Milber Salvage & Spares Ltd

Part C4

3a – Type of facility/operation we are applying for

We at Milber Salvage and Spares Ltd have been a waste operations site since our father started the business in 1996. We deal with ELV's. We fully depollute the vehicles that are brought to us by the general public, we bale the vehicles up and then send them off for recycling. We then sell some of the parts removed from the vehicles on as second hands parts to the general public and local garages. We have been working with the permit our father was issued with back in 1996 so we feel this is now outdated. We would like to keep our original permit that we have had in place but we would like to change the annual tonnage limit to 5000 tonne per year and to also update the permit to modern conditions.
