 off flexible compensator welded on the pipe.
- Bolts nuts washers, gaskets for T =600C.
- 2 earthing connections each silencer.
- Top transition square -> round 6mm S235Jr.
- Outside blasting + Baril painting.

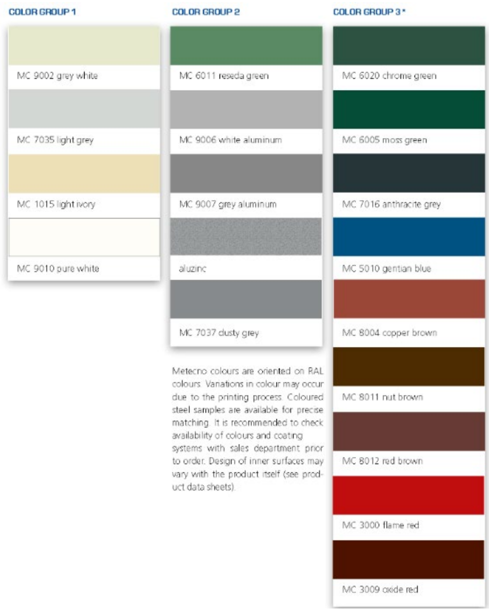
- Silencers covered with acoustical panel cladding on the mast structures.
- Thickness 60mm.

- 48 off chimney silencer diameter 1.5m Length 10m.

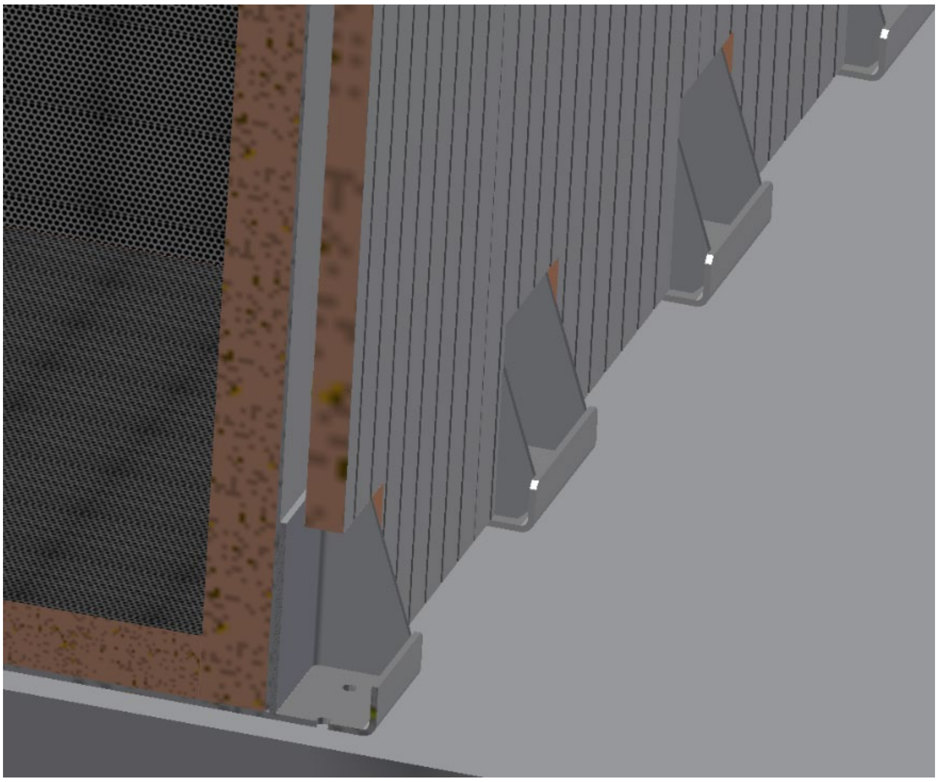
- Made from length segmented folded plates 5mm.

- Internally acoustical e-glass covered with carbon steel perforated plates.
- All flanges to be DIN 86044.
  Blasting SA 2.5 outside.

- CE marking EN 13084-7 or UK CA marking depending on delivery time.



