Hi Steve,

I have just picked up the above app and am going to run a pre-app ammonia screening this afternoon as one hasn't been completed yet.

Can you confirm the bird numbers the operator is applying for please. The modelling report appears to be for a higher number (460,500) than elsewhere in the application (400,500). Can you also clarify which houses scrubbers are proposed for please – again the modelling report, tech standards and non-tech summary state houses 6 to 9, whereas the proposed changes doc states houses 7 to 9. The SCR is also confusing, as it talks about 'relocation of house 7 and further 2 houses', but also about 'additional 4 houses', with 'air scrubbers on the 3 proposed houses':

| | |
|----------------------------------|--|
| <h3>4.0 Changes to Activity</h3> | Additional ground site boundary for 7 and a further an attenuation p Additional ground site boundary for poultry houses. Air scrubbing system proposed house |
|----------------------------------|--|

If you could clarify the above please and amend the docs as necessary, I would appreciate it.

Kind regards
Kate
