Emily

Its no change - the change is how its been determined / worked out. I understand the change is due to the volume being digested sludge being transported to the site, is now what they have based the volume on, whereas in the past I believe they were looking at the output of the process as the basis for the throughput.

The IED permitting process which has been going on across the water industry for the last couple of years has thrown up similarly large increase in throughputs due to changing how throughputs were calculated, for those sites which have undergone the Reg 61 process.

Hi Mark,

Just to confirm on this tonnage, is this what they are currently doing and there is no change to the activities? Or are they looking to increase as part of this variation?

Regards
Emily Ball

Emily

Yes, it is indeed about 1.5million tonnes incoming wastes for treatment.

Mark