- 2 layer C5 painting in RAL outside.
- Lifting trunnions on all parts.
- Transport support frames.
- Mounting and erection description in 3d.
- MDR docs, Declaration of performance, manufacturing data book.
-



Indication on the 8 supports of the silencer.
All resin anchors can be drilled during installation.

8) Not in our scope of supply:

- Parts not mentioned in the scope of supply.
- Optional mentioned parts.
- Measure equipment.
- Civil engineering / calculations.
- NDT testing, leakage testing.
- Roofcravats and raincollars.
- Thermal insulation on the duct in the building, we advise insulation matrasses.
- Thermal insulation on the ducts outside the building.
- Insulation matrasses to cover the compensators.

9) General notes:

The silencer and chimney will be built according to Axces standards and Eurocode, we prepare drawings complete with parts list, dimension indications welding details and assembly notes.

Noise Management Plan

Site details

Site name: THURROCK PEAKING PLANT

Site address: ………………………..

Operator name: ………………………..

Permit number: ………………………..

Who this plan is for

This plan is for the operators of the THURROCK PEAKING PLANT

Appendix E: Nosie Management Plan

Contents

1. Introduction

The Acoustics Team at Savills has been appointed by Thurrock Power Limited to prepare of a ‘noise management plan’ (NMP) as part of the ‘Environmental Permit’ (EP) application for a power generation facility (gas engines with associated plant).

1.1 Site description

The facility will be constructed on land to the north of Tilbury substation and southwest of Station Road in Thurrock, Essex. The site is in a rural area.

2Whilst the facility will potentially operate on a 24/7 basis, it is envisaged to primarily only operate during peak periods of electricity demand or to prevent system instability. This would most typically be for a period ranging from one to seven hours per day, between 08:00 and 20:00 hours. However, there is the potential that the facility could be required to operate during a major power shortage or system stress events (e.g. a Notification of Inadequate System Margin) at any time of the day or night. It should be noted that the likelihood of the facility being required to start up at night is extremely low as peak electricity demand does not occur overnight.

Based on operational experience of other similar facilities, for only around 88 hours of the night-time period (23:00 to 07:00 hours) over a year, would the facility operate, i.e. 3% of the night-time period on average.

1.2 Maintenance and review of the NMP

- The facility manager or nominated person is responsible for the NMP and ensuring people.
- The plan stored is in the facility manager’s office or nominated person’s office.
- The plan is reviewed yearly, or when a substantive noise complaint has been received.
- No specific staff training is required for this NMP.
- The facility manager or nominated person will maintain records of complaints and associated investigations due to noise on site.
- The facility manager or nominated person is responsible for carrying out noise monitoring, if required, and acting on the results of this monitoring.

