QUALITY YOU'D EXPECT FROM A LEADING MANUFACTURER

UNBRAKO Concrete Panels are quick and easy to erect. The panels simply clip to steel columns using the cleats and bolts provided or can be located between the flanges of steels.

Once installed the double bevel on UNBRAKO panels allows for easy sealing if necessary.

The smooth finish helps the panels remain clean & allows easy cleaning. UNBRAKO panels are manufactured using very high strength concrete and reinforced using 9.3mm strand which is the best method available.

This makes UNBRAKO panels the ideal choice to withstand the modern farm environment.

Our quality control team ensure that UNBRAKO panels are made to the highest standard.

Concrete Panel Data

Unit Dimensions	
Thickness	100mm, 150mm, 180mm
Width	500mm, 600mm, 1000mm, 1200mm and 1500mm
Length	Any length up to 7500mm available

Maximum Service Load	
100mm Thick	14KN-m
150mm Thick	51KN-m
180mm Thick	88KN-m

Concrete Mix	
Maximum compressive strength 60N/mm ² 28 days	

Pre-stressing reinforcement	
9.3mm Strand
