

## **ACL 1 – ACL Environmental Services Limited - Changes to Environmental Permit - Land/Premises at Griffen Close, Staveley, Chesterfield, Derbyshire, S43 3LJ**

### **Existing Permit**

In response to question 2b on the Part C2 form varying a bespoke permit this high-level document was created.

The current environmental permit reference EAWML 65557 currently operated under an existing Bespoke Environmental Permit for A16: Physical Treatment Facility. The permit variation wishes to add additional EWC codes for dewatering and to add washing as a treatment method, however, still maintain the exiting EWC codes, treatment and storage techniques.

The changes are highlighted in the sections below with reference to the supporting document where the information can be found.

A Non-Technical summary can also be found reference ACL 2 in response to Part C2 5c.

### **R and D codes**

Existing R and D codes to remain the same in line with existing permit.

### **Permitted Area**

The permitted area will remain the same.

### **Waste types and tonnages**

The waste types currently permitted under the current permit are to remain, with the addition of those added in document reference ACL 3. The annual tonnage will remain at 75,000 tonnes per year.

### **Treatment techniques**

The treatment techniques currently permitted will remain with the addition of the screening and washing of road sweeping and gulley wastes and the resulting treatment of wash waters via flocculation and de-watering of road sweepings under gravity.

In addition, there will be the dewatering and screening of various non-hazardous liquid and sludge based wastes.

### **Charging scheme**

The new activity will be classed as 1.16.14 - Physical and chemical treatment of waste.