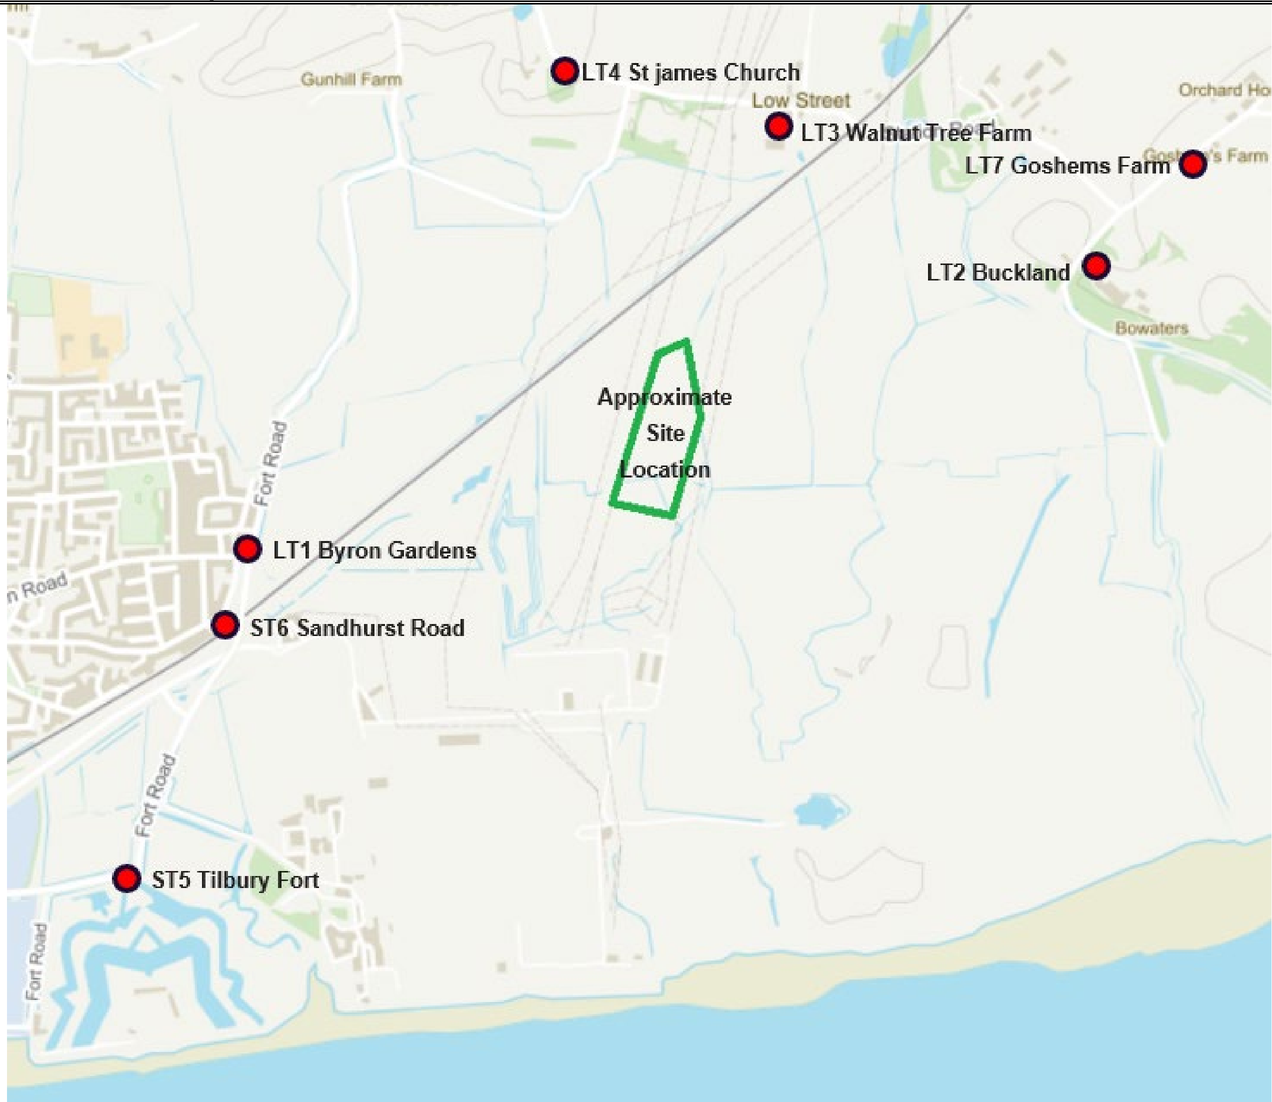
2. Receptors

2.1. Receptor List

Table 2.1. Receptor list

Receptor reference	Land use e.g. house, school, hospital, commercial	Direction from site (north, south, east, west)	Approximate distance to site boundary (m)
01 Byron Gardens	residential	South west	1,500
02 Gun Hill Farm	residential	north	1,000
03 Galsworthy Road	residential	west	1,500
04 Havers Lodge	residential	North	450
05 Buckland	residential	East	820
06 St James' Church	residential	North	820

Figure 2.1 Map of site location and receptors



3. Noise sources and processes

3.1 Noise impact assessment (NIA) conclusion

- state the overall conclusion of the noise impact assessment (low / below adverse / adverse / significant adverse impact) and the location at which this impact occurs.
- describe any important contextual points
- state which sound sources on site are dominant at nearby receptors

Maximum Rating Levels at NSR locations, i.e. when the facility is producing maximum power, would be up to 4, 8 and 10 dB above the representative background sound level during the daytime, evening and night-time periods, respectively.

