

<b>Bioresources - Tankered Trade Waste</b>			
<b>Document Title</b>	SOP 19 Tankered Domestic Waste (TDW) On Site Sampling Procedure		
<b>Document Owner Role</b>	Process Manager	<b>Version Number</b>	1.2
<b>Date of Last Review</b>	22/07/2024	<b>Date of next Review</b>	23/07/2026
<b>Identified Risks</b>			
<ul style="list-style-type: none"> <li>• HS&amp;W risks associated with unsuitable / volatile / hazardous waste streams.</li> <li>• Excessive solids could damage the pipework infrastructure</li> <li>• Activated Sludge Process lanes collapse: from Overloading of nutrients <ul style="list-style-type: none"> <li>○ Inhibition of the microbial activity through the introduction of too many inhibitory compounds such as metals or cyanide or pH concentrations are too extreme</li> </ul> </li> <li>• Digestors inhibits Methane (CH<sub>4</sub>) generation due to: <ul style="list-style-type: none"> <li>○ excessive volume of heavy metals such as Chromium (Cr III) and Cadmium (Cd)</li> <li>○ They can poison the active bacteria and inhibit the methanogenic bacteria</li> <li>○ This leads the presence of organic acids</li> </ul> </li> <li>• Combined Heat Power process impacted by: <ul style="list-style-type: none"> <li>○ High concentrations of Hydrogen Sulphide (H<sub>2</sub>S) can damage engines</li> <li>○ High concentrations of Siloxanes (Si) pas through the biogas and result in silica deposits.</li> <li>○ These damage the engine valves, oil life etc leading to greater downtime and more equipment to be replaced</li> </ul> </li> <li>• Compliance risks</li> <li>• Loss of waste permits if waste not listed on them permitted or waste does not have the appropriate EWC.</li> <li>• Final effluent discharge consents missed due to high solids or heavy metals or Phosphorus (P)</li> <li>• BAS Compliance for Biosolids non-conforming if too high metal content</li> <li>• Wider environmental damage from failures of the treatment processes due to unsuitable waste streams being accepted.</li> </ul>			
<b>If this is a printed version, please ensure that it is still within the current review period, if not 'DO NOT USE' and contact your line manager for a new version</b>			
<p><b>Remember – If you can't do the job safely, don't do it.</b></p> <p>'DO NOT CARRY OUT THE PROCEDURE' And seek advice from your line manager</p>			

#### Introduction

This procedure explains how to get a TDW sample whilst on site including the correct instructions to give the customer on how to obtain a representative sample from the domestic tanker.

<b>Key Roles and Responsibilities</b>	
Tankered Trade Waste Manager (TWM):	<ul style="list-style-type: none"> <li>○ Ensure that the operating procedures are followed</li> <li>○ Ensure that the Tankered Trade Waste Technicians (TTWT) have undergone appropriate training</li> <li>○ Can make approval decisions if they have been deemed as technically competent</li> <li>○ Investigate HSW &amp; Environmental concerns from the TTWT</li> </ul>
Tankered Process Team (TPT):	<p>In absence of the TTWM:</p> <ul style="list-style-type: none"> <li>○ Ensure that the operating procedures are followed</li> <li>○ Ensure that the Tankered Trade Waste Technicians (TTWT) have undergone appropriate training</li> <li>○ Can make approval decisions if they have been deemed as technically competent</li> <li>○ Investigate HSW &amp; Environmental concerns from the TTWT</li> </ul>
Tankered Trade Waste Technicians (TTWT)/Technical Competent Persons(TCP):	<ul style="list-style-type: none"> <li>○ TTWT have undergone appropriate training and have a valid CMS certificate</li> <li>○ TTWT have been deemed as technically competent</li> <li>○ Ensure driver has the correct PPE</li> <li>○ Raise concerns with the TTWM and commercial team if the driver is not sufficiently trained to use their tanker equipment and controls</li> <li>○ Follow the non-conformance procedure if a waste is not domestic toilet/septic waste and do not permit the load to discharge</li> </ul>
Commercial Team:	<ul style="list-style-type: none"> <li>○ Liaise with TTWT regarding non-conformance issues</li> <li>○ Contact customer if more information is required about a non-conformance</li> <li>○ Contact customer if waste delivery is rejected</li> </ul>
Tanker Driver :	<ul style="list-style-type: none"> <li>○ Driver must adhere to STW PPE and safety regulations whilst on site</li> <li>○ Driver must give a representative sample from his waste delivery</li> </ul>

