## NOxMASTER™ - Ammonia Slip Statement

Each NOxMASTER™ SCR system, combined with the NOxMASTER™ Dosing system, is uniquely sized according to the specific engine and operating conditions of each application.

During the commissioning procedure, our skilled commissioning engineers will set up the dosing system based on the engines live operational behavior, using a calibrated portable flue gas analyser, which is in addition to the on-board NOx Sensors, that are integrated into the NOxMASTER™ dosing system.

Due to Agriemach's many years of experience, along with the efficiency of our NOxMASTER™ dosing system, we can offer a guarantee that the NOxMASTER™ SCR system will not experience "Ammonia Slip", based on the live parameters recorded during commissioning.