However, due to low Rating Levels and resultant ambient sound levels not noticeably changing or being of a magnitude likely to increase the risk for annoyance in external amenity areas or cause sleep disturbance, it is considered that significant adverse impacts would not occur.

Furthermore, the risk for adverse impact during night-time period for is significantly reduced as for only 88 hours of the night-time period (23:00 to 07:00 hours) over the course of a year, would the facility likely be operational i.e. 3% of the night-time period on average. Also, Rating Levels would often be lower than considered, reflecting the reduced power demand.

Consequently, when considering the operation of the facility over the entire year period, the resulting site noise impact would be no greater than adverse, i.e. significant impacts/effects avoided at all NSRs for all time periods, as summarised in Table 3.1 below.

On the basis that significant adverse impacts would be avoided, and adverse impacts minimised (through the application of noise control methods/techniques detailed in Section 7) the proposed development would comply with the ‘Noise Policy Statement for England’ (NPSE), which sets out the long term overarching vision of Government noise policy.

The noise assessment completed has been based on the facility operating at 100% capacity. No unusual scenarios are anticipated. If any accident, or breakdown occurs resulting in increased noise emissions this will be rectified as soon as reasonably practicable.

Due to the nature of the facility, noise emissions are fixed and outside the control of any individual on a short-term basis. As such no controls or management practices are required in this instance.

Table 3.1. Overall Site Noise Impact

NSR	Overall: Site Noise Impact		
	Daytime	Evening	Night-time
Byron Gardens	Negligible	Adverse	Adverse
Gun Hill Farm	Negligible	Minor	Negligible
Galsworthy Road	Negligible	Minor	Adverse
Havers Lodge	Minor	Adverse	Adverse
Buckland	Negligible	Minor	Negligible
St James' Church	Negligible	Adverse	Negligible