<b>Required Training</b>	
Tankered Trade Waste Technicians (TTWT)	<ul style="list-style-type: none"> <li>● In date EMS training</li> <li>● Experience undertaking sampling and preparing samples for the laboratory</li> <li>● Raising concerns of HSW &amp; Environmental to Process team or Tankered Trade Waste Manager</li> <li>● Collect samples from tankers onsite</li> <li>● How to raise a non-conformance</li> <li>● How to use CWID</li> </ul>
Tankered Process Team (TPT)	<p>The requirements for the TTWT in addition to:</p> <ul style="list-style-type: none"> <li>● Tankered Waste experience or 12 months experience in the waste industry</li> <li>● CIWM Hazardous Waste Classification course</li> <li>● Cranfield University Biological Processes/Activated Sludge Treatment course</li> <li>● University degree or similar level of experience and knowledge in a Scientific Area</li> </ul>

<p>Tankered Trade Waste Manager (TWM):</p>	<ul style="list-style-type: none"> <li>• In date EMS training</li> <li>• Experience of working in the Waste Industry</li> <li>• Understanding of Health, Safety, Wellbeing and Environmental Compliance</li> <li>• Able to support with decisions on acceptance/rejections if they have the competencies outlined for the TPT</li> </ul>

**Procedure:**

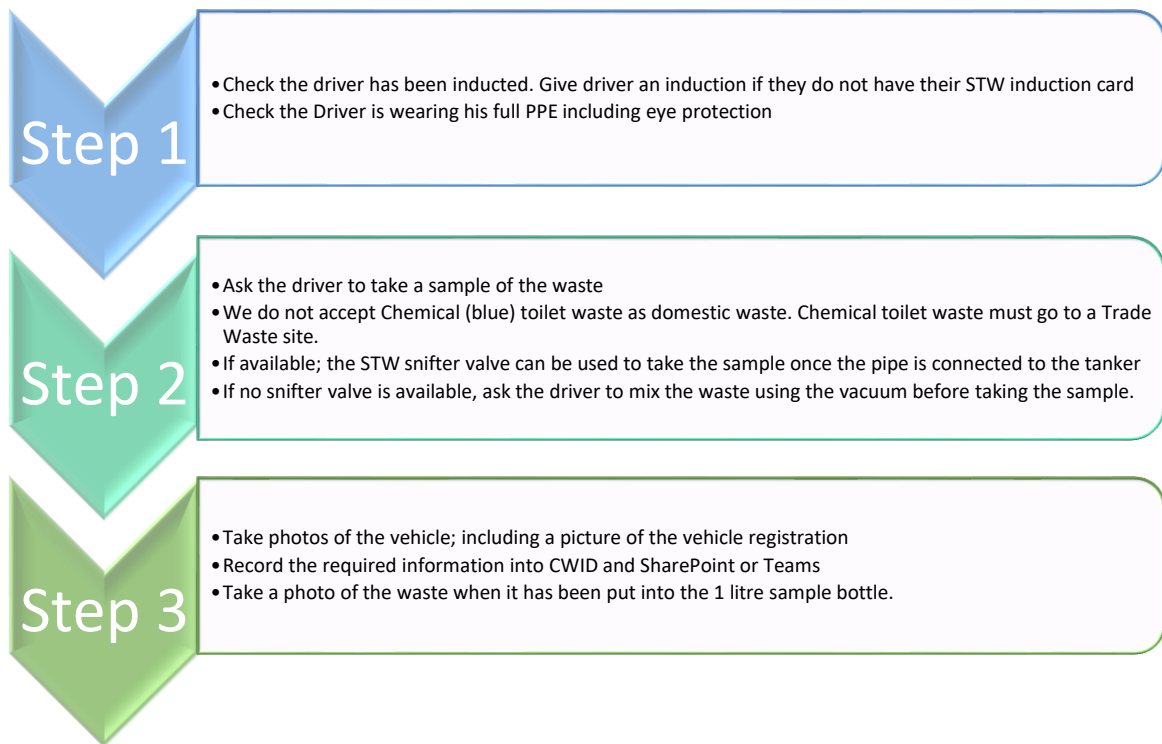

Figure 1. Process overview

## Logging Working Hours

On arrival, the technician must open WhatsApp on their phone and take a photo of the logger screen. Make sure that the site name, date and time is clearly visible. Type “arrival” and add the note, and photo to the TDW login at site group. Repeat this when taking a lunch break and at the end of the day with the relevant note inserted.

