

Appendix C3 3b Table 4 continued

Name of the installation	BJ7298IF – Process 6 – ferric chloride
If the TGN or your risk assessment shows that emissions of substances not controlled by emission limits are an important issue, send us your plan for managing them	Not applicable as chlorine emissions will be monitored and there are no other fugitive emissions from this process.
Where the TGN or your risk assessment shows that odours are an important issue, send us your odour management plan.	Not applicable – no odour due to scrubber system that will be in operation.
If the TGN or your risk assessment shows that noise or vibration are important issues, send us our noise or vibration management plant (or both)	Not applicable – no noise or vibrations recorded as issues, to be located on an industrial site.

Name of the installation	BJ7298IF – Process 7 – Sulphuric acid evaporation/strengthening
If the TGN or your risk assessment shows that emissions of substances not controlled by emission limits are an important issue, send us your plan for managing them	Not applicable as the sulphuric acid goes to storage and the condensate goes into IBC's for removal from site*
Where the TGN or your risk assessment shows that odours are an important issue, send us your odour management plan.	Not applicable – no odour due to scrubber system that will be in operation.
If the TGN or your risk assessment shows that noise or vibration are important issues, send us our noise or vibration management plant (or both)	Not applicable – no noise or vibrations recorded as issues, to be located on an industrial site.

\*It is yet to be agreed if the condensate is sent back to the supplier as a by-product or if ICL will have to organise off-site disposal.

Name of the installation	BJ7298IF – Process 8 – PolyAluminium Chloride
If the TGN or your risk assessment shows that emissions of substances not controlled by emission limits are an important issue, send us your plan for managing them	Appendix C3 3b details the use of a scrubber unit connected to the process to remove HCl from the steam from the reaction & the conveyor system will be enclosed to prevent dust emissions.
Where the TGN or your risk assessment shows that odours are an important issue, send us your odour management plan.	Not applicable – no odour due to scrubber system that will be in operation.
If the TGN or your risk assessment shows that noise or vibration are important issues, send us our noise or vibration management plant (or both)	Not applicable – no noise or vibrations recorded as issues, to be located on an industrial site.

Name of the installation	BJ7298IF – Process 9 – Sodium Silicate
If the TGN or your risk assessment shows that emissions of substances not controlled by emission limits are an important issue, send us your plan for managing them	Appendix C3 3b details the steam released from the reactor coils is the only emission, plus the annual emptying of the slops tank.
Where the TGN or your risk assessment shows that odours are an important issue, send us your odour management plan.	Not applicable – no odour due to scrubber system that will be in operation.
If the TGN or your risk assessment shows that noise or vibration are important issues, send us our noise or vibration management plant (or both)	Not applicable – no noise or vibrations recorded as issues, to be located on an industrial site.

Name of the installation	BJ7298IF – Process 10 – Sodium Citrate
If the TGN or your risk assessment shows that emissions of substances not controlled by emission limits are an important issue, send us your plan for managing them	Not applicable – there are no emissions to air & the only waste is the water to sanitize the system.
Where the TGN or your risk assessment shows that odours are an important issue, send us your odour management plan.	Not applicable – no odour due to scrubber system that will be in operation.
If the TGN or your risk assessment shows that noise or vibration are important issues, send us our noise or vibration management plant (or both)	Not applicable – no noise or vibrations recorded as issues, to be located on an industrial site.

Name of the installation	BJ7298IF – Process 11 – Aluminium sulphate
If the TGN or your risk assessment shows that emissions of substances not controlled by emission limits are an important issue, send us your plan for managing them	Not applicable – there are no emissions to air & is the undissolved spent hydrate is the only waste and is less than 20te per annum.
Where the TGN or your risk assessment shows that odours are an important issue, send us your odour management plan.	Not applicable – no odour due to scrubber system that will be in operation.
If the TGN or your risk assessment shows that noise or vibration are important issues, send us our noise or vibration management plant (or both)	Not applicable – no noise or vibrations recorded as issues, to be located on an industrial site.
