

Milber Salvage & Spares Ltd

Part C2

5C - Non Technical Summary

Milber Salvage & Spares Ltd have been operating with the same original permit that our father was issued with in 1996. We feel that this permit is now outdated therefore we would like to stay with this permit but change our annual tonnage and update the permit with modern conditions.

Our main reason for this change is due to the fact we would like to be able to increase our tonnage allowance. At present we are restricted to 1300 tonne per year we would like to change that to 5000 tonne per year. We feel this would enable us to accept more ELVs from the public so we would not need to turn people away and over the last 2 years we have made many changes to our site to be able to deal with the increase in scrap.