Take a photo of the samples in the fridge at the end of the day and add this to the TDW login at site group.

## Site Condition Tracker

On each site visit, the tech must do a check of the inlet and fill out the spreadsheet: [TDW Site Condition tracker.xlsx](#). The inlet should have signage informing the driver of the correct PPE they must wear, what to do if a spillage occurs and who to contact if there is an accident or if there is any damaged or faulty equipment. There should be a yellow bin at each inlet containing a spill kit.

If unable to deal with the tankers for a prolonged period, for example if dealing with a non-conformance issue, or an IT issue, make a note on the sample tracker of the issue, the time and the period of time it took.

## Arrival of TDW Customer

Samples must be taken from as many tankers as possible. This includes repeat customers because the waste the customers collect will be from different places each time and therefore will need sampling. It takes approximately twenty minutes to sample one tanker and enter the data required. Sample one tanker at a time and ensure all the data is entered correctly before moving onto the next customer.

When a TDW driver arrives on site:

- Check the driver has been inducted and can provide a site induction card. If the driver is not inducted, the TCP should follow the STW site induction procedure. The driver **must** wear the correct PPE whilst they are working on a Severn Trent Water site. Mandatory PPE includes high visibility vest/ jacket, Safety boots, gloves and eye protection. A hardhat or bump cap and ear protection should be available for use if needed. The driver must not wear shorts whilst off-loading.
- Ask to see the Duty of Care documentation or any other paperwork concerning the load. Documentation may not always be available. Record if the driver had any documentation for the waste in the [Domestic waste sampling tracker .xlsx](#)
- Take a photograph of the front and side of the tanker, clearly showing the registration plate and any company branding. Check the photos are clear before saving them to CWID.
  - To take a photo – create a new sample in CWID as shown below and in image 2 and 3.
  - Click on the Notes section and in “Enter a note” write description and click on the camera icon underneath on the left of the box.
  - Only one photo per note can be entered. Make separate note for each photo.

- Once the photos have been attached to CWID skip to obtaining a TDW sample. The remaining data can be entered whilst the driver is offloading. Once the sample has been bottled up, take a photo of the waste and add it into the notes section on CWID.
- **Important change to TDW: Chemical (Blue) toilet waste is no longer accepted as domestic waste.** Any chemically treated toilet waste is now classified as trade waste and can only be accepted at one of our 10 Tankered Trade Waste sites listed below.
  - Rugby
  - Minworth
  - Netheridge
  - Wanlip
  - Monkmoor
  - Stoke Bardolph
  - Strongford
  - Scunthorpe
  - Clay Mills
  - Rushmoor
  - Finham

## Create a New TDW Sample and Enter data into CWID

- Using the iPad, open the Microsoft Dynamics App
- Chose “Waste streams” from the left hand column (image 2) and in “search this view” type in \* and then customer’s name. E.g. \*Bob’s Tankers, and press enter.
  - If the right customer’s name does not appear in the list, try typing part of the name. For example; if the customer’s name is Bob Hop Tankers, try typing \*Bob or \*Bob Hop and the correct option should come up.
- Chose the correct customer from the list
- Click on the samples tab shown in image 2
- Click on +New Sample (Image 3)
- Fill in the required data for the sample (image 4)

