

## **Non Technical Summary**

### **Permit Changes**

Chenoweth's wish to add two additional waste codes EWC code 20-03-03 & 17-05-04 to their existing permit which is a standard rules permit. Street cleaning residues & soil and stones.

Existing permit EPR/FB3403FB. We understand that this variation will convert the permit into a bespoke permit.

It is not envisaged that overall tonnage capacity will be increased by the acceptance of these two codes over the current capacity limit of 75,000t/a.

Both codes are non hazardous and not combustible. The FPP has been reviewed as per email from the EA but obviously no changes made due to these two codes.

The EMS has also been updated to reflect dust risk assessment in the H1 risk assessment. This risk again is minimal over the current operation.

No other permit changes are to be made apart from the addition of these two codes.