3.2 Noise sources

Table 3.2 Description of noise emitting processes

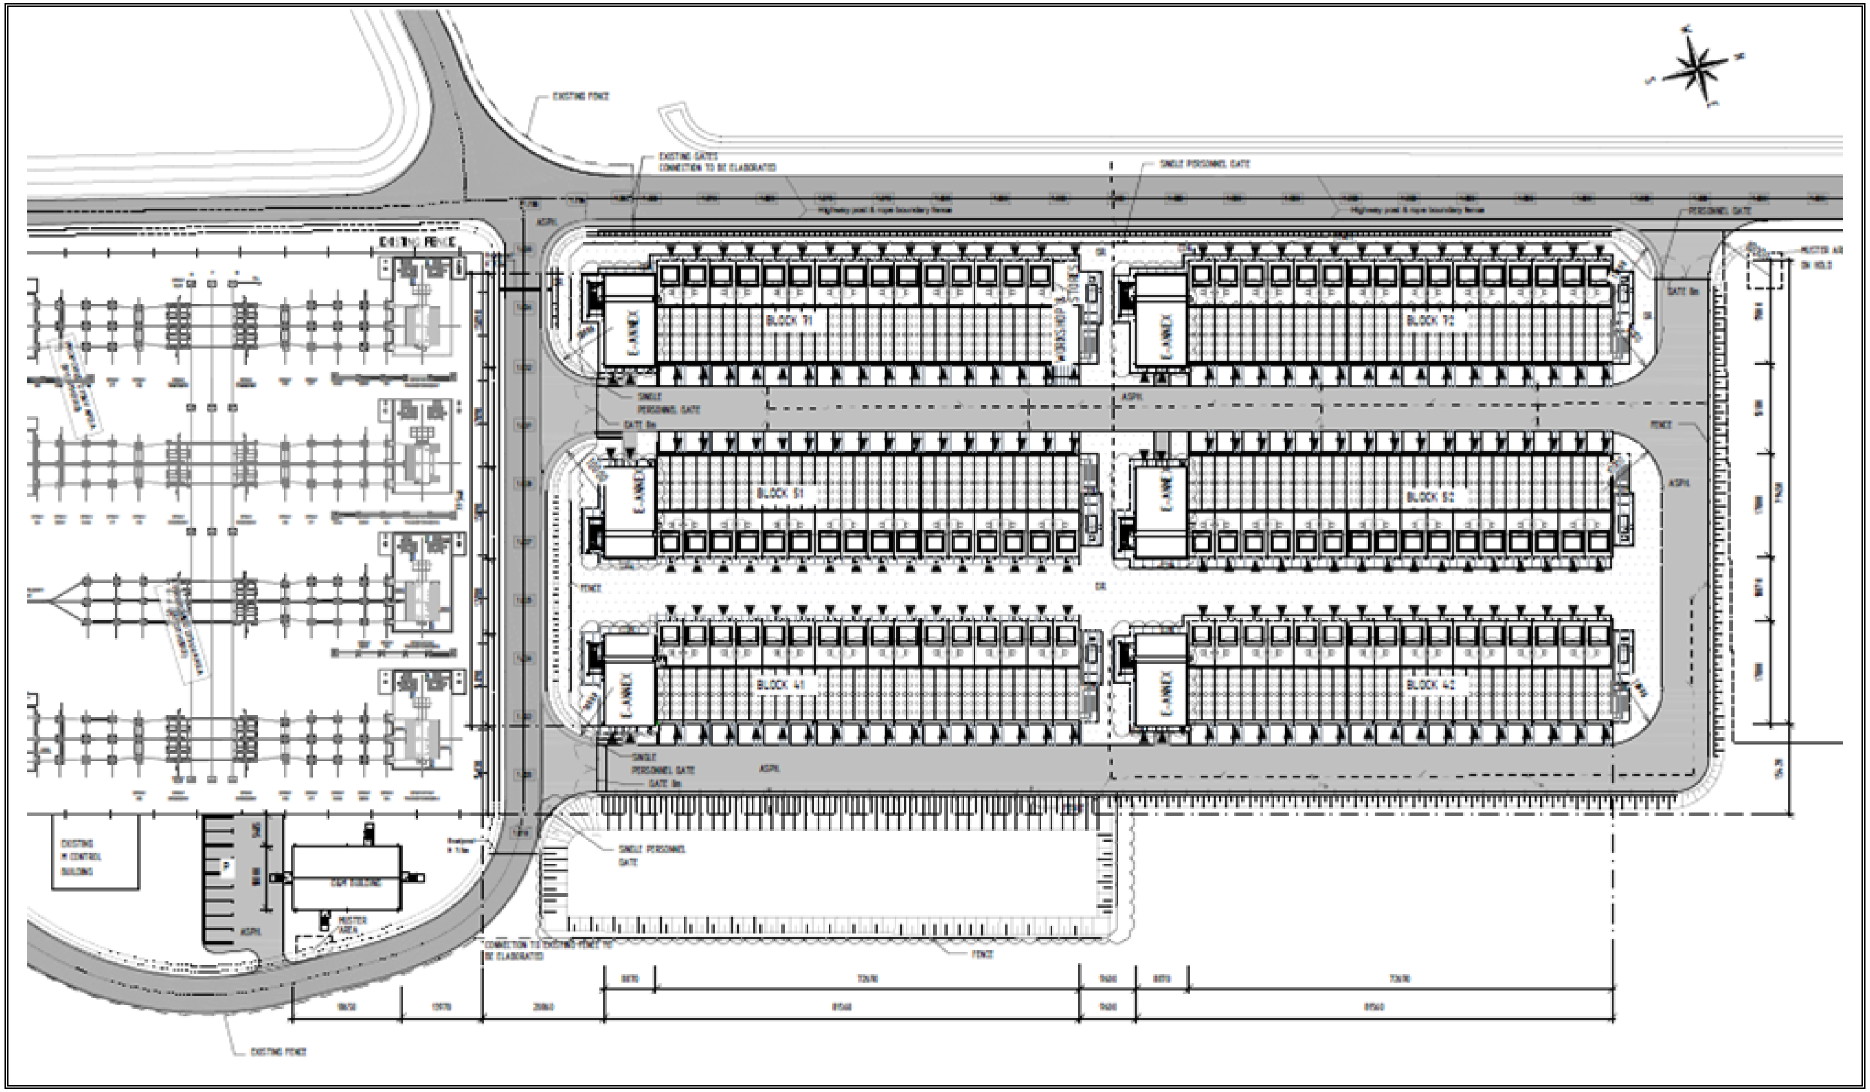
Noise source	Sound power level (dBA)	Sound pressure level (dBA)	Measurement distance (m)	Operational conditions	Additional comments
Gensets	126	-	-		In concrete enclosures 112 dB L_{pAI}
Radiators	90	-	-		On enclosure roof
Ventilation Air Intake Modules	86	-	-		Attenuated systems