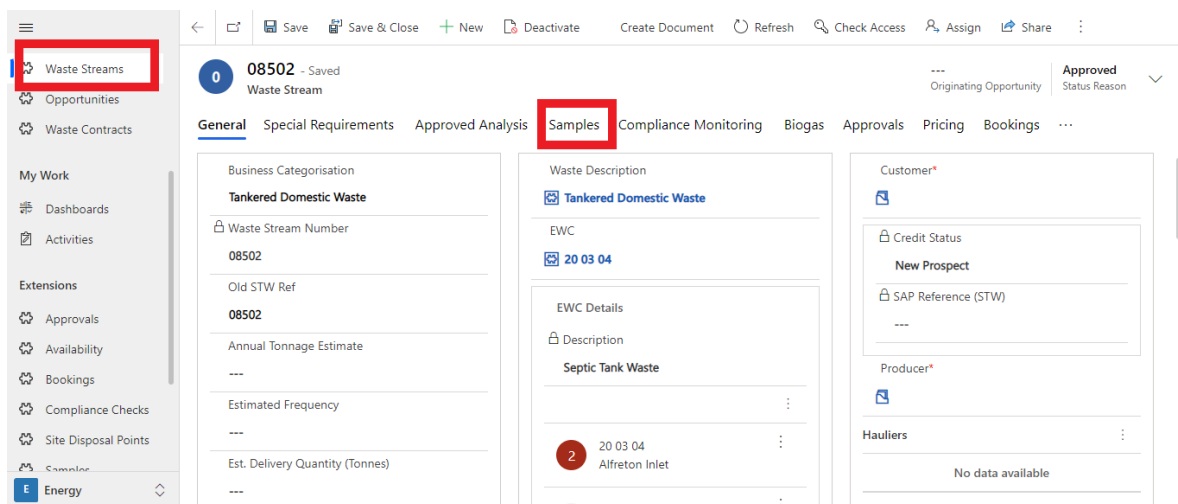

Image 2. Finding waste stream tab and sample tab in CWID

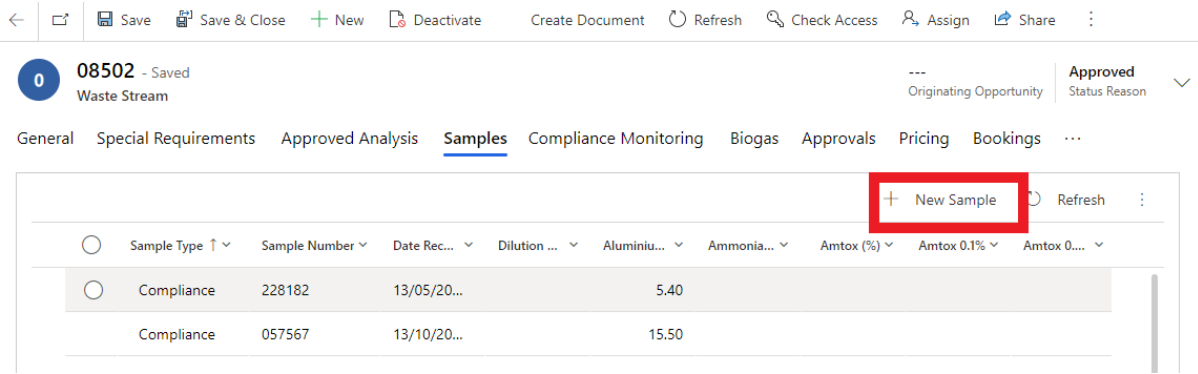

Image 3. Creating a new sample In CWID

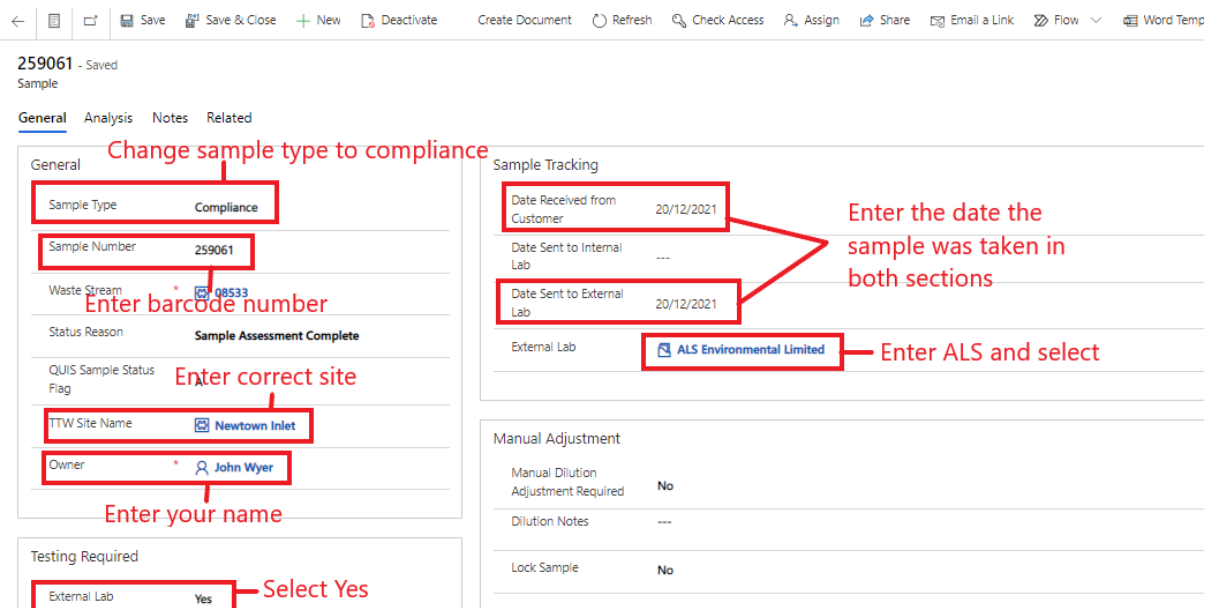

Image 4. Entering sample data into CWID

### Obtaining a TDW sample

Tanker drivers are obligated under the terms of their contract with Severn Trent Water to provide a sample of their load when requested. Some STW sites have a sniffer valve tap, which can be used to take the domestic sample (Image 5). The driver must connect the pipe to the tanker and release the valve. Tell the driver not to pressurise the tanker until they have logged in and the valve has opened to about 60%.

- Two litres of sample is required from each tanker. This can be poured into two 1 litre bottles until the tech is able to bottle up the sample for ALS. Label the bottles with the customer’s name and arrival time.
- Whilst wearing full PPE, wait about a minute after the tanker starts offloading and then place the bottle under the sniffer valve tap (see image 5) and slowly release the valve. Fill up two one-litre bottles
- If a sniffer valve is not available, the driver must get the sample from the tanker. ask the driver to mix the waste using their vacuum before taking the sample. This is to make sure you get a representative sample, and to minimise contamination from their last load.
- Give the driver the option of using either a clean bucket or the one-litre bottles when getting the sample.

- The tech can use a funnel to pour the waste into the one-litre bottles.

Image 5. Snifter valve tap

- If the sample is taken from the sight glass, the driver should flush the sight glass clear of any previous load and metal contamination prior to obtaining the official sample.
- Alternatively, the driver can take a sample from the inlet at the back of the tanker.
  - Ensure that the sample is not taken from the outlet because this may contain contamination from the last load.
- It is important to check the sample and make sure it is domestic/ toilet waste. For example, if the waste has any blue or artificial colouring, oil, diesel, grease, or lots of stones the waste is likely not to be domestic waste. If this occurs, do not allow the tanker to discharge. Phone the Process Manager, process advisors or the TTW manager. If they are not available a STW technician to report the potential illegal discharge by the customer.
