Dear Sir/Madam

Permit ref. Net Zero Teesside – Environmental Permit Variation Application

We are writing to apply to vary Environmental Permit EPR/PP3501LR issued in 2024 for the Net Zero Teesside Power Limited's Power Station and Carbon Capture Plant Installation. The variation is being made in order to align the existing Environmental Permit with the Installation that is currently being constructed.

The application is being made as a substantial variation to the carbon capture plant activity, and a normal variation to the power station activity, based on pre-application discussions with the Environment Agency (pre-application reference EPR/PP3501LR/P001). An electronic copy of the application documents, including the application forms A, C2, C3 and F1, and supporting reports has been provided in the email link.

The required electronic payment of £23,754 for the variation of the permit will be made received on 16th March 2026. The reference for the BACS payment is PSCAPPINSTNETZE01.

Net Zero Teesside Power Limited would like to thank the Environment Agency in advance for their anticipated support in determining the Environmental Permit determination, ready for commissioning to commence in Quarter 3 2027.

Yours faithfully

Helen Watson (R)
Associate
