Morning Steve.

Modelling files on their way.

For house 7 and 8 modelling was initially set up with 16,000 birds per house, but there are actually 32,000 per house proposed which wasn't realised until all modelling was completed, so results for housing (and ranging) on H7 and H7 are scaled by a factor of 2 as explained in footnote 2.

Regards,

Steve Smith.

Hi Steve

Couple of questions from the EA

9. Detailed ammonia modelling report

- a. In table 2 why have you scaled down the bird numbers in houses 7 & 8 and then multiplied by 2 at end. Please explain.
- b. Please provide the modelling input files.

Regards

Steve