- Once the sample has been taken and checked, and the technician is confident the sample is domestic waste, the remaining information can be entered into CWID as illustrated in image 4.

### Filling out an ARF

- Place one of the yellow stickers on the ARF in the top right box.
  - The second yellow sticker can be placed on the back of the stickers page and you can write the customer's name and date next to it. This can be kept for reference.
- Fill out the ARF as shown in image 6.
- The sampling point codes can be found in Table 1 below.
- The team ID for TDW is W42
- Place an X in Suite 705
- Take a photo in CWID of the ARF when completed

### Data Entry

- Complete the Domestic Waste Sampling tracker
- The Domestic Waste Sampling tracker in sharepoint or Teams (The spreadsheet can be accessed from the Enitial TDW sampling page or follow the link: [Domestic waste sampling tracker.xlsx](#)). You need to enter:
  - Name of site
  - Sample Point Code
  - Time of Arrival
  - Sampler/ Tech Name
  - Date sampled
  - Customer / Company Name

- Documentation check
- ALS Barcode Number
- Type of waste
- Colour
- Any Non-conformances found
- If there is a non-conformance, which tech was contacted
- Any comments – descriptions of non-conformance and explanation of how the problem was dealt with, any issues with taking the sample or complaints from customer.

## Preparing the Sample Bottles for ALS

- When there is a quiet period, start preparing the sample bottles for ALS. Prepare one sample at a time and wait until the sample preparation is completed before moving to the next sample, or dealing with a domestic waste tanker.
- Place a corresponding barcode on the bottles listed below, with the label lengthways so that it can be read by a scanner.

- 1 litre clear PET (STL13)
- phenol (STL070)
- cyanide(STL071)
- bromide(STL061)
- antimony (STL024)
- Sulphide (STL480)
- mercury(ALS026)
- HPLC Phenols (ALE 244-subcontracted)

Image 7. Sample bottles required for TDW

- Fill each bottle with the sample and if available place the bottles in a bubble wrap bag ready to take to the collection point
- At the end of the day the bottles should be taken to the collection point at a hub site. If the site being sampled is not a hub site the tech should travel to the closest hub site and drop the samples off. The distance and travel times are shown in Table 2.

## TDW Site Addresses and Sample Point Codes

Sewage Treatment Works	Address	Sample Point
Alfreton	Westhouses Rd, Alfreton, Derbyshire, DE55 7FF	88000100