Noise source	Sound power level (dBA)	Sound pressure level (dBA)	Measurement distance (m)	Operational conditions	Additional comments
Air Outlet Attenuators	89	-	-		Attenuated systems
Exhaust Stacks	84	-	-		Silenced @ 20 m AGL
Gas Pressure Regulator Skid	93	-	-		
Transformers	85	-	-		

3.3 Overview of noise processes and emissions

When required the gas fired gensets, enclosed in concrete enclosures will begin to generate electricity. Exhaust will be to atmosphere via the silenced stacks. The enclosures are ventilated with air intake and air outlet attenuators. Radiators are mounted on the enclosure roof which provide cooling.

Figure 3.3 – Site plan showing locations of noise emitting processes, with routes shown of mobile noise emitting sources



4. Control measures and process monitoring

4.1 Appropriate measures / Best available techniques (BAT)

Table 4.1 Actions and procedures which will be in place to achieve appropriate measures / best available techniques (BAT)

Activity which produces noise	Operational Hours / days	Control measures (Appropriate Measure / BAT)	Contribution to overall impact	Action taken if outside optimum process parameters
Gensets	Potentially 24/7	Concrete enclosures	Medium	Investigate reasons for elevated sound levels.
Radiators	Potentially 24/7	Low noise radiators	Medium	Investigate reasons for elevated sound levels.
Ventilation Air Intake Modules	Potentially 24/7	Attenuated modules	Medium	Investigate reasons for elevated sound levels.
Air Outlet Attenuators	Potentially 24/7	Attenuated modules	Medium	Investigate reasons for elevated sound levels.
Exhaust Stacks	Potentially 24/7	Silenced	Medium	Investigate reasons for elevated sound levels.
Gas Pressure Regulator Skid	Potentially 24/7	-	Low	Investigate reasons for elevated sound levels.
Transformers	Potentially 24/7	-	Low	Investigate reasons for elevated sound levels.

4.2 Onsite monitoring procedures

Table 4.2 Description of onsite processes which will ensure impacts do not increase on site.

Description of procedure	Procedure	When will this be carried out?	Corrective action
Subjective impressions	Monthly subjective noise testing	Monthly	If a problem arises, resulting in increased noise emissions, this will be investigated by the facility manager or nominated person and rectified as soon as reasonably practicable. Increased noise emissions will be indicative of a fault or similar with the system, potentially with health and safety risks, that will need to be remedied to ensure safe operations.

4.3 Monitoring off site sound levels

On the basis that the resulting site noise impact would be no greater than adverse, at all NSRs for all time periods, and that noise emissions will not vary due to any change in activity or similar, no routine monitoring is proposed.

5. Complaints reporting

In the event that a noise complaint is received, this will be logged and investigated by the by the facility manager or nominated person. This will be logged in a specific noise complaint document.

Complaints could be received via email or telephone, details will be on the facility boundary

Upon receipt of the complaint the this will be investigated by the facility manager or nominated person and rectified as soon as reasonably practicable. Increased noise emissions will be indicative of a fault or similar with the system, potentially with health and safety risks, that will need to be remedied to ensure safe operations. Any remedial action taken will be logged in the specific noise complaint document.

It is likely that if noise levels have increased this will indicate an issue with the facility, other than just noise related, so this will be rectified promptly. However, if this does not solve the issue off site observation and monitoring, if required, will be undertaken by a competent person. Any monitoring will be logged in the specific noise complaint document.

If deemed necessary, i.e. serios issue, or one that cannot be remedied within 4-weeks the EA will be notified and logged in the specific noise complaint document.

Following the remedial works feedback will be sought from the complainant and logged, and the EA notified if necessary.
